

1. It has been acknowledged by the Remediation NZ (RNZ) and the Taranaki Regional Council (TRC) there is a legacy issue relating to stockpiled waste of more than 20,000 tonnes that includes drilling waste.
 - (i) TEW are concerned with the Supplementary Statement of Evidence of David Gibson dated 19 March 2021 in response to remediating this material and the support of the applicants' experts of his response.
 - (ii) It is TEW's understanding that Mr Gibson is not an independent expert on this matter, neither are the applicants' experts, or myself. The applicant provided 1 page of information at the hearing relating to the proposed process which is not sufficient and does not allow submitters appropriate time to consider this.
 - (iii) TEW make the following comments:
 - a. TEW are concerned that the base sample tested (July 2020) is potentially not from the sample (4000m3) used in the study and that there are 6 months between the base sample tested and the study.
 - b. If it is agreed that the recommended limits of contaminants are appropriate as outlined in the Officers Report (see Attachment 1) then testing needs to demonstrate all contaminant limits can be met. The supplementary evidence of Mr Gibson does not show that the appropriate TPH levels have been reached or that the material has been tested for other contaminants including heavy metals.
 - c. Mr Gibson states "Greenleaf Environmental Services LLC uses a method of treatment involving enzymes followed by bio augmentation" and "RNZ took a sample of 4,000 m3 of product from Pad 3 and treated this with an enzyme and then bio remediated the sample". TEW are aware that synthetic drilling wastes (solid and liquid) have been accepted at the site (see Attachment 2). It is not clear how enzymes and bio augmentation will work on this material or the heavy metals mentioned in the previous point.

- d. TEW are concerned without further scrutiny through a resource consent process that the more than 20,000 tonne of waste including drilling waste will continue to be a significant legacy issue impacting on the site.

2. Taranaki Energy Watch (TEW) remains concerned with the fate of all of the drilling waste that has been received at the composting facility.

- (i) As outlined in our submission in 2019 there is Council documentation indicating that drilling waste was removed from the site.

“Remediation (NZ) Ltd operates a composting facility in the Haehanga Valley, Uruti. Raw materials are trucked to the site for composting, on purpose built composting pad for a period of 35-40 days. Synthetic hydrocarbon drilling muds and cuttings are also received on site. They are piled up and liquids are allowed to drain, then blended with green waste and other organic matter. Composted material is transported off site by trucks to RNZ’s worm farming operations at Waitara Road and Pennington Road.”¹

- (ii) TEW also seek assurance that the stockpiled waste includes all the drilling waste that remains on the site. TEW are concerned that there may be further drilling waste that has been moved elsewhere on the site that needs to be accounted for and included as part of the legacy issue to be resolved.

3. TEW are concerned that there are further hazardous substances potentially not compostable and requiring remediation that have been brought to the Uruti composting facility site.

- (i) In an Official Information Act request to TRC dated 16 February 2021 TEW requested all the registers since the renewal of consents in 2010 relating to conditions 3 and 5 respectively of Consent 5839-2.
 - a. “The acceptance of any other materials shall only occur if the Chief Executive, Taranaki Regional Council advises in writing that he is satisfied on reasonable

¹ Taranaki Energy Watch submission dated 11 February 2019 at paragraph 5 (ii) c. (ii).

grounds that the other materials will have minimal effects beyond those materials listed above.”

- b. “The consent holder shall record the following information in association with accepting all incoming material on site: a) the date and time that the material is accepted; b) description of the material; and c) the approximate volumes of material. The above records shall be made available to the Chief Executive, Taranaki Regional Council, on request.”

- (ii) Registers were provided since 2015-2016. It is not clear if earlier registers have been kept.
 - (iii) An inward goods register dated 2016 shows a considerable quantity of Methanex contaminated soil being bought to the Uruti composting facility (Attachment 3). There is no further information about the soil and whether it is contaminated with methanol and where it is at the site.
 - (iv) TEW are concerned that given the levels of non-compliance historically and recently demonstrated by the Company and the lack of registers provided there may be more hazardous substances at the site that have not been accounted for.
 - (v) This concern is further supported by an earlier OIA request and response received from the Council in 22 September 2020 that states the drilling wastes are “Estimated to be a combined 40,000 m3. Though this number is a conservative estimate, as 2005-2010 records are sparse.”
4. It is not clear why the Remediation NZ Uruti site is not included on the Register of Selected Land Use (RSLU) sites for sites contaminated with Hazardous Substances.
