

Policy and Planning Committee

Tuesday 3 September 2019

10.30am

Taranaki Regional Council, Stratford

Agenda for the meeting of the Policy and Planning Committee to be held in the Taranaki Regional Council chambers, 47 Cloten Road, Stratford, on Tuesday 3 September 2019 commencing at 10.30am.

Members	Councillor N W Walker	(Committee Chairperson)
	Councillor M P Joyce	
	Councillor C L Littlewood	
	Councillor D H McIntyre	
	Councillor B K Raine	
	Councillor C S Williamson	
	Councillor D N MacLeod	(ex officio)
	Councillor D L Lean	(ex officio)
Representative Members	Ms E Bailey	(Iwi Representative)
	Mr J Hooker	(Iwi Representative)
	Mr M Ritai	(Iwi Representative)
	Councillor P Nixon	(South Taranaki District Council)
	Councillor R Jordan	(New Plymouth District Council)
	Councillor G Boyde	(Stratford District Council)
	Councillor C Coxhead	(South Taranaki District Council)
	Mr P Muir	(Taranaki Federated Farmers)

Apologies

Notification of Late Items

Item	Page	Subject
Item 1	3	Confirmation of Minutes
Item 2	9	Government announcements on three waters review
Item 3	14	PEPANZ publication: Powering 2050: A vision for natural gas in New Zealand
Item 4	17	Update on Climate change policy announcements
Item 5	24	Regional freshwater recreational bathing water quality report for 2018-2019
Item 6	41	Bathing recreational water quality SEM report 2018-2019
Item 7	51	Submission on protecting Hector's Maui dolphins
Item 8	64	Coastal occupation charges
Item 9	71	Approval of Proposed Coastal Plan for Taranaki
Item 10	1677	Discussion document: Proposed National Policy Statement on Highly Productive Land

Closing Karakia and Karakia for kai

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

Subject: Confirmation of Minutes – 23 July 2019

Approved by: A D McLay, Director-Resource Management

B G Chamberlain, Chief Executive

Document: 2321517

Resolve

That the Policy and Planning Committee of the Taranaki Regional Council:

- a) takes as read and confirms the minutes of the Policy and Planning Committee meeting of the Taranaki Regional Council held in the Taranaki Regional Council chambers, 47 Cloten Road, Stratford, on Tuesday 23 July 2019 at 10.30am
- b) notes the recommendations therein were adopted by the Taranaki Regional Council on 13 August 2019.

Matters arising

Appendices

Document #2298795 – Minutes Policy and Planning Committee

Minutes of the Policy and Planning Committee Meeting of the Taranaki Regional Council, held in the Taranaki Regional Council Chambers, 47 Cloten Road, Stratford, on Tuesday 23 July 2019 at 10.30am.

Members	Councillors	N W Walker M P Joyce C L Littlewood B K Raine C S Williamson D L Lean	(Committee Chairperson) (via Zoom) (ex officio)
Representative Members	Councillors	G Boyde C Coxhead	(Stratford District Council) (South Taranaki District Council)
	Messrs	J Hooker P Muir	(Iwi Representative) (Federated Farmers Representative)
	Ms	E Bailey	(Iwi Representative) (from 10.40am)
Attending	Messrs	B G Chamberlain G K Bedford C L Spurdle G Severinsen R Phipps	(Chief Executive) (left meeting 11.20am) (Director-Environment Quality) (Planning Manager) (Manager Policy & Strategy) (Science Manager)
	Ms	J Mack	(Committee Administrator)
	Mrs	J Bielski	(Policy Analyst) (left meeting 10.45am)
	Mr	S Ellis	(Environment Services Manager) (11.05am-11.50am)
	Mr	J Clough	(Wrightson Consulting)
	One member of the media		
Apologies	The apologies from Councillors D N MacLeod (ex officio), D H McIntyre, Mr M Ritai (Iwi Representative), Mr P Nixon (South Taranaki District Council) and Mr R Jordan (New Plymouth District Council) were received and sustained.		
Notification of Late Items	There were no late items of business.		

1. Confirmation of Minutes - 11 June 2019

Resolved

THAT the Policy and Planning Committee of the Taranaki Regional Council

- a) takes as read and confirms the minutes and confidential minutes of the Policy and Planning Committee meeting of the Taranaki Regional Council held in the

Taranaki Regional Council chambers, 47 Cloten Road, Stratford, on Tuesday 11 June 2019 at 10.40am

- b) notes that the recommendations therein were adopted by the Taranaki Regional Council on 2 July 2019.

Raine/Hooker

Matters Arising

There were no matters arising.

2. Update on implementation of the National Policy Statement for Urban Development Capacity

- 2.1 Mr C Spurdle, Planning Manager, spoke to the memorandum to present an update on the implementation of the *National Policy Statement on Urban Development Capacity* (NPS-UDC) in the Taranaki region.

Recommended

That the Taranaki Regional Council:

- a) receives the third Quarterly Monitoring Report on Urban Development Indicators for the New Plymouth District;
- b) notes that the Housing and Business Development Capacity Assessment report and Future Development Strategy for New Plymouth will be published shortly
- c) notes that the NPS-UDC is currently being reviewed.

Boyde/Littlewood

3. Review of the Regional Air Quality Plan for Taranaki

- 3.1 Mr C Spurdle, Planning Manager, spoke to the memorandum seeking Members' agreement to proceed with an early review of the *Regional Air Quality Plan for Taranaki* in accordance with the First Schedule requirements of the Resource Management Act 1991 (the RMA), and combine the review of the Regional Air Quality Plan with the reviews of the Regional Freshwater Plan for Taranaki and the Regional Soil Plan for Taranaki..

Recommended

That the Taranaki Regional Council:

- a) notes that the Council is required by the RMA to commence a review of the Regional Air Quality Plan for Taranaki no later than July 2021
- b) agrees to commence a full review of the Regional Air Quality Plan for Taranaki in conjunction with the reviews of the freshwater and soil plans in accordance with the Schedule 1 requirements of the RMA

- c) agrees to the development and review of a combined regional natural resources plan that addresses the integrated management of air, land and freshwater resources
- d) approves the attached project brief entitled Review of the Regional Air Quality Plan for Taranaki and development of a combined regional plan
- e) notes that combining these plans is not anticipated to delay the public notification of a proposed plan addressing the Council's freshwater and soil conservation functions.

Raine/Littlewood

4. Regional Freshwater Ecological Quality: 2017-2018 results from state of the environment monitoring

- 4.1 Mr G K Bedford, Director-Environment Quality, spoke to the memorandum to present an update to the Committee on the latest annual results of the Council's state of the environment monitoring programme for fresh water ecological health (macroinvertebrate monitoring). A powerpoint presentation was also given by Mr Bedford.

Recommended

That the Taranaki Regional Council:

- a) receives this memorandum noting the preparation of a report into the state of and trends in regional in-stream macroinvertebrate community health data for Taranaki, for 2017-2018 and over the period 1995-2018
- b) notes the findings of the SEM programme
- c) adopts the specific recommendations therein.

Joyce/Muir

Ms E Bailey voted against the motion.

5. Aotearoa Deal for Nature

- 5.1 Mr C Spurdle, Planning Manager, spoke to the memorandum presenting for Members' information the *Aotearoa Deal for Nature* action plan.

Recommended

That the Taranaki Regional Council:

- a) receives this memorandum Aotearoa Deal for Nature
- b) notes the actions the Council is undertaking which support the protection and enhancement of biodiversity in Taranaki.

Joyce/Raine

6. Update on Towards Predator-Free Taranaki Project

- 6.1 Mr S Ellis, Environment Services Manager, spoke to the memorandum presenting Members with an update on the progress of the *Towards Predator-Free Taranaki* project. A powerpoint presentation was also included.

Recommended

That the Taranaki Regional Council:

- a) receives the memorandum Update on Towards Predator-Free Taranaki project
- b) notes the progress and milestones achieved in respect of the urban and rural predator control and the zero density possum projects of the Towards Predator-Free Taranaki project.

Raine/Littlewood

7. Ministry of Health: Annual report on Drinking-water Quality and update on Taranaki Drinking Water Joint Working Group and related matters

- 7.1 Mr G Severinsen, Manager Policy and Strategy, spoke to the memorandum to introduce the Ministry of Health's annual report on drinking-water quality for the 2017-2018 year and to provide a brief update for Members on the Taranaki Drinking Water Joint Working Group and the Government's review of Three Waters regulation following the Havelock North Drinking Water Inquiry.

Recommended

That the Taranaki Regional Council:

- a) receives the memorandum 'Ministry of Health: Annual Report on Drinking-water Quality and update on Taranaki Drinking Water Joint Working Group and related matters'; and
- b) notes that the Taranaki Drinking Water Joint Working Group has been formed and is working well.

Boyde/Littlewood

8. Report on Advocacy and Response Activities for the 2018/2019 Year

- 8.1 Mr G Severinsen, Manager Policy and Strategy, spoke to the memorandum reporting on advocacy and response activities for the 2018/2019 year.

Recommended

That the Taranaki Regional Council:

- a) receives the memorandum Report on Advocacy and Response activates for the 2018/2019 year
- b) notes that twenty-six (26) submissions were made during the year on the policy initiatives of other agencies
- c) notes that senior staff were also involved in various working parties or other fora on central and local government policy development and review projects.

Littlewood/Joyce

Closing Karakia Mr J Hooker (Iwi Representative) gave the closing Karakia to the Policy and Planning Committee and Karakia for kai (lunch).

There being no further business, the Committee Chairperson Councillor N W Walker, declared the meeting of the Policy and Planning Committee meeting closed at 12.05pm.

Confirmed

Chairperson _____
N W Walker

Date **3 September 2019**

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

Subject: Government announcements on three waters review

Approved by: AD McLay, Director – Resource Management
BG Chamberlain, Chief Executive

Document: 2311602

Purpose

1. The purpose of this memorandum is to update Members on recent announcements by the Government on the three waters review.

Executive summary

2. The Minister of Local Government, the Hon Nanaia Mahuta and the Minister of Health the Hon David Clark, have jointly released the Government's proposals for reform of the three waters and a timetable for their implementation.
3. Key features of the announcements include a dedicated water regulator; a new Water Services Bill; extending regulatory coverage to all water suppliers, except individual household self-suppliers; greater Central Government oversight of wastewater and stormwater services; and transitional arrangements of up to five years to allow water suppliers to adjust to the new regulations.
4. The functions of the new water regulator are wide ranging and include standards setting, compliance, monitoring, enforcement, and capability building. There are to be new and enhanced obligations on regional councils and water suppliers to manage risks to drinking water sources. Mandatory disinfection of all water supplies will be required with limited exemptions to apply in appropriate circumstances.
5. Regional councils will remain the primary regulators for environmental matters with respect to wastewater and stormwater discharges under the RMA, including compliance, monitoring and enforcement of consent conditions, but with stronger central government oversight. These will be overseen either by one central regulator or separate entities and is to be decided later in the year. The Government has yet to decide on whether to require the aggregation of drinking water suppliers.
6. Most of the reforms for the three waters will be implemented in a new Water Services Bill to be introduced by the end of the year with possible enactment by mid-2020.

Recommendation

That the Taranaki Regional Council:

- a) receives the memorandum '*Government announcements on three waters review*'.

Background

7. The three waters review began in mid-2017, and ran in parallel with the latter stages of the Havelock North Drinking Water Inquiry following the campylobacter outbreak in 2016. The initial findings of the review were consistent with many of the Havelock North Inquiry's findings but also raised broader issues about the effectiveness of the regulatory regime for wastewater and stormwater.
8. Members will recall having received at the last meeting of the Committee held on 23 July 2019, an update on the Government's review of three waters regulation (and other related matters). It was noted in the accompanying memorandum that no formal recommendations for changes to drinking water regulation or to wastewater or stormwater regulation had yet been announced.
9. A little over a week later on 31 July 2019 the Minister of Local Government, the Hon Nanaia Mahuta and the Minister of Health the Hon David Clark, jointly released the Government's proposals for reform of the three waters and a timetable for their implementation.
10. Key features of the 31 July 2019 announcements include:
 - a dedicated water regulator;
 - a new Water Services Bill;
 - extending regulatory coverage to all water suppliers, except individual household self-suppliers;
 - strengthened Government stewardship of wastewater and stormwater services, with regional councils remaining primary regulators for the environment; and
 - transitional arrangements of up to five years to allow water suppliers to adjust to the new regulations, if necessary with support from the new regulator.
11. The documents released in making the 31 July announcements, including Cabinet papers, can be found on the Department of Internal Affairs website <https://www.dia.govt.nz/Three-waters-review> . A media release can be found at <https://www.beehive.govt.nz/release/dedicated-watchdog-water-quality>

Discussion

12. A major feature of the announcements is the proposal to establish a new dedicated water regulator. The functions of the water regulator are to include sector leadership; standards setting; compliance, monitoring and enforcement; capability building; information, advice and education; and performance reporting. The scope, roles and institutional arrangements for the regulator, including whether to include all three waters within a single regulator, or separate bodies, will be the subject of further consideration later this year.

13. The new regulatory regime will extend regulatory coverage to all drinking water suppliers, except individual household self-suppliers.
14. The water regulator will be responsible for registration of drinking water suppliers and will be empowered to monitor and enforce compliance with drinking water standards.
15. There will be new and enhanced obligations on regional councils, territorial authorities and water suppliers to manage risks to drinking water sources. Regional councils will be required to contribute to the preparation of source water risk management plans to be developed and implemented by water suppliers and to report annual trends in source water quality and quantity. Regional councils will also be required to periodically assess the effectiveness of actions taken to manage risks to source waters. These changes are proposed to be given effect to through revisions to the NES for drinking water.
16. Further steps are to be taken to ensure a multi barrier approach to drinking water safety is implemented. This will include each supplier having a water safety plan that maintains the quality of drinking water in the distribution system. Mandatory disinfection of all water supplies will be required with limited exemptions to apply in appropriate circumstances.
17. The new regulatory regime is proposed to be implemented over a five-year period. This will allow water suppliers time to adjust to the new regulations with the support and assistance of the new regulator.
18. The proposals for wastewater and stormwater do not involve such significant changes from the status quo compared to those for drinking water.
19. Regional councils will remain the primary regulators for environmental matters with respect to wastewater and stormwater discharges under the RMA, including compliance, monitoring and enforcement of consent conditions. However, there will be stronger central government oversight of wastewater and stormwater regulation. In summary, it appears that these proposals will entail:
 - a new national environmental standard for wastewater discharges and overflows;
 - new obligations on wastewater and stormwater network operators to manage risks to people, property and the environment;
 - a new regulatory requirement for wastewater and stormwater network operators to report annually on a set of national-prescribed environmental performance metrics and compliance; and
 - the development of national guidance to improve the regulation and design of stormwater services.
20. These proposals will be progressed alongside the Ministry for the Environment's Essential Freshwater programme.
21. The proposals will be overseen by a central regulator but as noted earlier in this memorandum, the question of whether the regulation of all three waters will come within one regulator or separate entities, will be the subject of further Cabinet consideration later in the year.

22. Most of the reforms for the three waters will be implemented in a new Water Services Bill. The Bill will contain the suite of system-wide reforms to the regulation of drinking water and some aspects of wastewater and stormwater. The Government's aim is to introduce the Bill by the end of this year with possible enactment by mid-2020.

Implications of the announcements

23. The Government acknowledges it will be challenging for smaller drinking water suppliers to comply with the new regulatory framework. It intends to decide later in the year how to address the cost implications of complying with the regulatory regime, including whether financial help from central government needs to be provided.
24. It seems clear that some smaller councils, communities and many non-council supplies (including marae), will struggle to comply with the proposed reforms for drinking water. The Government has been made well aware of these issues during stakeholder engagement with local government, iwi/Māori and Crown agencies that provide three water services. Local Government New Zealand has already called for central government assistance to implement the proposed reforms.
25. There may be scope for smaller suppliers to work together and pool resources to achieve compliance with the new regime. In some cases this may be an efficient way of spreading the costs of compliance over a broader base. Taranaki water suppliers have a history of sharing expertise and working together for the benefit of the regional community.
26. The Government has still to make announcements on whether it intends to require aggregation of drinking water suppliers – an issue that has been raised earlier in the Government's review of three waters. However, the new compliance obligations create strong incentives for territorial authorities and other drinking water suppliers to aggregate voluntarily. Indeed, in the accompanying Cabinet papers the Minister of Local Government has indicated she has sought funding to support and incentivise regions to investigate collaborative approaches to water service delivery, noting that some local authorities have already responded positively to this approach.
27. With respect to wastewater and stormwater proposals, details have yet to emerge on what might be included in national environmental standards, the role of a central regulator and the responsibilities of regional councils. The Ministers have said that regional councils will remain the primary regulators for the environment, but that there will stronger central government oversight of wastewater and stormwater regulation.
28. This Council has indicated that it already has strong regulation of wastewater and stormwater discharges in Taranaki which are reported on regularly and which provide assurance that good environmental outcomes are being achieved. We will await further announcements with interest and remain hopeful any approaches are efficient, effective, and avoid duplication, and add value and not unnecessary cost for Taranaki ratepayers.
29. There are important implications for Māori in the three waters review. The Cabinet papers referred to at the beginning of this memorandum state that the Government is working to ensure the three waters regulatory reform proposals contribute to

upholding Te Mana o te Wai. Those papers go on to say that this will be done by strengthening how Te Mana o te Wai is reflected throughout the three waters system, and by aligning the Essential Freshwater and Three Waters reviews so that together they contribute to a holistic and integrated whole of system approach to water management.

Decision-making considerations

30. Part 6 (Planning, decision-making and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the *Act*.

Financial considerations—LTP/Annual Plan

31. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

32. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991* and the *Local Government Official Information and Meetings Act 1987*.

Iwi considerations

33. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

**Subject: PEPANZ publication: Powering to 2050:
A vision for natural gas in New Zealand**

Approved by: AD McLay, Director – Resource Management
BG Chamberlain, Chief Executive

Document: 2313586

Purpose

1. The purpose of this memorandum is to introduce a publication by the Petroleum Exploration and Production Association of New Zealand (PEPANZ) entitled '*Powering to 2050: A vision for natural gas in New Zealand*'.
2. The document can be viewed on the PEPANZ website at <https://www.pepanz.com/dmsdocument/113>

Executive summary

3. The publication '*Powering to 2050: A vision for natural gas in New Zealand*' outlines PEPANZ's vision for how natural gas can deliver 'affordable, reliable and sustainable energy for New Zealand into the future'.
4. It sets out a pathway to help New Zealand achieve net zero emissions by 2050 through the use of natural gas to replace coal, encourage electrification and create hydrogen using carbon capture and storage technology.
5. The document is clearly an advocacy tool for the petroleum industry but does raise some important issues and opportunities with respect to the role of natural gas in the transition to a low emissions economy.

Recommendations

That the Taranaki Regional Council:

- a) receives the memorandum '*PEPANZ publication: Powering to 2050: A vision for natural gas in New Zealand*', and
- b) notes the Taranaki region's natural gas resources have a role in the transition to a low emissions economy.

Background

6. The publication *'Powering to 2050: A vision for natural gas in New Zealand'* outlines PEPANZ's vision for how natural gas can deliver 'affordable, reliable and sustainable energy for New Zealand into the future'.
7. It sets out a pathway to help New Zealand achieve net zero emissions by 2050 through the use of natural gas to replace coal, encourage electrification and create hydrogen using carbon capture and storage technology.
8. The document notes that natural gas also provides a crucial back-up to New Zealand's electricity system that is readily available when renewable electricity sources are not sufficient. This back-up role helps keep electricity prices lower than they would otherwise be. It also describes how natural gas is used in a variety of other ways that does not involve burning it and releasing emissions, for example in producing methanol, fertiliser and a range of chemical products.
9. PEPANZ states that new discoveries could result in higher incomes, new jobs and substantial revenue for the Government.

Discussion

10. The document is clearly an advocacy tool for the petroleum industry with its call for long-term bi-partisan policies that allow for offshore exploration, appraisal, development and production of natural gas. Nonetheless, the document makes some interesting points that suggest that the wise use of natural gas could play an important role in the transition to a low emissions economy and have other important benefits for New Zealand in the long term.
11. For example, the report claims that discovering and developing new natural gas resources could speed up the transition away from coal, which is still widely used in New Zealand. It could also be exported overseas as LNG to countries in Asia making a significant contribution to reducing global emissions by displacing higher emitting sources.
12. The report also claims that the switch from coal to natural gas is the major reason why emissions in the USA and UK have fallen to their lowest level since the nineteenth century. As a result the demand for natural gas is 'booming' around the world and 'is widely seen as cleaner, affordable and reliable fuel source of the future' (page 6).
13. The document touches on other potential benefits such as using natural gas to produce hydrogen, encouraging electrification and keeping electricity prices affordable.
14. It suggests that the Government should encourage and enable the offsetting and capture of emissions from the use of natural gas and should also consider a sovereign wealth fund (similar to Norway) to invest the proceeds from development for future generations.
15. The collation Government has made a decision not to issue any new offshore mining permits. The decision for onshore permits is pending. These decisions will negatively impact the nation's gas resource and the ability to sustainably transition to a low

carbon economy. It is widely recognised any new large gas fields will be in the offshore area rather than onshore.

16. The Taranaki community and local government, and local and national gas users will watch with interest the outcome of planned exploration drilling in the EEZ under existing mining permits, particularly off the west coast of the North Island by OMV. If a discovery is made this could be important for New Zealand's energy supply and security, and in turn the ability to use gas to transition to a low carbon economy.

Decision-making considerations

17. Part 6 (Planning, decision-making and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the *Act*.

Financial considerations—LTP/Annual Plan

18. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

19. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991* and the *Local Government Official Information and Meetings Act 1987*.

Iwi considerations

20. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

21. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

Subject: Update on climate change policy announcements

Approved by: AD McLay, Director – Resource Management
BG Chamberlain, Chief Executive

Document: 2307826

Purpose

1. The purpose of this memorandum is to update Members on recent climate change policy announcements by the Government.

Executive summary

2. Three major announcements have occurred over the past one to two months on climate change matters. The first announcement was on 16 July 2019 when the Government released the Interim Climate Change Committee's (ICCC's) report on agricultural emissions and renewable energy.
3. The second was on 31 July 2019, and concerned further changes to the New Zealand Emissions Trading Scheme (NZ ETS) while the third, was announced on 3 August 2019 when the Government released its decisions on the Productivity Commission's Low Emissions Economy report.
4. On agricultural emissions, the ICCC concluded that the best way to reduce livestock emissions was to price them through a farm levy or rebate scheme. However, a farm-level levy/rebate scheme could not be fully implemented until 2025, and if this proved unfeasible, emissions should be priced at processor level through the NZ ETS. The Government has consulted on the options for agriculture and decisions are expected in September.
5. With respect to renewable electricity, the ICCC recommended that the Government should prioritise accelerated electrification of transport and process heat over the goal of achieving 100% renewable electricity by 2035.
6. The latest changes to the New Zealand Emissions Trading Scheme (NZ ETS) are designed to drive emissions reductions in industry and to incentivise increased emissions offsets through new forestry plantings. With respect to industry, phasing

down of industrial allocation will begin at 1 per cent per year from 2021-2030, then at 2 per cent from 2030-2041 and at 3 per cent per year from 2041-2050.

7. The main change in relation to forestry is the introduction of a simplified carbon accounting approach aimed at incentivising the planting of new forests. This is also seen as providing emitters with more opportunity to offset their emissions.
8. The Government's response to the Productivity Commission's report on a low emissions economy agrees with, or agrees to investigate the majority of the recommendations in the Commission's report. These cover key sector policies in land use, transport, electricity, industrial and process heat, the built environment and waste, as well as system and institutional aspects.
9. There are no direct implications for the Council's statutory functions or responsibilities arising from the Government's latest announcements but there will be a number of flow-on effects.

Recommendation

That the Taranaki Regional Council:

- a) receives the memorandum '*Update on climate change policy announcements*'.

Background

10. Three major announcements have occurred over the past one to two months on climate change matters. The first announcement was on 16 July 2019 when the Government released the Interim Climate Change Committee's report on agricultural emissions and renewable energy.
11. The second was on 31 July 2019, and concerned further changes to the New Zealand Emissions Trading Scheme (NZ ETS) while the third, was announced on 3 August 2019 when the Government released its decisions on the Productivity Commission's Low Emissions Economy report.

Report of the Interim Climate Change Committee

12. The Interim Climate Change Committee (ICCC) was established in mid-April 2018 to provide advice to the Government on two matters. The first was how agricultural emissions of methane and nitrous oxide might be best arranged to enter into the NZ ETS and meet New Zealand's emissions reduction targets for 2050 and the second, was what steps might be taken in planning for the transition to 100% renewable electricity by 2035.
13. The ICCC's report was released on 16 July 2019 along with details of how the Government plans to respond to its recommendations.

Agricultural emissions

14. On agricultural emissions, the ICCC concluded that the best way to reduce livestock emissions was to price them through a farm levy or rebate scheme. This was seen as a simpler and less costly approach than including all farms in the NZ ETS and would

avoid the need for farmers to trade emissions units. However, a farm-level levy/rebate scheme could not be fully implemented until 2025, and if this proved unfeasible, the Committee recommended that emissions be priced at processor level through the NZ ETS.

15. In the interim, the ICCC has recommended pricing livestock and fertiliser emissions at processor level via the NZ ETS with 95% free allocation, an action plan for implementing farm-level pricing and the recycling of funds (estimated at \$47 million per year) back into farming. This would be to support the sector in measuring emissions at the farm-level and to identify ways in which to reduce or manage on-farm emissions.
16. Farming leaders have proposed an alternative sector-led approach with central government endorsement that would have the agricultural sector develop a programme of action to support emissions reductions at farm-level and progress on implementing farm-level pricing by 2025.
17. The Government has consulted on the ICCC's recommendations and on the farming sector's option. Decisions are expected by the Government in September. If the decisions require changes to the Climate Change Response Act these will be included in the Climate Change Response Amendment Bill for NZ ETS improvements expected to be enacted by early 2020.

Renewable electricity

18. With respect to renewable electricity, the ICCC recommended that the Government should prioritise accelerated electrification of transport and process heat (steam, hot water or hot gases used in industrial processes) over the goal of achieving 100% renewable electricity by 2035.
19. This strategy was preferred because electricity generation is responsible for less than 5% of New Zealand greenhouse gas emissions whereas fossil fuels used in transport and process heat accounts for about 30%. Accelerated electrification of these two sectors would result in greater greenhouse gas reductions than achieving 100% renewable electricity, while also keeping electricity prices affordable.
20. The ICCC proposes that a target of electrifying 50% of New Zealand's vehicle fleet by 2050 is ambitious but achievable. They also conclude that electrifying a significant proportion of process heat is technically possible but it will be essential that electricity remains affordable and regulatory barriers to electrification are addressed.
21. The ICCC's report recognised that there would be additional demand for electricity if we are to reduce our greenhouse gas emissions and was very conscious of the potential effect of their recommendations on the affordability of electricity for all New Zealanders, particularly those in low-income households. It made a number of additional recommendations concerning valuing hydropower when decisions on freshwater are made, investing more in wind generation and ensuring that the regulatory system is responsive to climate change needs.
22. The Government has accepted the recommendations of the ICCC on accelerated electrification and has indicated work is already underway on a number of the recommendations or would be investigated further.

23. The ICCC's reports and recommendations plus media releases can be found at <https://www.iccc.mfe.govt.nz/>

Further changes to the Emissions Trading Scheme

24. The recently announced changes to the NZ ETS are part of an ongoing programme to make the ETS function as intended. The latest changes are designed to drive emissions reductions in industry and to incentivise increased emissions offsets through new forestry plantings. Changes to the ETS are expected to be enacted by early 2020.

Industry

25. The changes set out how the Government will reduce free allocations to major industrial emitters (which was envisaged when the ETS was first created in 2008) so as to incentivise reductions in emissions. The intention is that this will encourage innovation in lower emission production.
26. The Government has consulted with stakeholders and has said that the phasing down of industrial allocations will provide industry with the clarity and certainty that they have been asking for over timeframes that will allow businesses and communities to adjust. The plan is to begin phasing down industrial allocation at 1 per cent per year from 2021-2030, then at 2 per cent from 2030-2041 and at 3 per cent per year from 2041-2050.
27. The Government is aware that some industries face international competitiveness pressures which is why they have said that the Climate Change Commission will review the phase-down rates and advise governments on appropriate allocations if technology, economics, or the global situation changes.

Forestry

28. With respect to forestry, the main change is the introduction of a simplified carbon accounting approach aimed at incentivising the planting of new forests. This is also seen as providing emitters with more opportunity to offset their emissions.
29. An average accounting system will mean that if landowners or foresters want to convert ETS registered forested land to another use they can now do this without paying back emissions units, as long as they plant a forest elsewhere with the same carbon storage. For forests under the current carbon stock accounting system, any deforestation means surrendering emissions units they have earned, even if a new forest is established elsewhere.
30. In addition, the changes mean that landowners or foresters using average accounting will not have to pay back emissions units after adverse events such as forest fires or extreme winds, if the affected area is re-established within four years.
31. However, the Government has decided that forests registered before 2019 will not be able to transition to average accounting. The logic behind this is that averaging is primarily intended to encourage new forests because they make the biggest contribution to reducing carbon. There is also an issue with managing the volume of carbon units entering the market to maintain a stable price to drive emissions

reductions. This decision is to be reviewed in 2021 once there is a better understanding of how the carbon market will be affected and the resulting costs.

32. Further information on recent changes to the Emissions Trading Scheme in relation to industry can be found on the Ministry for the Environment's website <https://www.mfe.govt.nz/climate-change/proposed-improvements-nz-ets> and for forestry, on the Ministry for Primary Industries website <https://www.mpi.govt.nz/protection-and-response/environment-and-natural-resources/emissions-trading-scheme/emissions-trading-scheme-reviews/>

Decisions on Productivity Commission's Low Emissions Economy report

33. In August 2018, the New Zealand Productivity Commission completed its inquiry into transitioning New Zealand to a low-emissions economy. Members will recall that the Council made a submission on the Commission's draft report.
34. The Commission made 77 recommendations covering the following actions:
- Establish a comprehensive and durable climate change policy framework;
 - Reform the New Zealand Emissions Trading Scheme;
 - Devote significantly more resources to low-emissions innovation and technology; and
 - Create a suite of other policy reforms to help drive the transition including introducing emissions standards for newly registered vehicles, a feebate scheme to accelerate the uptake of EV's, and mandatory climate-related financial disclosures.
35. On 3 August 2019, the Government released a Climate Action Plan in response to the Productivity Commission's report – see media release at <https://www.beehive.govt.nz/release/government-announces-climate-action-plan>
36. The Climate Action Plan agrees with, or agrees to investigate the majority of the recommendations in the Productivity Commission's report.
37. The Government's response recognises key sector policies that will drive the transition, for example in land use, transport, electricity, industrial and process heat, the built environment and waste. In addition, four 'system settings' were identified as being necessary to support the transition. These were in the areas of innovation, laws and institutions, investment and emissions pricing.
38. The Government's decisions target low-emissions vehicle uptake, tree planting grants and strengthening the ETS to provide greater financial incentives to plant forests. They also signal significantly increased investment in research and development in reducing emissions from the agricultural sector, among a number of other specific initiatives.
39. In terms of system settings, the Zero Carbon Bill gets a special mention, alongside the establishment of an independent Climate Change Commission, the acceleration of low emissions investment and changes to emissions pricing, among others.
40. Further details on the Government's decisions on the Productivity Commission's report can be found at <https://www.mfe.govt.nz/productivity-commission-report-government-response>.

Implications for the Council

41. There are no direct changes to the Council's statutory functions or responsibilities arising from the Government's latest announcements.
42. However, there will be flow-on effects, for example arising from the Government's confirmation that there will be a Climate Change Commission established and that advising and planning for adaptation to climate change will be a core responsibility of the Commission.
43. Flood risk is one area where regional councils are likely to be called on to do more and the sector has been proactive in seeking central government co-investment in river management for flood protection in light of climate change projections and the increased risks to the economy, communities and assets. A report on this issue was considered at the last full Council meeting on 13 August – see <https://www.trc.govt.nz/assets/Documents/Meetings/Ordinary-Council2019/Ord1308-web.pdf>.
44. Changes to the ETS with respect to forestry may also see greater incentives for land owners and foresters to establish new forests and coupled with grants, may have benefits for this Councils sustainable land management and water quality programmes. Final announcements on agriculture may also see some changes in this sector which may impact on stocking rates etc.
45. A number of other announcements will have less direct impact but will still be a factor for Council consideration in its day-to-day operations, for example the intention to accelerate the uptake of electric vehicles.

Decision-making considerations

46. Part 6 (Planning, decision-making and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the *Act*.

Financial considerations—LTP/Annual Plan

47. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

48. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991* and the *Local Government Official Information and Meetings Act 1987*.

Iwi considerations

49. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

50. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Agenda Memorandum

Date 3 September 2019

Memorandum to
Chairperson and Members
Policy and Planning Committee

Subject: Regional freshwater recreational bathing water quality report for 2018-2019

Approved by: G K Bedford, Director-Environment Quality

B G Chamberlain, Chief Executive

Document: 2316739

Purpose

1. The purpose of this memorandum is to update the Committee on the 2018-2019 bathing season results from the 'state of the environment' programme that monitors freshwater contact recreational water quality. The full report (*Freshwater contact recreational water quality at selected Taranaki sites State of the Environment Monitoring Report 2018-2019, Technical Report 2019-01, September 2019*) is available upon request, and will be published on the Council's website following this meeting. This memorandum summarises the report's data and results, and the Executive Summary and recommendations from the report are attached as an appendix.

Executive summary

2. The Council's *Regional Freshwater Plan for Taranaki* recognises point source and diffuse source discharges of contaminants to surface freshwater as a significant resource management issue. The Council seeks to manage the quality and effects of such discharges through consents (for point sources) and programmes such as riparian exclusion and plantings (diffuse sources). Progressive improvement in in-stream water quality is achieved as consent conditions are made more rigorous, and as land managers undertake new fencing and planting.
3. The Council's State of the Environment monitoring programmes includes a programme to monitor the state and any changes in the state of the recreational quality of the region's lakes and rivers that are used by the community for recreation.
4. The latest report (for summer 2018-2019) is available upon request, and the Executive Summary of the report is attached to this memorandum as an appendix, for Members' information. Sixteen sites were monitored for bacteriological quality. Nine of these sites are also monitored for benthic cyanobacteria ('slime') as well. Two lake sites were monitored for both bacteriological quality and planktonic cyanobacteria (floating algal 'blooms')- Lake Opunake, and Lake Ratapiko, while Lake Rotokare was monitored solely for planktonic cyanobacteria. In the year under review, there were further

investigations conducted at designated bathing sites into particular sources of bacterial contamination at several sites.

5. Sampling frequency is increased to weekly at the region's most popular sites, including within the Christmas-New Year holiday period, with the additional sampling being undertaken regardless of weather. The core scheduling is referred to as 'SEM' samples and the additional sampling as 'MfE' sampling. There was little difference in the two datasets in the year under review.
6. Bacterial levels were somewhat higher than in long-term patterns in the season under review, although the same as those in the previous year. There were 43 samples altogether in the 'Action' category. Almost half of the 'Action' level samples arose at just two sites- lower Waiwhakaiho and lower Te Henui. These exceedances were due to resident wild fowl populations in the vicinity, and there is increasing bacterial contamination at these two sites. The Waiwhakaiho River fell from 94% compliant at Merrilands Domain, in upper urban New Plymouth, to 30% compliant adjacent to Lake Rotomanu, just above its mouth. At most of the other Taranaki freshwater contact recreational sites, it is almost always isolated events rather than general seasonal quality that give rise to exceedances of guidelines.
7. A notable increase over last year in the frequency of exceedances of the MfE 'Action' guideline occurred at Lake Opunake, while there was a notable improvement in the Waingongoro River at Eltham camp.
8. Five of the 16 sites remained below the Ministry for the Environment's 'Action' level at all times during the season, the same number as in the 2017-2018 season. Another 2 sites had only one non-compliance during the season, while a further two sites had 2. Twelve of the 16 sites had at least 75% of their samples below the 'Action' grade throughout the entire season. In terms of guideline attainment, the top five sites for water quality in the 2018-2019 season were:
 - 1= Patea River at boat ramp, Patea
 - 1= Lake Ratapiko
 - 1= Urenui River at estuary
 - 1= Manganui River at Everett Park
 - 5 Waingongoro River at Eltham camp.

Lake Rotomanu dropped out of the top 5 from last year, while the Waingongoro River at Eltham camp has come into the list.
9. The Council's 2012-2022 *Long-Term Plan (LTP)* has as a target for microbiological quality in inland waters, the *maintenance or increase in the number of sites compliant with the 2003 Ministry of Health contact recreational guidelines* (with 2003-2004 as the baseline year). Out of the 11 inland bathing sites that have been monitored in both seasons, 6 were fully compliant in 2003-2004, but only 3 in 2018-2019 (cf 2 in 2017-2018). There has been a very large increase in non-compliant samples at the mouth of the Te Henui Stream (from 4 in 2003-2004 to 11 in 2018-2019, out of 13 samples), and smaller but still significant increases for the Kaupokonui River and the Timaru Stream.
10. Cyanobacteria blooms were recorded at Lake Rotomanu over two months from mid November (a shorter duration than in the previous season), and at Lake Rotokare in December and January. Only low levels of planktonic cyanobacteria were found in the other lakes monitored. Benthic (streambed) cyanobacteria were found occasionally in

most of the nine rivers and streams monitored. Warning signs were posted at the mouth of the Kaupokonui River when the 'Action' level for exposed mats of cyanobacteria was exceeded in November, to avoid potential risk to children or dogs (who seem drawn to the odour of exposed mats but are then adversely affected by toxins if present within the cyanobacteria).

11. While the regional riparian programme and diversion of farm dairy effluent to land will have significant benefits for reducing bacteriological contamination of waterways in the long term, through reducing faecal deposition directly into waterways or on stream banks and through increasing the interception and attenuation of runoff, the significant variations in results in the last decade point also to more immediate meteorological and hydrological as well as longer term land management and farming practice influences showing through.
12. Over the long term, there are clear indications of deteriorations in the Te Henui Stream and the lower Waiwhakaiho River. In both cases waterfowl are the source of microbial pollution.
13. The Ministry for the Environment released a report in 2013 (*'Suitability for swimming'* July 2013 INFO 690), which focused solely on the grading system used by MfE and the Ministry of Health to indicate the presence of risk factors at swimming spots. The Council has repeatedly expressed its disappointment that this system, which does not take into account the state of water as revealed by day to day monitoring, has from time to time been given so much emphasis, as also its mis-interpretation (e.g. '60% of NZ's waters unsafe to swim in') by the media. However, it is also acknowledged that in this publication at least, MfE noted that the suitability for recreation criteria:
 - do not represent an accurate picture of water quality in the catchment;
 - reflect a precautionary approach to managing health risk;
 - are not designed to represent health risks on a particular day;
 - tend to reflect the poorest water quality measured at a site rather than the average water quality;
 - a site may be graded as poor but still be suitable for swimming much of the time; and
 - do not replace the site-specific information available on council websites.¹
14. The Council was previously required to give effect to the *National Policy Statement for Freshwater Management 2014* (NPS-FW) by implementing measures 'to safeguard.... (b) the health of people and communities, **at least as affected by secondary contact with fresh water**; in sustainably managing the use and development of land, and of discharges of contaminants'. This was colloquially described as ensuring at least a 'wadeability' quality in all water bodies. In 2017, the Government amended the recreational criteria to create four separate 'swimmability' criteria. All major water bodies (regardless of whether they include recognised freshwater recreational sites) are regarded as having to meet all four 'swimmable' criteria simultaneously. All four criteria have to be applied to data regularly collected year round, regardless of flow. While the Council's summer monitoring programme does not provide data collected according to this protocol (the Council's separate year-round water quality programme provides data that is assessed by the Council to determine regional 'swimmability'), the report presented today provides a comparable analysis for interest. Of the 17 recognised

¹ *Suitability for swimming: Indicator update July 2013: INFO 690*, Ministry for the Environment

freshwater recreational sites in Taranaki, when considering samples collected over the last five years under conditions suitable for recreation, 7 sites satisfy all 'swimmability' criteria, and another 3 fail only one of the four criteria.

15. In terms of promoting a 'one-stop shop' in public awareness of available guidance on water quality and suitability for recreational use, the Council now promotes the regional councils' LAWA website as the preferred source of national data on water quality and other environmental metrics. Data from the Council is uploaded automatically to the LAWA website as soon as it is available.
16. In terms of responsibility for advising the public on public health aspects of water quality, during 2016 the Council discussed with the district councils and the Medical Officer of Health the messaging that each agency should be providing to the public. As a result, it was agreed that the TRC website would direct all web enquiries around 'Can I swim here?' to the websites of the Taranaki District Health Board (TDHB) and district councils, where public health-based interpretation of water quality data would be provided and any advisory notification posted. During 2018-2019, there were 922 page views of the freshwater quality data on the Council's individual freshwater bathing sites pages, up by 8% on the previous year's 854 (which was itself an increase of over 270% on the previous year). The figures do not include anyone viewing the environmental data map only on the Council's home page, or anyone viewing the Council's monitoring data on the LAWA website. On 11 December the Council posted a story on its Facebook page promoting use of the website for accessing information on bathing water quality. This posting had a high level of delivery (a reach of 16,386) and engagement (2,549 interactions).
17. The Council's intentions re the completion of the regional riparian management programme and the diversion of the remaining dairy effluent treatment system discharges from streams to land will serve to reduce bacterial loadings on our streams. The finding of the 2018 study by NIWA² into the outcomes of the riparian programme, that there has been a meaningful reduction in bacterial loadings in the waterways of the ringplain correlated with the progressive implementation of the programme, is noted.

Recommendations

That the Taranaki Regional Council:

- a) receives the memorandum noting the preparation of the report *Freshwater Contact Recreational Water Quality at selected Taranaki sites SEM Monitoring Report 2018-2019, Technical Report 2019-01*; and
- b) adopts the specific recommendations presented in Technical Report 2019-01.

Background

18. Section 35 of the Resource Management Act requires local authorities to undertake monitoring of the region's environment, including land, soil, air, and fresh and marine

² Analysis of stream responses to riparian management on the Taranaki ring plain, NIWA client report 2018051HN, prepared for Taranaki Regional Council, March 2018

water quality. Monitoring is undertaken to identify pressures upon the regional resources, their state, changes in their state (i.e. trends), and the effectiveness of the policies and actions undertaken to maintain and enhance the environment.

19. The Regional Fresh Water Plan for Taranaki contains objectives to manage the state of the region's surface freshwater. Objective 6.2.1 requires the Council and region '*to maintain and enhance the quality of the surface water resources of Taranaki by avoiding, remedying or mitigating the adverse effects of contaminants discharged to land and water from point sources*', while Objective 6.3.1 is an equivalent objective for diffuse sources of contaminants.
20. In Section 10.3 of the Plan, the Council commits to continued monitoring, research and investigations related to fresh water quality, to provide information on the state of fresh water in the region and the effectiveness of the Plan.
21. Section 4 of the RFWP recognises that iwi seek the recognition of the values of water and protection of the mana, mauri, and wairua of waterways against contamination; maintenance of the quality of water for its ability to provide mahinga kai; and respect for wāhi tapu and other areas or resources that have special significance.
22. The Council's 2018-2028 LTP has, under the 'Levels of service' specified for resource management, a commitment to '*maintain and enhance overall water quality in our rivers and lakes, groundwater and coastal waters*'. The measure for this activity is: '*parameters that characterise the physical, bacteriological, biological and chemical quality of surface water*'.
23. The Taranaki Regional Council initiated freshwater contact recreational water quality monitoring at a number of designated sites as part of Council's state of the environment monitoring (SEM) in 1996. The on-going programme is designed to annually monitor the bacteriological quality of lakes, rivers and streams at popular contact recreational sites. This work is undertaken principally for state of the environment purposes, measuring the current condition of the sites and looking for any trends as indicators of pressures, but the results are also compared with various contact recreational guidelines as a means of providing perspective on the significance of the results.
24. Monitoring is scheduled to be carried out from early November to the end of March (ie the bathing season), but can extend to April, depending on weather conditions.
25. Freshwater contact recreational water quality monitoring measures the number of bacteria in the sampled water. The designated indicator bacterium is *E.coli*. Sampling is undertaken according to documented Council procedures, which includes avoidance of elevated river flow conditions.
26. The proposed programme for each year is workshopped with staff of the three district councils and the TDHB - Health Protection Unit prior to the start of each season, results are reported as soon as available on the Council's website throughout the season, and a full report on all results and findings presented to and discussed with each of the other agencies at the completion of the season.

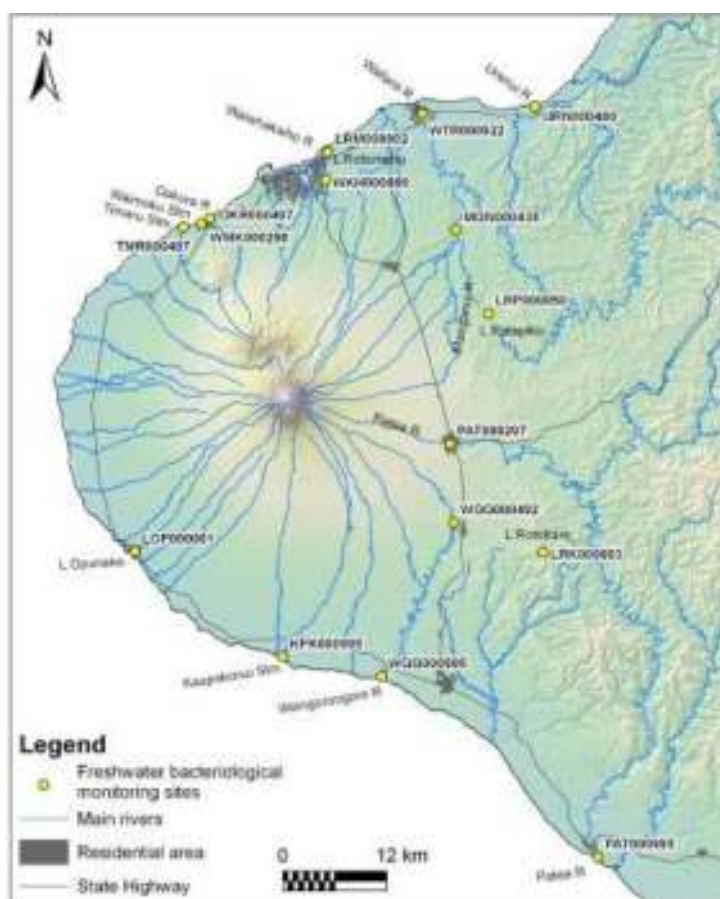

Figure 1 Location of freshwater contact recreation survey sites in 2018-2019

Discussion

Programme description

27. This report examines the bacteriological quality of 16 popular freshwater recreational locations in the region for the 2018-2019 bathing season. It was the twenty-third such annual survey. Some of the sites have been added during the programme's lifetime, in response to concerns over cyanobacteria and as changes in access have meant new sites have become more popular. Sampling was completed within the period of early November to mid March, with an increased frequency at popular sites from mid December to mid March, in recognition of greater usage during this period especially during public holidays.
28. Sample test results were compared with the Ministry for the Environment's (MfE) *Microbiological Water Quality Guidelines for Marine and Freshwater Recreational Areas* (2003). These guidelines are developed to apply to high-contact uses of water used intensively for recreational purposes, but are applied by the Council to each of the freshwater recreational sites without differentiation as to risk e.g. sites where there is paddling or kayaking or children playing in or near the water are treated the same as sites where there is repeated full immersion of swimmers' heads through activities such as diving or body-surfing rapids. The guidelines note a potential health hazard 'when the water is used for recreational activities such as swimming and other high-contact water sports. In these activities there is a reasonable risk that water will be swallowed, inhaled (Harrington et al 1993), or come

in contact with ears, nasal passages, mucous membranes or cuts in the skin, allowing pathogens to enter the body’.

29. The sites have also been graded for recreational suitability according to MfE, 2003 guidelines, based upon the immediately preceding five seasons of monitoring data (where such data existed). In addition, the Council assesses sites using the Ministry’s ‘Suitability for recreation’ (SFRG) criteria that base grades on surrounding land use. In doing so, it emerges that although most of the sites’ SFRGs suggest possible high risks associated with contact recreational usage, those SFRG gradings have been dictated by the agricultural nature of all catchments (meaning the sites are inevitably rated poorly regardless of proven quality). SFRG gradings for the 5 years to 2019 are given in the report.
30. For the last three years, the reports also referenced the *National Policy Statement for Freshwater Management 2014* (NPS-FW), which required that the Council, in giving effect to the NPS, is ‘to safeguard.... (b) the health of people and communities, **at least as affected by secondary contact with fresh water**; in sustainably managing the use and development of land, and of discharges of contaminants’ (Objective A1 for Water Quality, emphasis added). This was colloquially described as setting a ‘wadeability’ standard for all water bodies. In 2017 the NOF was amended to include 4 criteria in respect of primary recreation, or ‘swimmability’. The NOF requires that a site be categorised on the basis, not of the typical water quality, but from the worst results obtained at any time across any of the criteria throughout the record of monitoring. While these amendments do not include a specific ‘national bottom line’, the previous government announced its intention that 90% of all ‘swimmable’ waters in New Zealand should be within the top 3 of the 5 new categories. The current government’s position on this intention is not clear.
31. In general, these approaches indicate shortcomings in the grading systems that are based upon landuse/perceived impacts, or a precautionary interpretation of monitoring data other than actual exceedances, rather than basing gradings upon actual monitoring data measured throughout the bathing seasons. The results of the Council’s contact recreational water quality programmes confirm that gradings do not reflect the recreational water quality experienced by recreational users and therefore it is suggested by Council officers that they are not appropriate to be used or relied upon to provide any statement about how safe water actually is for recreational purposes. They show only susceptibility, and predominantly reflect perceptions and suppositions about how some land uses might influence quality, as designated ‘risk factors’. It is the view of the Council that when there is regular and systematic testing of the actual quality, those results reflect actual levels and are far more informative and meaningful to recreational water users. The Council emphasises the importance of results of systematic and timely on-going testing and reporting of actual contact recreational water quality.
32. It is noted that the Ministry for the Environment acknowledges that the SFRG ‘*reflects a precautionary approach to managing public health risks and does not represent an accurate picture of water quality in the catchment. ... The grades reflect a precautionary approach to managing health risk and are not designed to represent health risks on a particular day. They tend to reflect the poorest water quality measured at a site rather than the average water*

*quality. A site may be graded as poor but still be suitable for swimming much of the time....The indicator does not replace the site-specific information available on council websites.'*³

33. In terms of access to a 'one-stop shop' for public awareness of available guidance on water quality and suitability for recreational use, the Council has in the last few years promoted the LAWA website as the preferred source of national data on water quality and other environmental metrics. The LAWA website has been set up and is supported by all regional councils across New Zealand, as a 'one stop shop' for the public to use to access environmental data. Data from the Council is uploaded automatically to the LAWA website as soon as it is available.
34. In terms of responsibility for advising the public on public health aspects of water quality, during 2016 the Council discussed with the district councils and the Medical Officer of Health the messaging that each agency should be providing to the public. As a result, it was agreed that the TRC website would direct all web enquiries around the question of 'can I swim here?' to the websites of the TDHB and district councils, where public health-based interpretation of water quality data would be provided and any advisory notification posted. During 2018-2019, there were 922 page views of the data on the Council's individual freshwater bathing sites, 8% up on the previous year (which itself was 270% up from the year before). The figures do not include anyone viewing only the general environmental data map on the Council's home page, or anyone viewing the Council's monitoring data on the LAWA website. The Council's website's overview/freshwater quality summary map was the most frequently visited, with the individual page for Lake Rotomanu the most popular individual page (accounting for 9% of total page views). Other frequently visited pages were those showing data from the Oakura River, Lake Rotokare, and the Waiwhakaiho River at the Merrilands Domain.

Results

Microbiological quality

35. The Council's 2012-2022 *Long-Term Plan (LTP)* has as a target for microbiological quality in inland waters, the *maintenance or increase in the number of sites compliant with the 2003 Ministry of Health contact recreational guidelines*. Out of the 11 inland bathing sites that have been monitored in both seasons, 6 were compliant in 2003-2004, and 3 in 2018-2019. Of the sites in question, the Timaru Stream has in the last few years showed increasing numbers of 'Action' samples. Council staff have comprehensively investigated these incidents, and addressed some farming practices in the catchment.
36. In general terms, *E. coli* bacteriological water quality was somewhat worse than the long term patterns, as marked by the overall number of samples entering the 'Alert' level and increases in seasonal median counts at several sites. However, as usual there is a high degree of variability between individual sites. There were the same number of 'Action' samples as in the previous season. Variability in quality between bathing seasons at each site may be related to a variety of reasons including changing hydrological and meteorological conditions, stock access, wildlife presence, and dairy farm wastes disposal practices in particular.

³ *Suitability for swimming: Indicator update July 2013: INFO 690, Ministry for the Environment*

37. In relation to the guidelines, two bathing sites (the mouth of the Te Henui Stream and the Waiwhakaiho River site adjacent to Lake Rotomanu), failed almost invariably to meet the *E. coli* 'Action' guideline suitable for contact recreation. Both sites have high numbers of resident birds, and DNA analysis has shown that these populations are the cause of the high bacterial counts. It can be noted that the Waiwhakaiho River at Merrilands Domain i.e., below the agricultural catchment and within the urban area, consistently has very high quality (96% compliance in the last six years, although 94% in the season under review). The deterioration in recreational quality occurs within the city boundaries. Twenty-seven percent of samples in the lower Waiwhakaiho River have been compliant in the last six years. That is, compliance within the river drops from close to 100% in its agricultural reaches to about one-quarter of all samples within the urban reach.
38. Four sites maintained counts below the 'Alert' mode at all times throughout the season (compared with 2 in the previous season), while a total of 5 sites maintained counts below the 'Action' mode at all times (the same number as last season). In terms of all samples at bathing sites during the monitoring season, there were 43 'Action' samples (the same number as in the previous season). Twenty of these samples were at just two sites, as noted above. Sixty-one percent of all samples were in the 'surveillance' mode, a marginal improvement over the previous 2 seasons. Eleven of the 16 sites monitored in 2018-2019 had at least 75% of all samples below the 'Action' threshold.
39. In terms of median *E coli* bacterial numbers, the 5 bathing sites with the best water quality in 2018-2019 were:
 - 1 Lake Ratapiko
 - 2 Patea River at boatramp, Patea
 - 3 Urenui River at estuary
 - 4 Lake Rotomanu
 - 5 Waiwhakaiho River at Merrilands Domain.The Waiwhakaiho River at Merrilands Domain comes into this list, and Oakura River d/s of SH 45 bridge drops out of this list, from 2017-2018.
40. Based upon the number of samples that have been within the 'surveillance' mode (ie the category of highest quality of suitability for swimming) over the entire record since 1996, the following ranking of sites (in descending water quality) may be used to rank bathing sites in Taranaki:
 - 1= Patea River at boat ramp, Patea
 - 1= Urenui River at estuary
 - 1= Lake Ratapiko
 - 4 Waiwhakaiho River at Merrilands Domain
 - 5= Oakura River at SH45
 - 5= Waingongoro River at Ohawe Beach
 - 5= Lake Rotomanu
 - 8 Manganui River at Everett Park
 - 9 Kaupokonui River at beach domain
 - 10= Waingongoro River at Eltham Camp
 - 10= Lake Opunake
 - 12 Waitara River at town wharf, Waitara
 - 13 Timaru Stream at Weld Road

- 14 Patea River at King Edward Park, Stratford
 - 15 Waiwhakaiho River adjacent to Lake Rotomanu
 - 16 Te Henui Stream at mouth, East End.
41. Temporal trends over the 1996-2019 period have been evaluated for the sites that have ten years or more data (and will continue to be assessed annually). Two sites, the Waiwhakaiho River adjacent to Lake Rotomanu and the Te Henui Stream, show statistically significant increasing trends. Previously the site at the Eltham camp site on the Waingongoro River also showed statistically significant deterioration, but with the most recent results this trend is no longer as definite. There are indications of increasing trends in median E. coli counts at another twelve bathing sites, and of reductions at three bathing sites.
42. Permanent health warning signage have been erected by the New Plymouth District Council (on the direction of Taranaki District Health Board) following past exceedances of 'Alert' levels (at Oakura [for past Waimoku Stream issues], Waitara township, the lower Waiwhakaiho River, and Te Henui Stream). Temporary signage was also required at various times at Rotomanu, Ratapiko and Opunake lakes, and at the upper Patea and upper Waingongoro river sites, during the season. Vandalism of the warning signs at Waitara has been an on-going issue.

Microbiological quality: SFRG

43. The sites have also been re-graded for recreational suitability according to MfE, 2003 guidelines, based upon the immediately preceding five seasons of monitoring data (where such data exists). In addition, the Council assesses sites using the Ministry's 'Suitability for recreation' (SFRG) criteria that base grades on surrounding land use. In doing so, it emerges that although most of the sites' SFRGs suggest possible high risks associated with contact recreational usage, those SFRG gradings have been dictated by the agricultural nature of all catchments (meaning the sites are inevitably rated poorly regardless of proven quality).
44. The 5-year microbiological data to 2018 indicate 15 of 17 sites achieving compliance on 90% or more of occasions. Yet the only freshwater bathing site in Taranaki graded either 'good' or 'very good' according to MfE criteria is Lake Rotokare. Further, the Urenui River estuary site, the Waingongoro River site just above Ohawe Beach, the Patea River estuary site, the Manganui River site at Everett Park, the Waiwhakaiho River at Merrilands Domain, and the Lake Ratapiko site, have either never reached or else have had a maximum of 3 results in the 'Action' mode at any time during the last five seasons (i.e. at least a 95% compliance rate), under the sampling protocols of the SEM programme, and yet according to the Ministry for the Environment, all these sites should be deemed 'poor' sites for bathing.

Microbiological quality: NOF 'swimmability' criteria

45. In February 2017, MfE released proposals to further amend the NOF 'swimmability' criteria. These proposals were put into effect later that year. While data gathered within the Council's bathing season monitoring programmes is not collected as per the NOF specifications (which are for a year-round programme), this year's report assesses the state of Taranaki's freshwater bathing sites against the proposals, as a

matter of information⁴. The monitoring data from Taranaki's freshwater bathing sites for the past five seasons have been analysed against the 2017 MfE criteria for 'swimmability' and the results are depicted in the table below. The NOF criteria do not include any minimum ('bottom line') requirements, but the government has announced its intention that 90% of the nation's rivers should be in the yellow, green, or blue categories by 2040.

46. The Ministry has indicated that their view is that across all criteria, a single failure (i.e. either an 'orange' or a 'red') in any of the four distinct criteria is sufficient to constitute an overall 'unsuitable for swimming' grading. Of the 17 recognised freshwater recreational sites in Taranaki, for samples collected over the last five years under conditions suitable for recreation, 7 sites satisfy all criteria, and another 2 fail only one of the four criteria.
47. What becomes apparent is that gradings denoting degrees of suitability for swimming vary immensely according to the particular criterion. For example, the quality of the Oakura River below SH45 can apparently be variously rated as 'excellent', 'good', or 'only intermittently suitable' for swimming. Likewise, the Patea River at King Edward Park is either 'good', 'intermittently suitable', or not safe to swim in; and the Waingongoro River at Ohawe Beach could be variously graded as 'excellent' through to only 'intermittently safe', depending on the choice of criterion. This lack of rationalisation between criteria is not helpful for sensibly conveying 'swimmability' to the public.

Cyanobacteria

48. The presence of cyanobacteria can trigger health warnings in any of 3 ways- excessive coverage of the stream bed, exposure of algal mats on rocks at the water's edge, excessive quantities of detached mats floating in the water column, or 'blooms' of planktonic cyanobacteria. There are national guidelines for unacceptable levels of stream bed coverage or the concentration of planktonic cyanobacteria in blooms. In addition, the Council has chosen to also adopt an approach when exposed or detaching mats are detected. To date there have been no reported incidences of humans or animals in the Taranaki region having been harmed by toxins produced by benthic cyanobacteria though there may well have been unreported incidences. Microscopic analysis of benthic cyanobacteria reveals that toxin-producing bacteria are generally present.
49. For planktonic (floating) cyanobacteria, of the four designated lake monitoring sites, two had biovolumes exceeding contact recreational guidelines at some time during the 2018-2019 season, requiring the erection of warning signs: Lake Rotokare (a natural bush catchment) for December and January, and Lake Rotomanu up until mid January. Planktonic cyanobacteria were detected in Lake Opunake and Lake Ratapiko only at low levels on occasion throughout the season.
50. Benthic (streambed) cyanobacteria was monitored at nine locations throughout the season, and, while detected occasionally, never reached public health warning levels in respect of streambed coverage at any site. On two occasions in late spring, the

⁴ For the most recent classification of Taranaki's waterways sampled and assessed according to the NOF 'swimmability' regulations, see *Freshwater Physicochemical Programme State of the Environment Monitoring Annual Report 2017-2018, Technical Report 2018-103*, Taranaki Regional Council June 2019

degree of exposure of mats at Kaupokonui River at its mouth triggered the erection of warning signs for the time being.

51. Exposed and/or detached mats exceeded the 'Alert' threshold on a number of occasions at several sites, although there were fewer such events than over the past 3 years.

Other matters

52. Microbial source determination testing has previously been conducted at a number of recreational sites, using environmental forensic DNA testing techniques. DNA marker tracking investigations in the Patea River at Stratford, the Waingongoro River at Eltham and the Timaru Stream have found that the principal faecal contributions were sourced from wildfowl and from ruminants. No human markers were found. The Council continues to use the technique for investigative purposes.

Conclusions

53. The report includes recommendations for the 2019-2020 bathing season that pertain to the scope of the sampling programme and integration with the dairy treatment pond compliance monitoring programme so that any adverse effects and sources can be efficiently identified and appropriate action taken. The recommendations are reproduced as an appendix to this memorandum, for the information of Members.
54. There is variability in quality between bathing seasons at each site, which is related to a variety of reasons including hydrological conditions, stock access, the presence of wildlife (particularly wildfowl), and dairy farm wastes disposal practices in particular. Similar results have been recorded elsewhere for sites in the middle and lower reaches of other streams and rivers in New Zealand (Deely et al, 1997 and MfE, 2008). The Ministry for the Environment identifies dense bird and wildlife populations, agricultural runoff, and storm water or sewerage discharges as potential sources of contamination. These factors continue to be the major sources of adverse impacts on recreational water quality for the Council to address.
55. The Council's intentions re the completion of the regional riparian management programme and the diversion of the remaining dairy effluent treatment system discharges from streams to land will serve to reduce bacterial loadings on our streams. The finding of the 2018 study by NIWA⁵ into the outcomes of the riparian programme, that there has been a meaningful reduction in bacterial loadings in the waterways of the ringplain correlated with the progressive implementation of the programme, is noted.

Decision-making considerations

56. Part 6 (Planning, decision-making and accountability) of the Local Government Act 2002 has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the Act.

⁵ *Analysis of stream responses to riparian management on the Taranaki ring plain*, NIWA client report 2018051HN, prepared for Taranaki Regional Council, March 2018

Financial considerations—LTP/Annual plan

57. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

58. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the Local Government Act 2002, the Resource Management Act 1991 and the Biosecurity Act 1993.

Iwi considerations

59. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the Local Government Act 2002) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

60. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Appendices

Document: 2267366: Executive summary and recommendations from '*Freshwater contact recreational water quality at selected Taranaki sites State of the Environment Monitoring Report 2018-2019, Technical Report 2019-01*, September 2019.

Executive summary

(from 'Freshwater contact recreational water quality at selected Taranaki sites State of the Environment Monitoring Report 2018-2019, Technical Report 2019-01')

This survey of sixteen recognised freshwater contact recreational sites in the Taranaki region was the twenty-third of an on-going programme designed to annually monitor the bacteriological quality of lakes, rivers and streams at popular contact recreational sites during each bathing season. It forms a component of the State of the Environment bathing beaches trend monitoring programme, which commenced in the 1995-1996 summer period. Two sites (at Lakes Ratapiko and Opunake) were monitored in this programme during this 2018-2019 period for the thirteenth time, partly as a component of the more recently instituted cyanobacteria programme (covering four lakes) instigated after consultation with Taranaki District Health Board. A site in the lower Waitara River was added in the 2010-2011 period at the joint request of Taranaki Healthcare and NPDC and two additional sites in the lower reaches of the Waiwhakaiho River and Te Henui Stream (both adjacent to the New Plymouth walkway) were included in the programme in the 2012-2013 period. The sixteen sites have been graded for recreational suitability (SFRG) according to MfE, 2003 guidelines, in part based upon the immediately preceding five seasons of monitoring data (where such data existed) although short-comings of this grading methodology are acknowledged. A re-assessed SFRG also has been provided by inclusion of the current season's data for comparative purposes and this showed minimal change of the microbiological water quality gradings over this latest five year period.

A further site (Lake Rotokare) has been monitored since 2007, principally for planktonic cyanobacteria. Additional comprehensive flowing water benthic cyanobacteria monitoring (at nine river/stream sites) was undertaken in the current period for the sixth time in this state of the environment programme.

Changes were made in 2016-2017 to follow protocols for reporting on the Land and Water Aotearoa (LAWA) website: sampling frequency at four of the most popular sites (Lake Rotomanu, Waiwhakaiho River at Merrilands Domain, and Kaupokonui and Waingongoro river mouths) was increased to weekly, mainly in dry weather, from December to February inclusive, and extended to March in 2017-2018.

The results of the 2018-2019 survey have continued to illustrate variability in bacteriological water quality, with the highest quality achieved at the Urenui River estuary and lower Patea River sites where marked seawater intrusion is the norm (under high tide conditions), and Lake Ratapiko. Impacts on bacteriological water quality at some sites, particularly the lower reaches of the Waiwhakaiho River and Te Henui Stream, were due principally to resident wild fowl populations in the vicinity of recreational usage sites (as confirmed previously by inspections and DNA marker surveys).

In terms of *E. coli*, bacteriological water quality in the latest survey period was lower than normal in comparison with historical surveys. The total number of samples falling within the "Alert" or "Action" categories (39% of samples) across the 16 recognised bathing sites was among the highest recorded. However, it should be noted that the "Action" category is the only category for which swimming is not recommended. In the 2018-2019 season, 79% of all samples met the national bathing guideline. Of the 21% of samples that exceeded the

guideline, 10% arose from just two sites - the two New Plymouth urban sites. Bird life was mainly responsible for the exceedances at these sites.

Two sites recorded all single samples in either the 'Alert' or the 'Action' mode of the MfE, 2003 guidelines (Te Henui Stream near East End beach and Waiwhakaiho River opposite Lake Rotomanu). Ten other sites from time to time exhibited single sample entries, mainly into the 'Alert' mode of the 2003 guidelines, at some time during the season. Nine of these sites had counts which entered the 'Action' mode, a slight increase in the number and frequency of guideline exceedances in comparison with many previous seasons' results. To a certain extent these exceedances were probably a feature common to the mid and lower reaches of rivers and streams draining developed (particularly agricultural) catchments throughout New Zealand.

Notably, only two exceedances of the MfE 'Action' guideline were found in the Waiwhakaiho River at Merrilands Domain (mid urban New Plymouth and downstream of agricultural land), whereas 9 of 13 samples exceeded this guideline further downstream near this river's mouth.

At most sites, minimal follow-up sampling was performed when deemed necessary following exceedances of the 'Action' limit, as in most cases bacteriological quality was found to have returned to typical levels within short time frames or the causes were well established from historical data. Permanent health warning signage had been erected by the New Plymouth District Council (on the direction of Taranaki District Health Board) following past exceedances of 'Action' levels at the lower Waiwhakaiho River and Te Henui Stream sites, and of 'Alert' levels at Waitara. Temporary signage was required at the Lakes Rotomanu and Opunake, Timaru Stream and Oakura, Kaupokonui, upper Patea and lower Waingongoro Rivers sites following single sample 'Action' levels, but single sample 'Alert' level exceedances at other sites were not necessarily signposted.

Temporal trends over the 1996-2019 period have been evaluated on the basis of seasonal median E. coli count for the sixteen sites that have ten years or more data (and will continue to be assessed annually). Two sites (Te Henui Stream and lower Waiwhakaiho River) have shown a statistically significant increasing trend. No other sites have shown statistically significant trends (positive or negative) in seasonal median E. coli counts.

Additional sampling (in accordance with the MfE, 2003 guidelines for datasets for grading purposes) at four principal usage sites (Lake Rotomanu and Waiwhakaiho, Kaupokonui and Waingongoro Rivers) occurred largely in dry weather and resulted in little change in the overall median bacteriological numbers.

Cyanobacteria blooms were recorded at Lake Rotomanu over two months from mid-November 2018, and at Lake Rotokare in December 2018 and January 2019. This necessitated warning notices to avoid contact recreation in these two lakes during much of the first half of the recreational period. Low to moderate levels of planktonic cyanobacteria were found in Lakes Opunake and Ratapiko.

Benthic cyanobacteria were found occasionally in most of the nine rivers and streams monitored. Monitoring frequency was increased from fortnightly to weekly in response to 'Alert' levels found on several occasions. Two sites (Waingongoro and Kaupokonui Rivers at mouth) exceeded the 'Alert' mode trigger level for bed coverage on a total of eight surveys. Exposed mats exceeded the 'Action' level in Kaupokonui River at the beach domain in

November 2018, triggering warning notices to contact recreational users. The 'Alert' mode trigger level for exposed mats was exceeded at four sites on a total of 15 individual site surveys, and for detaching or detached mats accumulating on the river's edge at the same four sites (Waingongoro River at Ohawe, Kaupokonui River at the mouth, and Waiwhakaiho River at the last riffle and at Merrilands Domain) on a total of 13 surveys. Levels of cyanobacteria were higher than in the previous two seasons, but lower than the preceding two seasons, probably a reflection of the relative amounts of rainfall causing freshes that scour streambeds of periphyton.

Timely reporting of the results of bacteriological water quality and cyanobacteria numbers/cover was undertaken by use of the Taranaki Regional Council website (www.trc.govt.nz) and LAWA website (www.lawa.org.nz) as well as liaison with territorial local authorities and the Health Protection Unit of Taranaki District Health Board throughout the survey season of 2018-2019.

For the third time, this report also discusses the monitoring results in the light of the criteria for primary recreational use of water bodies ('swimmability') set out in the National Objectives Framework that is attached to the National Policy Statement for Freshwater Management 2014.

It is recommended that annual bacteriological monitoring of selected freshwater sites be continued (in conjunction with the coastal bathing water programme) by use of a similar sampling format over a five month (November to March inclusive) contact recreational period to provide information for trend detection purposes and for assessment of suitability for contact recreational usage. Cyanobacteria monitoring at the four lakes sites and nine stream/river sites at a lesser frequency is also recommended to continue. A further recommendation involves appropriate scheduling of the annual round of dairy wastes disposal systems and advice provided in relation to stock access to watercourses to attempt to reduce the frequency of exceedances of recreational limits particularly in catchments where historical problems from this source have been located.

6. Recommendations

(from 'Freshwater contact recreational water quality at Taranaki sites State of the Environment Monitoring Report 2017-2018, Technical Report 2018-01')

As a result of the 2017-2018 summer freshwater contact recreation bacteriological survey it is recommended:

1. THAT the 2018-2019 survey be performed at sixteen regular sites continuing with the existing sampling protocols during the season extending from 1 November to 31 March (and into April, if necessary).
2. THAT the 2018-2019 survey includes additional samples collected at the four principal usage sites (Lake Rotomanu, Waiwhakaiho River at the Merrilands Domain, Waingongoro River at Ohawe and Kaupokonui River at the mouth) in accordance with MfE, 2003 guidelines.
3. THAT the 2018-2019 summer survey includes cyanobacteria monitoring at the three lake sites and an additional lake (Rotokare) site and benthic cyanobacteria monitoring at nine of the river and stream sites fortnightly on at least ten occasions.
4. THAT follow-up sampling (after guideline exceedances) be performed when deemed necessary by TRC staff.
5. THAT appropriate timing of the annual dairy farms inspection round be incorporated into the programme for catchments where issues relating to exceedances of contact recreational standards have been identified and advice and publicity be provided in relation to the prevention of stock access to natural water.
6. THAT reporting of results be performed as appropriate during the season, and in an Annual Report upon completion of the season's programme.
7. THAT the appropriate statistical trend detection procedures be applied to the data and reported in the Annual Report

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

**Subject: Bathing beach recreational water quality
SEM report 2018-2019**

Approved by: G K Bedford, Director-Environment Quality

B G Chamberlain, Chief Executive

Document: 2315864

Purpose

1. The purpose of this memorandum is to present to the Committee the report on the quality of coastal bathing waters in the Taranaki region during the 2018-2019 bathing season, as set out in the report *Bathing Beach Water Quality State of the Environment Monitoring Report Summer 2018-2019, Technical Report 2019-36*. The Executive summary and recommendations from the report are attached to this memorandum. The full report is available upon request, and will be published on the Council's website following this meeting.

Executive summary

2. The report provides an assessment of microbial water quality at 14 bathing beach sites in the Taranaki region, based on routine summer monitoring of faecal indicator bacteria (enterococci) in the 2018-2019 summer. A core group of 10 beaches is monitored every year, and another 10 are monitored over the course of a rotating 3-year cycle. Results are assessed for any evidence of trends, and for compliance with microbiological water quality guidelines for recreational use prepared by the Ministry for the Environment (MfE) and the Ministry of Health (MfE, 2003), and are released to the public via the Council's website.
3. Thirteen samples are collected at every site under bathing conditions ('SEM samples'), with 8 of the sites having a further 10 or so samples collected at each, under all-weather and all-tide conditions ('MfE samples').
4. During the 2018-2019 summer season, exceedances of guidelines for microbiological water quality across bathing beaches in the Taranaki region were only sporadic, during what was a drier than usual season. Sampling during a wet weather run and a pollution event at Ngamotu Beach gave the highest results during the season. (Enforcement action was undertaken). Median enterococci counts recorded in the SEM programme were lower or equal to their respective historical medians at seven sites, and higher at the remaining seven sites.

5. Out of the 243 samples collected for SEM purposes, 92% were in the highest water quality category (surveillance mode). In the previous, wetter summer, this figure was 89%.
6. In the 2018-2019 season, Fitzroy, Opunake, and Oakura (camping ground site) were the region's cleanest bathing beaches. It should be noted that even the beach with the highest median count, Ohawe beach, had a median count that were less than 30% of the 'Alert' threshold. No sample at Ohawe reached the 'Action' threshold. The higher counts at Ohawe were strongly correlated with a riverine influence. Over the long term, Opunake, Oakura beach in front of the camping ground, Fitzroy, and Urenui beaches are amongst the region's cleanest.
7. The Fitzroy Beach site continues to show a statistically significant improvement. This may be associated with improvements to stormwater control in the vicinity. No site is showing a statistically significant deterioration. While Ohawe Beach has shown a significant trend of improvement from about 2003 (following the removal of the Eltham waste water discharge into the Waingongoro River), the quality has now stabilized. There is still an overall indicative improving trend.
8. In the case of the Waitara beaches, this has been the fifth bathing season since the discharge of treated municipal sewage has been diverted to New Plymouth. Having noted that, the Waitara River rather than the outfall is considered to have had the greater effect on bacteriological quality on the two Waitara beaches. Waitara East beach shows an indicative but not statistically significant tendency towards improvement in recent years, with no indications of any change apparent at Waitara West beach.
9. Over the long term, 6 of the sites monitored during the season under review indicate a tendency towards improvement, and 4 an extremely slight tendency towards deterioration. Four sites have insufficient data for any trend analysis.
10. Through the Council's Long Term Plan (LTP) and 2018-2019 Annual Plan, the Council's target in respect of the microbiological state of coastal bathing sites is that there is maintenance or increase in the number of sites from 2003 compliant with 2003 Ministry of Health contact recreational guidelines. In 2003, 7 of 9 coastal bathing sites were compliant with the guidelines ('Action' levels). In the season under review, 8 of these same sites were compliant throughout the season. As noted above (para 4), there was an 'Action' event at Ngamotu Beach during the season.
11. In terms of public interest in information about water quality at bathing beaches, visits to the individual web pages on the Council's website that present information on coastal recreational water quality underwent a massive increase of over 700% in the 2018-2019 year- 1726 page views to the coastal water quality page, compared with 215 in the previous year (which admittedly was wet later in the bathing season). On 11 December 2018, the Council posted a story on its Facebook page publicising the Council pages presenting coastal recreational data. Notable spikes in visit numbers over the next couple of weeks included 76 on 11 December, 146 on Monday 17 December, 71 on Thursday 27 December, and 62 on Tuesday 1 January. The Facebook page itself had a reach of 16,386 people (number of destinations that the page reached), and 2,549 engagements (individual interactions with the Facebook page eg clicking on links,

posting a comment, forwarding the link to another party).

Recommendations

That the Taranaki Regional Council:

- a) receives the memorandum noting the preparation of the report *Bathing Beach Water Quality State of the Environment Monitoring Report Summer 2018-2019 Technical Report 2019-36a*; and
- b) adopts the specific recommendations presented in Technical Report 2019-36.

Background

12. Taranaki's coastal and inland fresh waters are widely used for a range of contact recreational activities such as swimming, sailing, surfing, wind surfing, and underwater diving. The sea is important as a source of kaimoana. Maintaining and protecting the quality of this recreational water is therefore an important resource management and public health issue.

13. The Council's notified Proposed Coastal Plan noted:-

The coastal environment is an important and valued part of Taranaki's environment and the quality of life offered by the region. The coastal marine area in particular is an extensive area of public space available for people to use and enjoy. It is where we play, gather food, undertake traditional practices, or relax. Many coastal resources and activities contribute to the economic, social and cultural well-being of communities..... Taranaki generally has high quality coastal water, mainly as a result of the region's exposed coastal environment and low development pressures. However, a deterioration of coastal water quality can sometimes occur in discrete areas, such as near river mouths and in close proximity to wastewater discharges.

The resources of Tangaroa have provided for and nourished the iwi o Taranaki for generations. These resources were integral to the lives of the people who occupied the settlements that adjoined the coastline. Tangaroa provided for them materially, acted as a highway for travel, a source of rongoa (medicine), aided their well-being and provided for their spiritual sustenance..... Sustainable coastal management, through the exercise of kaitiakitanga and tikanga, is at the heart of the relationship between iwi o Taranaki and the coastal environment. This Plan has integrated iwi o Taranaki values throughout the Plan provisions.

14. The draft policies set out in the Plan address the public use and enjoyment of the coastal environment, including enjoyment of its amenity and recreational values. Through its Annual Plan, the Council is committed to monitoring the microbiological state of coastal bathing sites.
15. It is recognised that the quality of coastal waters in New Zealand is variable. It can be compromised by contaminants from sources such as sewage and storm water outfalls, septic tanks, urban run-off, birdlife, sanitation discharges from boats, and dairy effluent discharges and contaminated run-off from agricultural land. The Ministry for the Environment has identified that at a national scale, intensifying land uses in rural areas and rapid urban development of coastal areas have the potential to put increasing pressure on the quality of the country's coastal recreational waters.

16. As one of the suite of State of the Environment (SEM) monitoring programmes that the Council has in place, bathing water quality around the region's coastline is assessed each summer. Ten primary beach sites are repeatedly sampled during the bathing season every year, and another ten beaches are sampled one year in three on a rotating basis. The SEM programme began in 1995-1996 and there had also been a number of surveys prior to this time.
17. The bacteriological state of each site is compared with national guidelines¹.
18. Through the Council's LTP and 2018-2019 Annual Plan, the Council's target in respect of the microbiological state of coastal bathing sites is that there is *maintenance or increase in the number of sites from 2003 compliant with 2003 Ministry of Health contact recreational guidelines*. In 2003, 7 of 9 coastal bathing sites that are being monitored annually were compliant with the guidelines (i.e. went throughout the entire season without an 'Action' level event).

Discussion

19. The report presented to the Committee today summarises the results for the 2018-2019 bathing season, including beaches monitored in year one of the rotation.
20. Thirteen samples were collected over the bathing season at each of the 14 sites designated for the season, as part of the Council's regular SEM monitoring programme, with an additional 8 or so samples collected at 8 of the primary beaches to fulfil Ministry for the Environment requirements for calculation of microbiological assessment categories (which go beyond the Council's long-established programme and are sampled under a different protocol, including sampling within all-weather and all-tide conditions). Follow-up samples were often collected following instances where enterococci counts in scheduled sampling exceeded the threshold for 'Alert' status. Due to adverse weather and unsafe sampling conditions, not all sites were sampled on every occasion.
21. The monitoring results have been assessed using the national microbiological guidelines for marine recreational areas (MfE, 2003). The indicator bacteria measured are enterococci. Levels of less than 140 enterococci per 100 ml are considered to be acceptable (i.e. water quality is suitable for bathing, and approximately weekly sampling is routinely undertaken for surveillance purposes). Should any routine samples contain greater than 140 enterococci per 100 ml, the 'Alert' mode is triggered – that is, water is deemed potentially unsuitable for bathing, and further sampling is often undertaken. This is a mode for elevated surveillance, and it is not considered that public health has been compromised if sample results are at this level.
22. Samples containing greater than 280 enterococci per 100 ml indicate water is highly likely to be contaminated. The guideline recommendation is that further sampling is to be undertaken again within 24 hours, to see if the elevated bacteriological counts are

¹ *Microbiological Water Quality Guidelines for Marine and Freshwater Recreational Areas*, Ministry for the Environment 2003

continuing. If the second result in this case is also above 280, then the 'Action' categorisation is designated. That is, it is when there are two consecutive samples above 280 enterococci per 100 ml in a specific sequence, that it is considered public health is potentially compromised. Any follow-up action is in the hands of the Taranaki District Health Board. High flows in streams and rivers following rainfall events may have a major but localised influence on the water quality of Taranaki beaches, and re-sampling is not always undertaken if a significant rainfall event in the recent past is determined to be the likely cause of a sample exceeding 280 enterococci per 100 ml.

23. Microbiological water quality in the 2018-2019 season was generally very good, by comparison with the previous season when quality had been adversely affected by higher than usual levels of summer rainfall, and also particularly by Cyclone Fehi at the beginning of February 2018 (coinciding with a king tide height). The drier than usual summer in 2018-2019 meant that exceedances of the 'Alert' threshold were only sporadic in this most recent season. During the 2018-2019 summer season, 91.8% of the 243 scheduled samples remained within surveillance mode (compared with 89% in 2017-2018).
24. Based on median counts in the 2018-2019 season, Opunake, Fitzroy and Oakura beach in front of the camping ground were the region's cleanest bathing beaches. These results largely mirror those of past years. Opunake and the Oakura beach in front of the camping ground are consistently the best in the region, followed closely by Fitzroy, Patea, and Waverley beaches.
25. As has been the case in previous years, Oakura Beach (surf club site) and Ohawe Beach were comparatively the worst, while noting that their seasonal SEM survey medians of 30 and 45 were still only 15% of the 'Action' and 30% of the 'Alert' trigger levels. Further, neither site had any individual samples reaching the 'Action' level. Median counts at both beaches in 2018-2019 were somewhat above those in their long-term records. Ohawe Beach has shown a trend of improvement in previous years (following the removal of the Eltham waste water discharge into the Waingongoro River), although this tendency has now dissipated.
26. Both of these sites show a particularly pronounced riverine influence from time to time, and this contributed to relatively higher counts at Ohawe Beach on several occasions in the season under review.
27. In the case of the two Waitara beaches, this has been the fifth season since the discharge of treated municipal sewage has been diverted to New Plymouth. Having noted that, the Waitara River rather than the outfall was considered to have had the greater effect on bacteriological quality on the beaches. Waitara East beach shows an indicative but not statistically significant tendency towards improvement in recent years, with no indications of any change apparent at Waitara West beach. Over 95% (Waitara East) and 95% (Waitara West) of all samples remained below even the 'Alert' level.
28. The site at Fitzroy Beach is showing a statistically significant improvement. This may be associated with improvements to stormwater control in the vicinity, undertaken by NPDC. Bacterial counts at most of the region's beaches are so low that it would be

impossible to bring about a statistically significant improvement.

29. No site is showing a significant deterioration over the record of results. In terms of indicative (as distinct from statistically significant) trends, six sites are showing signs of reductions in median enterococci, while four are showing an extremely slight tendency towards deterioration in bacteriological quality. Four sites have insufficient data for any trend analysis.
30. In terms of the Council's target in respect of the microbiological state of coastal bathing sites as expressed in the Council's LTP and 2017-2018 Annual Plan, the target is that there is *maintenance or increase in the number of sites from 2003 compliant with 2003 Ministry of Health contact recreational guidelines*. In 2003, 7 of 9 coastal bathing sites that were monitored annually were compliant with the guidelines (ie remained throughout the season below the 'Action' level category). In the 2018-2019 season under review, all SEM sample results at 8 of the 9 same beaches were compliant with this guideline. The LTP target was therefore met. At the remaining beach (Ngamotu Beach), routine sampling detected an ongoing contamination issue that led to remedial interventions by the Council and other parties, and enforcement action. Follow-up sampling confirmed the efficacy of the interventions.
31. Frequent and timely reporting of the results of bacteriological water quality was undertaken by use of the Taranaki Regional Council website (www.trc.govt.nz) as well as liaison with territorial local authorities, the Health Protection Unit of Taranaki District Health Board, and Ngāruahine throughout the summer bathing season of 2018-2019.
32. Continuation of the bathing beach SEM programme in the 2019-2020 bathing season is recommended.

Decision-making considerations

33. Part 6 (Planning, decision-making and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the *Act*.

Financial considerations—LTP/Annual Plan

34. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

35. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991* and the *Local Government Official Information and Meetings Act 1987*.

Iwi considerations

36. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

37. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Appendices

Document 2275785: Bathing Beach Water Quality State of the Environment Monitoring Report Summer 2018-2019, Technical Report 2019-36 (executive summary and recommendations).

Executive summary

This report provides an assessment of microbial water quality at 14 coastal bathing beach sites in the Taranaki region, based on summer monitoring of faecal indicator bacteria conducted by the Council between November 2018 and March 2019. The report focusses on enterococci results, as this indicator is considered by health authorities to provide the closest correlation with risks of health effects in New Zealand coastal waters. Results have been assessed for compliance with microbiological water quality guidelines prepared by the Ministry for the Environment (MfE) and the Ministry of Health (MfE, 2003).

Thirteen samples were collected at every monitored beach under dry weather conditions for State of the Environment Monitoring (SEM) purposes, except when it was unsafe to do so. At eight of the ten coastal sites monitored every year, an extra eight samples were collected to satisfy MfE requirements for the number of seasonal samples to be used for grading purposes and to provide more timely results during the holiday periods. Follow up samples were often collected following instances where enterococci counts exceeded 140 cfu/100 ml. Microbiological water quality results were regularly reported on the Taranaki Regional Council website (www.trc.govt.nz) and there was timely liaison with territorial local authorities and the Health Protection Unit of the Taranaki District Health Board throughout the summer bathing season of 2018-2019.

During the 2018-2019 summer season, 243 routine samples were collected across 14 sites; of which 91.8% remained within Surveillance mode (≤ 140 cfu/100 ml). Guideline exceedances were relatively sporadic during what was a drier than usual summer, although a wet weather survey and a pollution incident at Ngamotu Beach contributed to the highest counts of the season. Median enterococci counts recorded in the SEM programme were lower or equal at seven sites, and higher at seven sites, when compared with their respective historical medians.

The normal mode of monitoring is deemed the 'Surveillance' mode. Additional monitoring is considered if a sample exceeds the 'Alert' mode (140 cfu/100 ml). The 'Action' mode guideline is reached when enterococci counts in two consecutive samples exceed 280 enterococci cfu/100 ml, and requires public notification by health authorities. There was one Action mode event during the summer which was associated with the Ngamotu Beach pollution incident. The latter resulted in enforcement action by the Council.

Over both the SEM programme and the extended (MfE) programme, Fitzroy Beach, Opunake Beach, and Oakura Beach (camping ground site) had the best water quality, and Ohawe Beach the lowest (although the median count here was still less than one-third of the 'Alert' threshold). No sample at Ohawe Beach reached the 'Action' threshold. High counts at Ohawe Beach were associated strongly with low conductivity (riverine influence). Five sites had every sample below the 'Alert' threshold, with another four sites above this threshold only once.

Mann-Kendall tests were performed in order to assess long term trends in microbiological water quality. One site, Fitzroy Beach, showed a significant decrease in median enterococci counts (improving quality) over the 24 years it has been monitored, indicating an overall improvement in microbiological water quality. Several sites have water quality so consistently high that further significant reductions in bacteriological counts cannot be

expected. No site showed a significant increase in enterococci medians over the time period monitored i.e. deterioration in water quality.

Two sites, Waitara East and Oakura Beach in front of the camping ground, were showing indications of improving quality although at a lower level of certainty than required for statistically-based confidence.

Through the Council's Long Term Plan (LTP), the Council's target in respect of the microbiological state of coastal bathing sites is that there is maintenance or increase in the number of annual monitoring sites from the 2003-2004 summer that are compliant with the contact recreational guidelines (MfE, 2003). In the 2003-2004 summer, seven of the nine coastal bathing sites were compliant with the guidelines (Action levels). In the season under review, one site (Ngamotu Beach) exceeded this guideline. The LTP target was therefore met.

Continuation of the Bathing Beach Recreational Water Quality Programme in the 2019-2020 year is recommended.

Recommendations

As a result of the 2018-2019 bathing beach recreational water quality survey it is recommended:

1. THAT the 2019-2020 summer survey be performed at 12 sites continuing with the existing sampling protocol (sites monitored annually, plus Year 2 sites).
2. THAT the 2019-2020 summer survey also includes weekly 'MfE samples' at eight sites (Onaero, Waitara West, Waitara East, Fitzroy, Ngamotu, Oakura Surf Club, Opunake and Ohawe) between December and February in accordance with MfE, 2003 guidelines to provide up to date public information on beach conditions throughout the holiday periods.
3. THAT follow-up sampling be performed as deemed necessary by Council staff.
4. THAT public reporting of results be performed as appropriate during the season, and in an annual report upon completion of the season's programme.

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

**Subject: Submission on protecting Hector's and
Māui dolphins**

Approved by: AD McLay, Director – Resource Management
BG Chamberlain, Chief Executive

Document: 2317363

Purpose

1. The purpose of this memorandum is to introduce the submission on the discussion paper *Proposals for the Hector's and Māui Dolphin Threat Management Plan* (the discussion paper) and to recommend its endorsement by the Council.
2. The deadline for submissions was 19 August 2019. The attached submission reflects Council policies and previous submissions on the threats to Hector's and Maui dolphins. However, the Department of Conservation (DOC) were advised that this submission would be formally considered by the Policy and Planning Committee at this meeting and may be subject to any changes arising from members' consideration and feedback.

Executive summary

3. In June 2019, the Government released the discussion paper on proposals for an updated Hector's and Māui Dolphin Threat Management Plan. The deadline for submissions was originally 4 August 2019 but this was extended to 19 August to allow for more consultation.
4. The purpose of the discussion paper is to seek views and input into proposals for an updated Hector's and Māui Dolphin Threat Management Plan, including proposals addressing the management of fishing, toxoplasmosis and other non-fishing threats.
5. Key options outlined in the discussion paper include: extending current restrictions on trawling and set netting in areas; increasing the boundaries of marine mammal sanctuaries; developing an action plan to address the threat from the disease toxoplasmosis; and placing further restrictions on seismic surveying and seabed mining.
6. The attached draft submission is largely supportive of the review into protection for Hector's and Māui dolphins. In particular, there is support for the goals and for DOC

and Fisheries New Zealand to take responsibility for ensuring and supporting appropriate additional research and investigations, including a toxoplasmosis action plan.

7. The draft submission supports extending the sanctuary (noting the significance of the South Taranaki Bight and foraging grounds further offshore for a variety of marine mammal species, including the Pygmy Blue Whale) subject to any restrictions imposed being proportionate to the risks.
8. The draft submission also provides qualified support for restrictions addressing human-induced impacts but that again that these restrictions be targeted, proportionate to the risks, and recognise the effectiveness of other regulatory and policy frameworks also relevant and contributing to the protection of Hector's and Māui dolphins.
9. Note that the proposals to extend the current North Island Marine Mammal Sanctuary extent to Wellington, within the coastal marine area out to 12 nautical miles, would identify the entire Taranaki coastal marine area as a marine mammal sanctuary with associated restrictions on important commercial activities in this area.
10. Iwi hold fishing quota that may be impacted by the review. Given a small portion of the commercial catch is used to provide food for cultural purposes these may also be impacted. There has been little consultation with Iwi Authorities on this important matter.
11. Any restrictions on commercial activities should occur through appropriate economic, cultural and environmental assessments in appropriate legal frameworks, rather than via the narrow, limited and indirect threat management review process.

Recommendations

That the Taranaki Regional Council:

- a) receives the memorandum *Submission on protecting Hector's and Māui dolphins*; and
- b) endorses the submission with any changes recommended by the Committee.

Background

12. DOC and Fisheries New Zealand have sought feedback on a revised plan to protect Hector's and Māui dolphins.
13. Hector's and Māui dolphins are unique marine mammals found only in New Zealand waters. These species live close to the coast, making them particularly vulnerable to human activities. Their range includes the Taranaki coastal marine area with north Taranaki coastal waters already being identified and included in the Marine Mammal Sanctuary.
14. Hector's and Māui dolphin numbers have been dwindling nationally. There are estimated to be only between 57 and 75 Māui dolphins over the age of one year left in existence. They are classified as Nationally Critical under the *New Zealand Threat Classification System* and are found only on the west coast of the North Island There are

around 15,000 Hector's dolphins (mainly South Island) and they are classified as Nationally Vulnerable.

15. Alongside fisheries impacts (such as trawling and set nets) there are several other threats to these dolphins, including disease (toxoplasmosis), seismic surveying, seabed mining and vessel-based tourism.
16. In June 2019, the Government released a discussion paper to consult on a range of options to improve the way threats to Hector's and Māui dolphins are being managed by the *Hector's and Māui Dolphin Threat Management Plan*. The deadline for submissions was originally 4 August 2019 but this was extended to 19 August to allow time for more consultation.

The proposals

17. The purpose of the discussion paper is to seek views and input into proposals for an updated Hector's and Māui Dolphin Threat Management Plan, including proposals addressing the management of fishing, toxoplasmosis and other non-fishing threats.
18. Proposals set out in the discussion paper have been put together using the best available information. Key options presented include:
 - extending current restrictions on trawling and set netting;
 - increasing the boundaries of marine mammal sanctuaries (there are four options for protecting Māui dolphins in the North Island, and three options for protecting Hector's dolphins in the South Island from fishing related threats;)
 - placing further restrictions on seismic surveying and seabed mining;
 - developing an action plan to address the threat from the disease toxoplasmosis, which has emerged as a significant threat; and
 - placing a moratorium on commercial tourism permits to view Māui dolphins.
19. The discussion paper and supporting documentation can be viewed at <https://www.doc.govt.nz/get-involved/have-your-say/all-consultations/2019/hectors-and-maui-dolphins-threat-management-plan-review/>.

The draft submission

20. As previously mentioned, the draft submission is largely supportive of the review into protection for Hector's and Māui dolphins. The submission states that targeted effective management is required by the Government to manage the effects of human-induced deaths on these important dolphins.
21. Key points made in the draft submission are as follows:
 - Support the four medium-term goals in the discussion paper regarding the management of human-induced threats, engaging New Zealanders, understanding tangata whenua expectations on exercising kaitiakitanga and improving knowledge.
 - Highlight importance of goal 4 [Improve knowledge of poorly understood threats], which is considered particularly important for the overall success of the revised management plan. Submission notes that it is essential that the DOC and

Fisheries New Zealand take responsibility for ensuring and supporting appropriate additional research and investigations.

- Encourage DOC to carefully assess the socio-economic effects through a thorough cost benefit analysis of any fishing restrictions to the Taranaki region to ensure any further fishing restrictions in Taranaki are proportionate to the risks posed to the Māui dolphin population.
- Taranaki iwi hold fishing quota which may be impacted by any fishing restrictions imposed through the review. Customary fishing practices associated with pataka, that provide fish for cultural purposes, eg tangi, may also be negatively impacted if commercial fishing is impacted. Pataka is a small portion of what is commercially caught. Hence there may be economic and cultural impacts and appropriate consultation is required. However, little consultation with Iwi Authorities has occurred on this important matter.
- Support a toxoplasmosis action plan. Acknowledge that the issue of toxoplasmosis is complex and seek a multi-disciplinary and collaborative approach to its development.
- Generally supportive of the proposal to extend the sanctuary and note growing research around the significance of the South Taranaki Bight and also recently identified foraging grounds further offshore for a variety of marine mammal species, including the Pygmy Blue Whale.
- Note that the proposals to extend the current North Island Marine Mammal Sanctuary extent to Wellington, within the coastal marine area out to 12 nautical miles, would identify the entire Taranaki coastal marine area as a marine mammal sanctuary.
- Notwithstanding the above, the submission notes that Council would be concerned if unreasonably prohibitive options were adopted for some of the lesser human-induced impacts, e.g. seismic surveying and seabed mining.
- In relation to seismic surveying, the submission highlights the effectiveness of new and proposed planning instruments to address impacts on marine mammals, namely the *Code of conduct for minimising acoustic disturbance to marine mammals from seismic surveying 2013* and a new controlled activity rule in the *Proposed Coastal Plan for Taranaki* introducing a consenting regime for seismic testing.
- Support options 2 and 4 relating to seabed mining, which would provide a prohibition area consistent with the known range of Māui Dolphins and protecting near shore corridors and dolphin connectivity. However, urge that any prohibitions need to be considered alongside Coastal Plan provisions currently in place and recognizing the role of the Resource Management Act and consenting process for addressing adverse effects on indigenous biodiversity.
- Any restrictions on commercial activities should occur through appropriate economic, cultural and environmental assessments in appropriate legal frameworks, rather than via the narrow, limited and indirect threat management review process.

Decision-making considerations

22. Part 6 (Planning, decision-making and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The

recommendations made in this item comply with the decision-making obligations of the *Act*.

Financial considerations—LTP/Annual Plan

23. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

24. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991* and the *Local Government Official Information and Meetings Act 1987*.

Iwi considerations

25. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.
26. The submission notes there may be impacts on commercial fishing and the exercise of Iwi fishing quota. Customary practices such as fishing practices associated with pataka, that provide fish for cultural purposes, eg tangi, may also be negatively impacted if commercial fishing is impacted. Pataka is a small portion of what is commercially caught. Hence there may be economic and cultural impacts and appropriate consultation is required. However, little consultation with Iwi Authorities has occurred for this important matter.

Legal considerations

27. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Attachment

Document 2315126: Submission on the Proposals for the Hector's and Māui Dolphin Threat Management Plan

19 August 2019
Document: 2292598

Consultation: Hector's and Māui Dolphin Threat Management Plan
Department of Conservation
PO Box 10420
Wellington 6143

Attention: Hector's and Māui Dolphin Threat Management Team

Submission on the Proposals for the Hector's and Māui Dolphin Threat Management Plan

Introduction

1. The Taranaki Regional Council (the Council) thanks the Department of Conservation for the opportunity to make a submission on the Proposals for the Hector's and Māui Dolphin Threat Management Plan (HMTMP). The Council also thanks the Department of Conservation for the time extension for responding to the consultation document. However, given staff involvement in the review of the Regional Coastal Plan and Council meeting schedules, this submission has not been formally endorsed by the Policy and Planning Committee. The submission reflects Council policies and previous submissions on the threats to Hector's and Maui dolphins but it is a draft. The Committee meets on 3 September and changes, if any, to the submission will be immediately provided to the Department at this time.
2. The Council makes this submission in recognition of the purpose of local government set out in the Local Government Act 2002, and the role, status, powers and principles under that Act relating to local authorities. In particular, the Council's comments are made in recognition of its:
 - functions and responsibilities under the *Local Government Act 2002* and the *Resource Management Act 1991* (RMA); and
 - its regional advocacy responsibilities whereby the Council represents the Taranaki region on matters of regional significance or concern.

General comments

3. The Council generally supports the review into protection for Hector's and Māui dolphins and in particular the proposed vision statement and long-term goal set out in the HMTMP. As noted in the Proposed Plan, Hector's and Māui dolphins are found only in New Zealand and together they are one of the world's rarest dolphin species. Targeted effective management is required by the Government to manage the effects of human-induced deaths on these important dolphins.

4. The Council therefore supports the four medium-term goals that have been identified. However, the Council highlights goal 4 [Improve knowledge of poorly understood threats], which is considered particularly important for the overall success of the HMTMP and to ensure that implementation is targeted and appropriate. It is essential that the Department of Conservation and Fisheries New Zealand take responsibility for ensuring and supporting appropriate additional research and investigations.
5. It is extremely important that the Department of Conservation carefully assess the socio-economic effects of any decisions on fishing, oil and gas exploration (who need to be able to use seismic equipment) and seabed mining. Any restrictions on these activities should occur through appropriate economic, cultural and environmental assessments in appropriate legal frameworks, rather than via the narrow, limited and indirect HMTMP process. For fishing the socio-economic and cultural impacts of fishing restrictions in Taranaki need to be proportionate to the risk that the industry poses to the Maui dolphin population, given the spatial risk assessment approach that underpinned this proposal.
6. Specific comments on key areas of interest to this Council are set out below.

Fishing activities

7. Currently, fishing activities such as trawling and set net fishing are regulated by Fisheries New Zealand under the *Fisheries Act 1996* and is outside the jurisdiction of the Council. As such, the Council does not offer comment on this aspect of the proposed HMTMP except to encourage the Department of Conservation to assess the socio-economic effects through a thorough cost benefit analysis of any fishing restrictions to the Taranaki region. Specifically, would the socio-economic impacts of fishing restrictions in Taranaki be proportionate to the risk that the Taranaki fishing industry poses to the Maui dolphin population, given the spatial risk assessment approach that underpinned this proposal?
8. Taranaki iwi hold fishing quota which may be impacted by fishing restrictions imposed through the HMTMP. Customary fishing practices associated with pataka, that provide fish for cultural purposes, eg tangi, may also be negatively impacted if commercial fishing is impacted. Pataka is a small portion of what is commercially caught. Hence there may be economic and cultural impacts and appropriate consultation is required. However, little consultation with Iwi Authorities has occurred for this important matter.

Toxoplasmosis

9. The Council is generally supportive of a toxoplasmosis action plan and acknowledges that the issue of toxoplasmosis is complex and would require a multi-disciplinary and collaborative approach to succeed.
10. The Council, from its own experience, is aware that monitoring techniques take time to develop and even more time to gather data and meaningful information. Thus, the Council is concerned that, if the estimated mortality rate attributed to toxoplasmosis is accurate, then swift intervention will be necessary as the minimum viable population limit could be reached in the very near future, despite other efforts to

address human induced dolphin deaths. Therefore, success is likely to be dependent on whether an appropriate action plan can be developed and implemented in the limited timeframe available. For this reason the Council supports the initiative to refine and prioritize research within 6 months of updating the Proposed HMTMP through collaboration with experts. However, the Council encourages the Department of Conservation to include any regulatory bodies, who are likely to be responsible for monitoring or implementation in the collaboration.

11. Development of an appropriate action plan will require targeted research and monitoring and the Council considers that more information on the toxoplasmosis pathway is necessary.
12. Monitoring of toxoplasmosis in the environment to inform the development of a toxoplasmosis management plan will require resourcing and guidance if it is to be effective and useful. Some options for consideration based on the Council's environmental monitoring experience include, sampling of water or sediment for oocysts or sampling of coastal filter feeders (e.g. green lipped mussels) to determine the presence of toxoplasmosis in the environment and the development of eDNA techniques. As already noted, the Council considers that further sector engagement in this area will be required.
13. The consultation document does not address public engagement on toxoplasmosis. Noting that the success of any action plan will depend on implementation, at different levels by a number of organisations that have responsibilities to the wider community, the Council consider that a public engagement strategy will also be necessary. Further, in order for effective implementation, the Council considers that strong direction and support (including funding) from Central Government will be necessary to ensure community buy in, ongoing support and potential programme success.

Sanctuary extensions

14. The consultation document suggests an extension to the current North Island Marine Mammal Sanctuary extent to Wellington within the coastal marine area out to 12 nautical miles. This extension would identify the entire Taranaki coastal marine area as a marine mammal sanctuary.
15. While the Council is generally supportive of the proposal to extend the sanctuary, due to growing research around the significance of the South Taranaki Bight and also recently identified foraging grounds further offshore (due to local upwelling) for a variety of marine mammal species, including the Pygmy Blue Whale, it does have concerns for other potential implications of the extension. In particular seismic surveying and seabed mining as is discussed below, especially if unreasonably prohibitive options were adopted.

Seismic surveying

16. It is not clear whether the options provided in the HMTMP, relating to seismic surveying, adopt the proposed sanctuary extensions or refer to the current area. Clarification is required.

17. The Council recognises the risks to marine mammals (and other biodiversity) associated with exposure to seismic surveying. However, the Council considers that an appropriate method for avoiding effects on marine mammals has been established through the *Code of conduct for minimising acoustic disturbance to marine mammals from seismic surveying 2013* (the 'code of conduct' or the 'code').
18. The Council understands that voluntary compliance with the code is high within territorial waters. Therefore, the Council questions what additional benefit would be gained from option 1. It would appear that this compliance requirement is less than is currently being achieved voluntarily.
19. Regarding option 2, the Council already considers that a permitting system is appropriate for seismic surveying to address adverse effects on indigenous biodiversity. Through the review of the Coastal Plan for Taranaki, the Council is seeking to introduce a new controlled activity rule for seismic surveying in all coastal management areas of the Taranaki coast. The rule will require that all seismic surveying operations obtain a resource consent, requiring them to comply with the code of conduct as well as meeting other environmental conditions ensuring no adverse effects on significant indigenous biodiversity and no significant adverse effects on scheduled taonga species. This approach, even if the sanctuary extents are enlarged as proposed, is closely aligned with option 2.
20. A consistent seismic permitting regime is preferred across the entire Taranaki Coastal Marine Area, as this most closely aligns with currently proposed provisions and approach of the Council for managing any adverse effects of seismic surveying. The Council considers that any permitting process should be developed in conjunction with the Council in order to ensure alignment between the Council and the Department of Conservation and to streamline the process for potential applicants. Given the properties of sound underwater, it is suggested that a permitting system be applied to any survey that is likely to exceed a prescribed sound threshold within the sanctuary, irrespective of whether the survey is taking place within or outside the sanctuary.
21. The Council considers that option 3, which would prohibit seismic surveying in marine mammal sanctuaries, is unnecessarily prohibitive, especially if the North Island Marine Mammal Sanctuary were to be extended as proposed. This approach is considered extreme given that there is no evidence of a resident population south of Cape Egmont, that adverse effects are generally temporary, and that the effects could be adequately addressed through targeted locational and seasonal restrictions. The Council considers that option 3 should only be considered if other options cannot be implemented and there is a strong evidential basis for the Hector's and Māui dolphins utilizing the proposed areas and being adversely affected by the activity.

Seabed mining

22. The Council recognises that seabed mining activities are long lived, in the order of years as opposed to days to months for seismic surveying, and as such appropriate management of the activity is required to ensure adverse effects on the Māui Dolphin are avoided over the life of the activity.

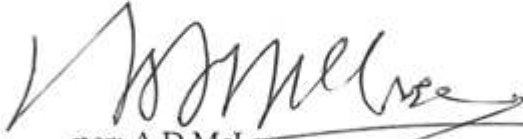

23. Within territorial waters the Council is responsible for managing disturbance activities such as seabed mining under the *Resource Management Act 1991*. The current *Coastal Plan for Taranaki* addresses seabed mining through general disturbance rules as discretionary or non-complying, depending on the scale of the activity and the location. Under the *Proposed Coastal Plan for Taranaki*, seabed mining would be addressed as discretionary in the Open Coast, Port and Estuaries Modified areas and non-complying in areas of Outstanding Value and Estuaries Unmodified. The discretionary and non-complying activity classification allows the Council to impose conditions on a case-by-case basis in line with the policies of the Plan or decline a consent application, if the applicant cannot demonstrate that the activity would not be able to meet the requirements of the objectives and policies.
24. Of particular note, the Proposed Coastal Plan includes policies specific to the protection of indigenous biodiversity, Policies 14, 14A and 14B (which are appended to this submission). Policy 14 [Significant indigenous biodiversity] is particularly relevant as it requires the avoidance of adverse effects on the Maui Dolphin (amongst other indigenous biodiversity scheduled within the Plan) and 'areas containing nationally significant examples of indigenous community types'.
25. Through the Coastal Plan review process the Council has considered different options for the management of activities such as seabed mining. For this activity the Council has not adopted a prohibitive stance, even for vulnerable areas such as estuaries and outstanding value areas, and has continued to address the activity as non-complying. The non-complying activity classification signals that the Council generally considers this activity to be inappropriate in the areas identified, however, does not place a prohibition outright. Instead, the Council would require an applicant to prove that the activity is not contrary to the objectives and policies of the Plan, ensuring a very high test and allowing the Council to decline the application if all the policy criteria are not met. Furthermore, the Proposed Coastal Plan requires the adoption of a precautionary approach where the effects of an activity are uncertain, unknown or little understood but potentially significant, strengthening the test further.
26. Notwithstanding the above, the Council does not oppose the introduction of additional prohibition areas to ensure Māui and Hector dolphins are adequately protected. In particular the Council would support options 2 and 4 which would provide a prohibition area consistent with the known range of Māui Dolphins and protecting near shore corridors and dolphin connectivity. However, the Council considers that any prohibitions need to be considered alongside the respective Coastal Plan provisions currently in place throughout the region.

Conclusion

27. The Council reiterates that it is extremely important that the Department of Conservation carefully assess the socio-economic effects of any decisions on fishing, oil and gas exploration (who need to be able to use seismic equipment) and seabed mining. Any restrictions on these activities should occur through appropriate economic, cultural and environmental assessments in appropriate legal frameworks, rather than via the narrow, limited and indirect HMTMP process.

28. The Council again thanks the Department of Conservation for the opportunity to submit on the Proposed Threat Management Plan for Hector's and Māui Dolphins. Further work and engagement are required before any plans are finalised and then implemented.
29. The Council looks forward to engaging further on this important matter.

Yours faithfully
BG Chamberlain
Chief Executive

per: A D McLay
Director - Resource Management

Appendix 1

These policy provisions are subject to change prior to adoption by the Council following the hearing of the Proposed Coastal Plan for Taranaki.

Policy 14: Significant indigenous biodiversity

Protect significant indigenous biodiversity in the coastal environment by:

- (a) avoiding adverse effects of activities on:
 - (i) indigenous taxa that are nationally threatened or at risk, or regionally distinctive, including those identified in Schedule 4A;
 - (ii) taxa that are internationally threatened including those identified in Schedule 4A;
 - (iii) indigenous ecosystems and vegetation types that are threatened in the coastal environment, or are naturally rare, as identified in Schedule 4A;
 - (iv) habitats of indigenous species where the species are at the limit of their natural range, or are naturally rare;
 - (v) areas containing nationally significant examples of indigenous community types; and
 - (vi) areas set aside for full or partial protection of indigenous biological diversity under other legislation; and
- (b) avoiding significant adverse effects and avoiding, remedying and mitigating other adverse effects of activities on:
 - (i) areas of predominantly indigenous vegetation in the coastal environment;
 - (ii) habitats in the coastal environment that are important during the vulnerable life stage of indigenous species including:
 - i. estuaries;
 - ii. spawning areas (e.g. snapper-trevally spawning area in the North Taranaki Bight between Mōhakatino River and Pariokariwa Point);
 - iii. areas that provide passage for diadromous species;
 - iv. marine mammal resting, feeding and breeding areas; and
 - v. bird roosting and nesting areas;
 - (iii) indigenous ecosystems and habitats found only in the coastal environment and which are particularly vulnerable to modification including estuaries, lagoons, coastal wetlands, dunelands, intertidal zones, rocky reef systems, eelgrass, saltmarsh, and sensitive marine benthic habitats as identified in Schedule 4B;
 - (iv) habitats of indigenous species in the coastal environment that are important for recreational, commercial, traditional or cultural purposes;
 - (v) habitats, including areas and routes, that are important to migratory species; and
 - (vi) ecological corridors and areas important for linking or maintaining biological values identified under this policy, including Significant Marine Animal and Seabird Areas identified in Schedule 4C.

Policy 14A: Indigenous biodiversity

Maintain and enhance indigenous biodiversity generally in the coastal environment by:

- (a) as far as is practicable, avoiding, remedying and mitigating the adverse effects of activities on indigenous biodiversity; and
- (b) when assessing adverse effects on indigenous biodiversity, having regard to the extent of effects, including consideration of:
 - (i) the association of the ecological site and values with other interrelated, but not necessarily contiguous, ecological sites and values;
 - (ii) the nature, location, extent and design of the proposed development and the effects of these factors on indigenous biodiversity;
 - (iii) the degree to which indigenous biodiversity values will be lost, damaged, destroyed, or enhanced, recognising that;
 - i. the scale of the effect of an activity is proportional to the size and sensitivity of the ecological area and associated indigenous biodiversity values;
 - ii. discrete, localised or otherwise minor effects not impacting on the ecological area may be acceptable; and
 - iii. activities with transitory effects may be acceptable, where they can demonstrate the effects are not long-term and/or irreversible.

Policy 14B: Taonga species

Maintain or enhance taonga species as identified in Schedule 4CC by:

- (a) avoiding significant adverse effects of activities on the habitat of taonga species, mahinga kai, tāiapure or mataitai and customary uses and values unless:
the activity is necessary for the provision of regionally important infrastructure, avoidance of adverse effects is not practicable and adverse effects are remedied or mitigated to the extent practicable; and
- (b) avoiding, remedying or mitigating other adverse effects of activities on taonga species habitat, mahinga kai, tāiapure or mataitai.

Agenda Memorandum

Date 3 September 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

Subject: Coastal occupation charges

Approved by: A D McLay, Director – Resource Management

B G Chamberlain, Chief Executive

Document: 2304923

Purpose

1. The purpose of this memorandum is to seek Members' agreement that the Taranaki Regional Council (the Council) not charge for the occupation of coastal space in the coastal marine area (CMA).

Executive summary

2. The Council has commenced a review of its current Regional Coastal Plan for Taranaki under the *Resource Management Act 1991* (the RMA). The Coastal Plan is the rulebook addressing the Council's statutory functions relating to the coastal marine area, including occupation of the foreshore and seabed.
3. Any 'fixture' in the CMA allowed by a regional rule or resource consent that prevents others from using that space constitutes an 'occupation'. Once a jetty or other such structure has been built it will preclude or potentially restrict other activities or structures taking place in that exact spot. Types of occupations include moorings, marinas, jetties, wharves, sheds, boat ramps, marine farms, utilities, pipelines and erosion protection structures.
4. An amendment to the RMA, subsequent to the adoption of the current Coastal Plan, gave regional councils the opportunity of introducing a charging regime for the occupation of coastal space within the coastal marine area. Section 64A of the RMA now requires that in preparing or changing their coastal plan, regional councils must consider whether or not a coastal occupation charging regime will apply to persons who occupy any part of the CMA after having had regard to:
 - (a) the extent to which public benefits from the CMA are lost or gained; and
 - (b) the extent to which private benefit is obtained from the occupation of the CMA.
5. If a regional council considers that a coastal occupation charging regime should not be included, a statement to that effect must be included in their coastal plan. To date, the Council has not sought to charge for the occupation of coastal space in the CMA and it

is recommended that a statement to this effect be included in the *Proposed Coastal Plan for Taranaki*.

6. In Taranaki, there is a low number of occupation consents in the CMA, the extent to impact on public access is only minor, and consent conditions have generally been applied allowing free public access except where it is a matter of public safety.
7. The Council has comprehensive compliance monitoring in place for coastal permits and results are publically reported to the community. The monitoring is paid for by the consent holder and an occupation charge, albeit for a different purpose, would be an additional charge. Elsewhere in New Zealand, occupational charges are the only charge levied.
8. On the basis that there are relatively few occupation consents and matters relating to public access can be addressed through coastal permit conditions, it is recommended that the Council not introduce an occupational charging regime in the review of the current Coastal Plan.

Recommendations

That the Taranaki Regional Council:

- a) receives this memorandum entitled *Coastal occupation charges*;
- b) notes that in Taranaki there is a low number of occupation consents in the CMA, the extent to impact on public access is only minor, and consent conditions have generally been applied allowing free public access except where it is a matter of public safety; and
- c) agrees that the Council forego charging for occupation of coastal space in the CMA.

Background

9. The Council is currently reviewing its current *Regional Coastal Plan for Taranaki* under the RMA. The current Coastal Plan was the first produced by the Council and is the rulebook addressing the Council's statutory functions relating to the coastal marine area, including occupation of the foreshore and seabed.
10. Section 2 [Interpretation] of the RMA defines 'occupy' as follows:
"Occupy means the activity of occupying any part of the coastal marine area -*
(a) where the occupation is reasonably necessary for another activity; and
(b) where it is to the exclusion of all or any class of persons who are not expressly allowed to occupy that part of the coastal marine area by a rule in a regional coastal plan and in any relevant proposed regional coastal plan or by a resource consent; and
(c) for a period of time and in a way that, but for the rule in the regional coastal plan and in any relevant proposed regional coastal plan or the holding of a resource consent under this Act, a lease or licence to occupy that part of the coastal marine area would be necessary to give effect to the exclusion of other persons, whether in a physical or legal sense."
11. Any 'fixture' in the CMA allowed by a regional rule or resource consent that prevents others from using that space constitutes an 'occupation'. Once a jetty or other such structure has been built it precludes or potentially restricts other activities or structures taking place in that exact spot. Types of occupations include moorings, marinas, jetties,

wharves, sheds, boat ramps, marine farms, utilities, pipelines and erosion protection structures.

12. Under Section 12(2) of the RMA, no person may occupy any part of the coastal marine and coastal area unless expressly allowed by a national environmental standards, a regional rule or a resource consent. It is Council practice that any consent application for a structure in the CMA must address the erection and placement of the structure plus the ongoing occupation of space in the CMA.¹ This makes sense because any structure does occupy some space, and can potentially restrict public access to that part of the CMA.
13. Section 122 (5) of the RMA states that no coastal permit shall be regarded as an authority for the holder to occupy a coastal marine land to the 'exclusion' of other people unless a coastal permit expressly provides otherwise.
14. The *Resource Management Amendment Act 1997* gave regional councils the opportunity of introducing a charging regime for the occupation of coastal space within the coastal marine area. The amendment placed a responsibility on councils to place a statement in their coastal plans, either to set out a charging regime or to say they will not do so. The RMA also specified that any money so collected must be spent on the sustainable management of the coastal marine area.
15. Of note, the Council has comprehensive compliance monitoring in place for coastal permits and results are publically reported to the community. The monitoring is paid for by the consent holder and an occupation charge, albeit for a different purpose, would be an additional charge. Elsewhere in New Zealand, occupational charges are the only charge levied.

Need to identify any coastal occupation charges in the Plan

16. Section 64A of the RMA requires that in preparing or changing a coastal plan, regional councils must consider whether or not a coastal occupation charging regime will apply to persons who occupy any part of the CMA after having had regard to:
 - (a) the extent to which public benefits from the CMA are lost or gained; and
 - (b) the extent to which private benefit is obtained from the occupation of the CMA.
17. Pursuant to section 64A(2) of the RMA, if a regional council considers that a coastal occupation charging regime should not be included, a statement to that effect must be included in the coastal plan. Conversely, under Section 64A(3) of the RMA, if a regional council considers that a coastal occupation charging regime should be included, the council must after having regard to the matters set out above, specify in the plan-
 - (a) the circumstances when a coastal occupation charge will be imposed; and
 - (b) the circumstances when the regional council will consider waiving (in whole or in part) a coastal occupation charge; and

¹ *Hume vs Auckland Regional Council related to the public use of a private jetty. The decision concluded that unless expressly provided, a coastal permit authorising occupation of the CMA does not authorize the exclusion of the public from using the jetty for access to, from and along the foreshore of the CMA.*

- (c) the level of charges to be paid or the manner in which the charge will be determined; and
- (d) in accordance with subsection (5), the way the money received will be used.²
18. The current *Regional Coastal Plan for Taranaki* does not address coastal occupation charges as the RMA requirement to do so was introduced after the adoption of the Plan. However, the question of whether the Council should impose a coastal consenting charging regime was considered at the Policy and Planning Committee meeting of 12 June 2008, as part of the interim review of the Coastal Plan.
19. As reported to Council at that time, no person providing feedback commented on coastal occupation charges being imposed by way of the current Coastal Plan, occupation of coastal space was confirmed as not a significant issue, and it was noted that it is not intended that the Plan would include such provisions.³
20. In submissions and written evidence received from the Department of Conservation on the Proposed Coastal Plan, the Department has sought amendments to the *Proposed Coastal Plan for Taranaki* to clarify Council's position on coastal occupation charges in accordance with Section 401A (4) of the RMA. Section 401A (4) reads as follows:
- "Where no provision for coastal occupation charges has been made in a regional coastal plan or proposed regional coastal plan by the expiry date, the regional council must, in the first proposed regional coastal plan or change to a regional coastal plan notified on or after the expiry date, include a statement or regime on coastal occupation charges in accordance with section 64A."*
21. In evidence presented to the Hearing Panel of submissions on the Proposed Coastal Plan for Taranaki, the Department of Conservation subsequently questioned whether the Council has undertaken the necessary statutory steps prescribed by Section 64A of the RMA. Notwithstanding earlier considerations as part of the interim review of the Coastal Plan, for the purposes of certainty and clarity, this item has been prepared so that the Council can explicitly record their consideration of coastal occupation charges and document their decision to the satisfaction of the Minister of Conservation.

Review of coastal occupation charges

22. The premise underlying coastal occupation charges is that exclusive occupation of the coastal marine area is a privilege not a right - it is public space over which everyone has a right of access, and if used so as to exclude others a similar option of use, the public should be compensated for that exclusion and loss of opportunity.
23. Most occupations in the CMA will result in elements of both public and private benefit, and the extent to which they are exclusive will vary. The identification of benefits (public/private) is limited to those directly arising from a structure that is occupying the space, not the associated activity that is facilitated by that structure being present.

² Section 64A(5) of the RMA states that any money received by the regional council from a coastal occupation charge must be used only for the purpose of promoting the sustainable management of the CMA.

³ Council undertook targeted consultation on the draft findings of the interim review into the efficiency and effectiveness of the current Coastal Plan. Comments and feedback were received from 17 individuals and organisations, including the Department of Conservation.

The benefits or otherwise of the associated activity are assessed through the coastal permit process.

24. The *Submarine Cables and Pipelines Protection Act 1996* can restrict fishing and anchoring in the CMA and Exclusive Economic Zone to protect important infrastructure protection and for safety and environmental reasons. Applications have been made and granted for pipelines associated with the Kupe, Maui and Pohokura fields and for submarine cables. While these restrict activities, they are not part of any RMA consideration.
25. Of note, a review of Council's database, confirms that there is only a relative small number of consents in the CMA that have conditions excluding or restricting public access (refer Table 1). A survey of the consent database shows there are 194 coastal permits that include occupation. Most of these are for erosion protection structures.

Table 1: Examples of coastal permits with restricted public access conditions

Consent no.	Consent holder	Activity	Comment on consent conditions
4432	Port Taranaki	Port area	Public access only prohibited where reasonably necessary to allow safe operation and management of the Port.
5666	Telstra Saturn Ltd	Cable	Public access only restricted during construction, inspection or maintenance of the structure for safety purposes.
5991	Shell Exploration NZ Ltd	Pohokura pipelines and structures	Public access not permitted within 50m of platform. Apart from that area, free passage has to be provided except for safety purposes during construction, inspection, maintenance or removal. Restriction of public access at foreshore only for safety requirements related to construction, inspection, maintenance or removal
6916	Muggerage	Small seawall	Occupation of the small seawall that is generally covered in sand. There are 51 consents in place at Messenger Terrace, one for each property even though they all link together.
6533	Origin Energy Resources	Kupe pipelines and structures	Public access only restricted for safety purposes during construction, inspection, maintenance or removal of the structure.
3990	Opunake Boating & Underwater Club	Opunake boat ramp	Public can at all times have free ingress, passage and egress into, through, over and out of the consent area and to have reasonable access to and use of the facilities, except for the purposes of launching, berthing and/or maintaining boats.
4298	Cape Egmont Boat Club	Cape Egmont boat ramp	Public access and use of boat ramp required except for: commercial fishing vessels and heavy machinery, casual launching of any craft that cannot meet the appropriate safety standards, and access to the boat ramp and jetty during adverse sea conditions.

26. It should be noted that no coastal occupation charges are levied on the above coastal permits. The majority of these consents are relatively small and only restrict public access for purposes of safety and generally allow free passage or use of the structure.
27. A regime for charging for the occupation of coastal space, that properly takes into account the scale of the occupancy, such as the amount of coastal space occupied, as well as distinguishing private versus public benefit would be overly complex,

administratively difficult to administer, and not warranted given the size of the 'problem' in Taranaki. Any charging regime would be required to address all the circumstances in which charges will be imposed (and possibly waived), the level of charges, and use of monies received, as well as take into account the varying scales of the occupancy, such as the amount of coastal space occupied, as well as the private versus public benefit. To date there has been no demand for such a regime.

28. Also of concern, is the lack of national consistency in the way the charges are established (e.g. an agreed approach to valuation and charge levels). Hence very few councils around New Zealand so far have decided to adopt coastal occupation charges. Councils managing the aquaculture industry have direct experience in setting occupational charges and note these can be contentious and difficult to quantify.
29. The proposed Plan was silent on the matter of coastal occupation charges. In line with recommendations set out in the Hearing Panel's report (refer to separate item), it is recommended that Council consider this item and agree to amend Section 9 of the *Proposed Coastal Plan for Taranaki* by including an explicit statement that read as follows: "...the Council is not operating a charging regime for occupation of the coastal marine".

Decision-making considerations

30. Part 6 (Planning, decision-making, and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the Act.

Financial considerations—LTP/Annual Plan

31. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

32. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991*, the *Local Government Official Information and Meetings Act 1987*, and the *Biosecurity Act 1993*.

Iwi considerations

33. This memorandum and the associated recommendations are consistent with the Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

34. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Agenda Memorandum

Date 11 June 2019

**Memorandum to
Chairperson and Members
Policy and Planning Committee**

**Subject: Approval of Proposed Coastal Plan for
Taranaki**

Approved by: A D McLay, Director – Resource Management
B G Chamberlain, Chief Executive

Document: 2295571

Purpose

1. The purpose of this memorandum is to introduce for Members' consideration the Hearing Panel's report and recommendations on the *Proposed Coastal Plan for Taranaki* (Proposed Coastal Plan) and to recommend the adoption of that report.
2. Attached separate to the Agenda, is a copy of the Hearing Panel's report, which contains the further written submissions and evidence tabled at the hearing, and the Section 32AA Evaluation Report.
3. Officers will be making a PowerPoint presentation to provide an overview on key issues and recommended changes arising from the Coastal Plan review. Members are not expected to read the detailed Hearing Panel report and decisions in full (500 + pages) and should be able to rely on the fact the decision has been made by an accredited Hearing Panel. There has been some detailed considerations to complex planning matters. Council officers have summarised the Hearing Panel's decisions and the changes proposed to allow Members to consider these and, if necessary, follow these up in the actual decision.

Executive summary

4. The Taranaki Regional Council (the Council) has commenced a review of its current *Regional Coastal Plan for Taranaki* under the *Resource Management Act 1991* (the RMA).
5. On 24 February 2018, the Council publicly notified the Proposed Coastal Plan and called for submissions. Council received 61 submissions by the closing date of 27 April 2018.
6. A summary of submission was then prepared and publicly notified and cross-submission (or 'further' submission) called for. Council received 25 further submissions in support or opposition to the initial submissions by the closing date of 4 August 2018.

7. Following comprehensive pre-hearing consultation, the hearing of submissions and deliberations on the Proposed Coastal Plan was held on 24 July, 1 August and 12 August 2019.
8. The Council provided an opportunity for submitters to present their views in person to the Hearings Panel. The Council appointed two accredited Committee members and one other independent accredited person to hear and make recommendations on submissions.
9. The Hearing Panel heard 15 submitters, representing a broad range of interests including government departments, non-government organisations, network utilities, industry, tangata whenua and individuals. Six submitters did not speak at the hearing but tabled further evidence in support of their submissions.
10. The original submissions raised 1,360 matters the Hearing Panel had to consider and determine. Additional matters were also raised and considered through further submissions and the evidence tabled at the hearing.
11. After the hearing of submissions, Panel members deliberated and instructed officers to prepare their report and recommendations to Council on the Proposed Coastal Plan. A copy of the Hearing Panel's report is attached.
12. In addition to the Hearing Panel's report, Council must also consider the Section 32AA Report. The Section 32AA Evaluation Report addresses those key changes that have occurred through the submission and hearing processes that were not considered by the Council under the initial Section 32 evaluation. A copy of the Section 32AA report is also attached to this agenda.
13. In brief, through submissions, pre-hearing meetings, and the hearing of submissions a number of small but important changes have been recommended, that should ensure that the Council builds on its efforts to promote sustainable management in the coastal environment, including Taranaki's coastal marine area. Other changes have also been recommended to improve the readability or clarify policy intent in relation to many Plan provisions.

Recommendations

That the Taranaki Regional Council:

- a) receives this memorandum, the Hearing Panel's report, the track change version showing recommended changes to the Proposed Coastal Plan, and the Section 32AA Report;
- b) considers the Section 32AA Evaluation Report and confirms that the Council is satisfied that any changes to the policies, rules and methods set out in the Proposed Plan are the most appropriate way to achieve the objectives of the Plan;
- c) adopts the recommendations set out in the Hearing Panel's report in relation to changes to the Proposed Coastal Plan; and
- d) notes that following the Council, at its meeting on 24 September, making its decisions on the Proposed Coastal Plan, a decisions document will be made

available to all submitters and submitters have 30 working days from service of the Council's decisions to appeal to the Environment Court against the Council's decisions should they wish.

Background

14. As Members are aware, the Council has commenced a review of its current *Regional Coastal Plan for Taranaki* under the RMA. The current Coastal Plan was the first produced by the Council and is the rulebook addressing the Council's statutory functions relating to the coastal marine area. The coastal marine area or CMA relates to the wet bit of the coast. Its landward boundary is the mean high water mark and it extends seaward to 12 nautical miles, 22 km.
15. The Proposed Coastal Plan was the culmination of a comprehensive consultative and engagement process involving considerable extensive early engagement with key stakeholders and tangata whenua, including consultation on a draft Proposed Coastal Plan.
16. The Proposed Coastal Plan included a number of significant changes from the current Coastal Plan such as:
 - greater recognition of cross-boundary effects, where activities undertaken landward of the CMA may impact on values within the CMA and vice versa;
 - recognising more coastal areas of outstanding value;
 - increased recognition of Māori values, including a schedule of known sites with high cultural, spiritual and historical associations;
 - increased protection for 140 named surf breaks, including a 'Significant Surfing Area' and schedule of nationally, regionally and locally significant surf breaks;
 - increased protection for indigenous biodiversity and areas of outstanding value;
 - prohibiting discharges of untreated human sewage and new discharges of wastewater containing human waste into estuaries;
 - requiring existing coastal wastewater discharges to improve water quality and reduce in quantity over time;
 - requiring improvement in coastal water quality where the quality has deteriorated to the extent that there are significant adverse effects on ecosystems, natural habitats, or water based recreational activities, or it is restricting existing uses;
 - increased recognition and provision for regionally significant infrastructure and activities, subject to appropriately managing adverse effects;
 - bundling of activities within rules to streamline regulatory requirements and ensuring the fuller consideration of effects; and
 - increased controls on hard protection structures to manage coastal natural hazards.
17. In February 2018, the Proposed Coastal Plan was publicly notified and submission called for. Sixty-one submissions were received by the closing date of 27 April 2018. Officers analysed the submissions and prepared a summary of submissions. This was considered by Members at the Policy and Planning Committee meeting of 17 July 2018. The summary of submission was publicly notified on the 21st of July and further

submission called for. Council received 25 further submissions in support or opposition to the initial; submissions by the closing date of 4 August 2018.

18. The Council provided an opportunity for every person who makes a submission and who request to present their views in person to a Hearings Panel, to be so heard.
19. Following receipt of further submissions, officers commenced pre-hearing discussions and consultation to potentially work through the issues raised. To assist pre-hearing discussions:
 - Council officers prepared an Officers Report, which, in relation to each issue raised by submitters, set out officers' preliminary responses to and recommendations on how the Council might address matters raised by the submissions;
 - the Officers Report was distributed to all submitters as a basis for pre-hearing discussions with submitters and submitters were contacted to see whether they were interested in meeting or discussing matters raised in their submissions; and
 - where there was interest, officers met with submitters to discuss and, if possible, resolve or narrow down any issues raised by the submissions.
20. This pre-hearing process allowed all submitters to be informed of possible changes and to enable all submitters to consider these changes in light of their own submission and the need to attend a hearing of submissions. The first pre-hearing between officers and a submitter occurred on 12 October 2018 with other meetings occurring up to 21 June 2019. Council officers met with 28 submitters, and or their representatives, to discuss their submissions and any changes recommended to the Proposed Plan. These meetings allowed submitters to further clarify their concerns, discuss proposed relief and explore any alternative relief options where appropriate. The opportunity to reconsider officers' preliminary recommendations in light of this engagement was useful and resulted in a number of changes in officer recommendations that were incorporated into a Section 42A Officers Report on the Plan.

The hearing of submissions

21. Following pre-hearing consultation, the hearing of submissions and deliberations on the Proposed Coastal Plan was held on 24 July, 1 August and 12 August 2019.
22. Member will recall that the Council, acting under section 34A of the RMA, appointed three experienced hearing commissioners to hear, consider and make recommendations to it on the submissions on the Proposed Plan. The Council delegated to the Hearing Panel all its functions, powers and duties to hear and consider submissions on the Proposed Coastal Plan, including requiring and receiving reports under section 42A and exercising powers conferred by sections 41B and 41C of the RMA.
23. On Wednesday 24 July and Thursday 1 August 2019, the Hearing Panel met to hear submissions made to the Proposed Coastal Plan. Only Committee members or other accredited persons under the Making Good Decisions programme can be considered when selecting a hearings committee. The three accredited hearing commissioners appointed to the Hearing Panel, were Cr Michael Joyce (as Chair), Cr Neil Walker, and Rawiri Faulkner (the later being appointed as an independent hearing commissioner

with tikanga Maori expertise). Consultation with iwi authorities occurred in relation to the appointment of Hearing Commissioner Rawiri Faulkner.

24. Fifteen submitters appeared at the hearing in support of their submissions. They were Taranaki Energy Watch, Ms Pratt, Department of Conservation, Oil Companies and Powerco (joint evidence), Fonterra, Te Korowai o Ngaruahine, Ngati Rahiri Hapū, Te Kotahitanga o te Atiawa, Te Kaahui o Rauru, Fay Mulligan and Monique Takarangi, Royal Forest and Bird Society, Port Taranaki, New Zealand Defence Force, and PEPANZ. The Hearing Panel heard the further written and oral submissions from those submitters who appeared in person at the Hearing. Panel members also asked questions of submitters regarding their evidence.
25. Six submitters did not appear but tabled further written submissions or evidence at the hearing. They were Taranaki Federated Farmers, First Gas, Meridian Energy, Heritage New Zealand, Transpower and Trans Tasman Resources.
26. Key themes and discussion points raised by the submitters that presented to the hearing are summarised as follows:
 - **Taranaki Energy Watch:** Highlighted concerns regarding the impacts of oil and gas activities in the coastal environment and seeking the bundling of rules relating to oil and gas exploration and production activities and for the activities to be discretionary or non complying.
 - **Ms K Pratt:** Support for the Project Reef being identified as an Outstanding Value coastal management area.
 - **Department of Conservation:** Sought amendments to include criterion policies identifying high natural character, minor changes to rules addressing biofouling, and new methods addressing advocacy to district councils regarding dog control and Council investigating whether or not it will have occupational coastal charges.
 - **Oil Companies and Powerco (joint evidence):** Highlighted the importance of the oil and gas and electricity transmission industries to the region. Broadly supportive of the Plan but sought additional amendments to ensure their activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions.
 - **Fonterra:** Generally supportive of the Plan but sought additional amendments to ensure Fonterra activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions.
 - **Te Korowai o Ngaruahine:** Generally supportive of the Plan noting it is broadly “in a good place” but sought additional amendments to highlight Council commitment to protecting and monitoring tangata whenua values, and concerns relating to subjective terms adopted in rule standards, terms and conditions.
 - **Ngati Rahiri hapū:** Strongly opposed to permitted activity rules that are on or above reefs in their rohe. Sought that permitted activity rules be changed to a discretionary activity to give effect to Treaty of Waitangi, unless it is for customary uses. Submitter noted that the issue is about being part of the decision making and notification process.
 - **Te Kotahitanga o te Atiawa:** Noted Plan scope largely reflects most tangata whenua values but sought further amendments to underpin the protection of tangata whenua values.

- **Te Kaahui o Rauru:** Acknowledged reliefs agreed to in the Section 42A Officers Report, including the addition of guiding tangata whenua principles, but sought additional amendments to the Plan such as amendments to Policy 8 [Areas of Outstanding Value], and Policy 13 [Relationship with tangata whenua], Rules 22 , 26, 54 and 85, plus reparation mechanisms in Section 9 [Financial contributions] to protect, maintain or restore cultural and historic sites of significance to Maori.
 - **Fay Mulligan and Monique Takarangi:** Concerned that mapped Significant Surf break Area includes Maori Reservation and highlighted some surf break names as culturally offensive. Also highlighted problems related to freedom camping and public access and the risks to their land and sites of significance.
 - **Royal Forest and Bird Society:** Sought additional amendments to grant reliefs sought in their original submission to ensure the Plan gives effect to the *New Zealand Coastal Policy Statement* (e.g. identification of areas of high natural character and significant indigenous biodiversity) and other changes to Plan provisions to improve the certainty and clarity of provisions to protect indigenous biodiversity values.
 - **Port Taranaki:** Sought additional amendments to ensure Port Taranaki activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions. The submitter further sought that the Breakwater surf break be deleted from the Plan
 - **New Zealand Defence Force (NZDF):** Opposed the biofouling rules being applied only to the Port and sought amendments to the general standards for noise relating to temporary military training activities to align with reliefs sought by NZDF in other plans around the country.
 - **Petroleum Exploration and Production Association of NZ:** Suggest oil and gas activities are appropriately recognised and provided for in the Plan but sought additional amendments to improve the certainty and clarity of Plan provisions, particularly in relation to policies addressing oil and gas activities [Policy 29] and the removal of coastal structures [Policy 38] and other relevant Rules 26 and 27.
27. Following the presentations and tabling of further written evidence, the Hearing Panel then deliberated and made decisions on recommendations, firstly in relation to the 15 submissions heard at the hearing, secondly in relation to the tabled written correspondence from the six submitters who did not wish to appear at the hearing but wished to have their further written submissions or evidence considered as part of the hearing process, and thirdly deliberations and decisions on officer recommendations on all submissions as set out in the report: *Proposed Coastal Plan for Taranaki: Section 42A Report*, (the Section 42A Officers Report).
28. The Hearing Panel reached decisions on all submissions and instructed officers to prepare the attached report setting out the Panel's deliberations and recommendations to the Council.
29. The original submissions raised 1,360 matters that the Hearing Panel had to consider and determine. Additional matters were also raised and considered through further submissions and in relation to the evidence tabled at the hearing

The Hearing Panel's report

30. The attached Hearing Panel report records the hearing process and the outcome of the deliberations of the Panel on the submissions made on the Proposed Coastal Plan, including the written correspondence and evidence tabled at the hearing.
31. In response to submissions and further submissions received on the Proposed Plan, several major changes are recommended by the Hearing Panel to the Proposed Plan. These changes are summarised as follows:
- **Tangata whenua principles:** Inclusion of agreed tangata whenua principles in the Plan that are aligned and/or given effect to though relevant Plan objectives, policies, rules and schedules.
 - **Subdivision:** Amend Objectives 1, 3, 6, 7 and 11; and Policies 2, 5, 8 and 15 of the Proposed Plan to reference and require explicit consideration of the effects of subdivision within the coastal environment.
 - **Coastal environment line mapped:** Amend Policy 4 (and associated Planning maps) to identify the extent of the coastal environment on Planning maps based on their equivalent in relevant district plans (i.e. Coastal Protection Area identified the Proposed District Plan for South Taranaki and the Coastal Hazard Area identified in the Draft District Plan for New Plymouth).
 - **The balance of protective policies against the use and development policies:** The *New Zealand Coastal Policy Statement* (NZCPS) is particularly directive towards protection of the coastal environment and some submitters were concerned with how the needs of the national grid (and other regionally important infrastructure) would be balanced against the need to protect specific values. After hearing submissions, the Hearing Panel recommends a new Policy 6A, to better align with the *National Policy Statement on Electricity Transmission* (which provides direction specific to managing the effects of the National Grid).
 - **Indigenous biodiversity:** Amend Policy 14 [Significant indigenous biodiversity] to explicitly identify significant marine animal and seabird areas, amend Plan to include a new Policy 14A to addresses other indigenous biodiversity, and amend Planning map (and other consequential changes to the Plan) to identify known significant indigenous biodiversity areas.
 - **Sewage discharge rules:** A number of iwi submitters were strongly opposed to allowing any new discharges of treated human sewage to the open coast (even as a consented activity). After hearing submissions, the Hearing Panel recommends addressing these concerns by prohibiting any new discharges of treated human sewage to the CMA but would continue to provide for existing treated wastewater discharges (subject to a consenting process).
 - **Seismic surveying rule:** The Proposed Plan included a permitted activity rule for seismic testing. A submitter identified that there are possible adverse effects towards the little blue penguin that annually migrates to the South Taranaki Bight for feeding. Recent scientific research has investigated the effect of seismic testing on penguins to be potentially significant. Effects on birds are not considered under the Department of Conservation's Code of conduct for minimising acoustic disturbance to marine mammals for seismic survey operations, which only investigates effects to marine mammals. Council officers have explored and discussed with submitters, during the pre-hearing process, a consented (controlled activity) pathway for seismic testing to ensure that there is a process to gather

information and consider any effects on biodiversity values, including those on the little blue penguin, prior to the activity commencing. Strong and widespread support has been indicated for this change although some submitters argued for further restrictions. After hearing submissions, the Hearing Panel recommends making seismic testing in the CMA a controlled activity, subject to standards, terms and conditions.

- **Rules for structure maintenance, alteration and extensions:** General feedback from some submitters on the maintenance, alteration and extension rules in the Proposed Coastal Plan was that the framework was complicated and, in some instances/scenarios, submitters were not sure which rule might apply to specific activities with the potential for more than one rule to apply to a single activity. Submitters were also concerned about the relevant definitions of these activities. After hearing submissions, the Hearing Panel recommends amendments to reframe the structure maintenance / alteration / extension rules.
- **New rules for sampling and monitoring:** Amendments to Rule 52 [Collection of benthic grab samples] (permitted) and inclusion of two additional rules, 52A and 52B (controlled and discretionary) to provide for disturbances arising from the collection of scientific samples and/or arising from monitoring activities.
- **Revised noise provisions for temporary military training activities:** Amendments to Section 8.6.3 (c) [Noise limits] to better reflect requirements set by the New Zealand Defence Force for temporary military training activities throughout the country.
- **Amendments to on-line maps (and associated schedules)** to better identify 'high natural character areas' and areas of 'significant indigenous biodiversity'.

32. Of note, numerous other minor or inconsequential changes to the Proposed Plan have also been recommended by the Hearing Panel in response to submissions to improve certainty or clarity in relation to policy intent and/or to improve the readability of Plan provisions). In granting relief to some submitters other consequential changes were often necessary in other parts of the Plan.
33. Full copies of the written statements and evidence tabled at the Hearing Panel are in Appendix I of the Hearing Panel Report. It is recommended that the Hearing Panel's report (attached), including the findings and recommendations, be adopted by the Council.

Section 32AA Evaluation Report

34. Also attached to this item for Member's consideration is a Section 32AA Evaluation Report that addresses those key changes that have occurred through the submission and hearing processes that were not considered by the Council under the initial Section 32 evaluation
35. Pursuant to section 32AA of the RMA, an evaluation report *Section 32AA Evaluation Report Proposed Coastal Plan for Taranaki* (Section 32AA Evaluation Report) has been prepared.
36. Section 32(1) to (5A) of the RMA sets out the requirements for preparing and publishing evaluation reports for proposed regional plans and reads as follows:

- (1) *An evaluation report required under this Act must –*
 - (a) *examine the extent to which the objectives of the proposal being evaluated are the most appropriate way to achieve the purpose of this Act; and*
 - (b) *examine whether the provisions in the proposal are the most appropriate way to achieve the objectives by –*
 - (i) *identifying other reasonably practicable options for achieving the objectives; and*
 - (ii) *assessing the efficiency and effectiveness of the provisions in achieving the objectives; and*
 - (iii) *summarising the reasons for deciding on the provisions; and*
 - (c) *contain a level of detail that corresponds to the scale and significance of the environmental, economic, social, and cultural effects that are anticipated from the implementation of the proposal.*
 - (2) *An assessment under subsection (1)(b)(ii) must –*
 - (a) *identify and assess the benefits and costs of the environmental, economic, social, and cultural effects that are anticipated from the implementation of the provisions, including the opportunities for –*
 - (i) *economic growth that are anticipated to be provided or reduced; and*
 - (ii) *employment that are anticipated to be provided or reduced; and*
 - (b) *if practicable, quantify the benefits and costs referred to in paragraph (a); and*
 - (c) *assess the risk of acting or not acting if there is uncertain or insufficient information about the subject matter of the provisions.*
 - (3) *If the proposal (an amending proposal) will amend a standard, statement, regulation, plan, or change that is already proposed or that already exists (an existing proposal), the examination under subsection (1)(b) must relate to –*
 - (a) *the provisions and objectives of the amending proposal; and*
 - (b) *the objectives of the existing proposal to the extent that those objectives –*
 - (i) *are relevant to the objectives of the amending proposal; and*
 - (ii) *would remain if the amending proposal were to take effect.*
 - (4) *If the proposal will impose a greater prohibition or restriction on an activity to which a national environmental standard applies than the existing prohibitions or restrictions in that standard, the evaluation report must examine whether the prohibition or restriction is justified in the circumstances of each region or district in which the prohibition or restriction would have effect.*
 - (5) *If the proposal is a proposed policy statement, plan, or change prepared in accordance with any of the processes provided for in Schedule 1, the evaluation report must –*
 - (a) *summarise all advice concerning the proposal received from iwi authorities under the relevant provisions of Schedule 1; and*
 - (b) *summarise the response to the advice, including any provisions of the proposal that are intended to give effect to the advice.*
 - (5A) *The person who must have particular regard to the evaluation report must make the report available for public inspection –*
 - (a) *as soon as practicable after the proposal is made (in the case of a standard or regulation);*
or
 - (b) *at the same time as the proposal is notified.*
37. The Section 32 Evaluation Report gives effect to the aforementioned requirements. The report evaluates the appropriateness of each objective in the Proposed Plan to achieve the purpose of the RMA and confirms that the proposed objectives are the most appropriate way to achieve the purpose of the RMA. The report also confirms that the Proposed Plan policies and rules are the most appropriate way to achieve the objectives and that the anticipated benefits of the proposal outweigh the costs. The impacts of the Plan on economic growth are, in the main, considered to be limited and,

in some cases, beneficial. By its very nature, the Plan does impose regulatory constraints on use and development activities in the CMA. However, in all cases, these constraints are considered justifiable and appropriate having regard to environmental, social and cultural benefits anticipated.

Next steps

38. Following consideration of the Section 32AA Evaluation and the Hearing Panel's report, staff will prepare the formal Council decisions document and a further amended version of the Proposed Coastal Plan for consideration and adoption by the full Council at their meeting on 24 September 2019.
39. The formal decision document will incorporate in full the recommendations of the Hearing Panel (subject to any changes recommended by this Committee) and be presented to the full Council for its consideration.
40. If the Council adopts the decisions, the decisions document will be made available to all submitters. Submitters will then have 30 working days from service of the Council's decisions, to appeal to the Environment Court against the Council's decisions. Given the agreements reached during the pre-hearing and hearing processes, it is hoped that there will be no appeals against the Council's decisions. Any appeals could delay the Proposed Coastal Plan becoming operative by some months until a formal hearing before the Environment Court is completed.
41. Also of note the Coastal Plan mapping portal, showing the online maps and scheduled information, will be amended to reflect Council decisions.

Decision-making considerations

42. Part 6 (Planning, decision-making, and accountability) of the *Local Government Act 2002* has been considered and documented in the preparation of this agenda item. The recommendations made in this item comply with the decision-making obligations of the Act.

Financial considerations—LTP/Annual Plan

43. This memorandum and the associated recommendations are consistent with the Council's adopted Long-Term Plan and estimates. Any financial information included in this memorandum has been prepared in accordance with generally accepted accounting practice.

Policy considerations

44. This memorandum and the associated recommendations are consistent with the policy documents and positions adopted by this Council under various legislative frameworks including, but not restricted to, the *Local Government Act 2002*, the *Resource Management Act 1991*, the *Local Government Official Information and Meetings Act 1987*, and the *Biosecurity Act 1993*.

Iwi considerations

45. This memorandum and the associated recommendations are consistent with the

Council's policy for the development of Māori capacity to contribute to decision-making processes (schedule 10 of the *Local Government Act 2002*) as outlined in the adopted long-term plan and/or annual plan. Similarly, iwi involvement in adopted work programmes has been recognised in the preparation of this memorandum.

Legal considerations

46. This memorandum and the associated recommendations comply with the appropriate statutory requirements imposed upon the Council.

Proposed Coastal Plan for Taranaki

Hearing Panel's report on submissions

Hearing panel report on Decisions Requested Proposed Coastal Plan for Taranaki

3 September 2019

Document number: 2275386

IN THE MATTER of the Resource Management Act 1991

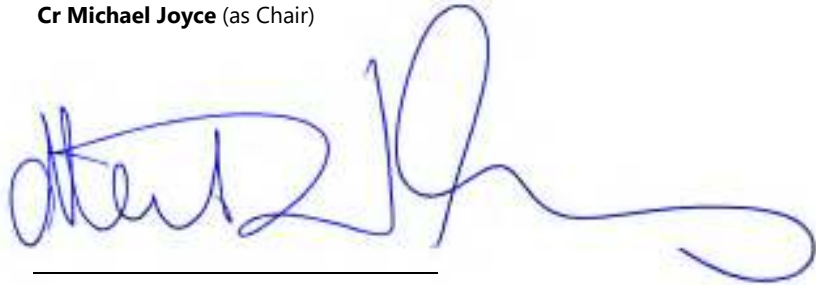

AND

IN THE MATTER of the hearing of submissions on the *Proposed Coastal Plan for Taranaki*

The Hearing Panel is grateful for all the requests and suggestions by submitters and their witnesses that have assisted the Hearing Panel in its deliberations and in reaching the recommendations to the Council contained in this report. Having considered all the submissions, Panel members have made our deliberations and therefore recommend the amendments to the *Proposed Coastal Plan for Taranaki* contained in this report.

Cr Michael Joyce (as Chair)

1 Introduction

This section introduces the Hearing Panel's report on the Proposed Coastal Plan for Taranaki.

1.1 Purpose

The purpose of this document is to present a report from the Hearing Panel to the Taranaki Regional Council (the Council) that summarises the decisions sought in submissions on the *Proposed Coastal Plan for Taranaki* and to make recommendations on those submissions.

Note, the recommendations presented in this report are recommendations by the hearing panel and have not yet been formally considered by the Council.

1.2 Scope and background

The *Proposed Coastal Plan for Taranaki* was publicly notified for submissions on 24 February 2018, with submissions closing on 27 April 2018.

Public notice calling for further submissions supporting or opposing the initial submissions was made on 21 July 2018 and closed on 4 August 2018. Further submissions may only be made in support of or opposition to the submissions already made. A further submission cannot extend the scope of the original submission and can only seek allowance or disallowance (in whole or in part) of the original submission.

Sixty-one initial submissions were received with 25 further submissions also received.

In October 2018, an officers report with preliminary recommendations in response to submissions (and a revised track change version of the Proposed Plan) was released and made available to all submitters for their consideration. Subsequently, the Council extended an offer to submitters to ascertain their interest in meeting with officers to discuss their issues and officers' preliminary response as part of a pre-hearing engagement process. Council officers met with 28 submitters to discuss changes recommended to the Proposed Plan. These meetings allowed submitters to further

clarify their concerns, discuss proposed relief and explore any alternative relief options, where appropriate. The opportunity to reconsider officers' preliminary recommendations in light of this engagement was useful and resulted in a number of changes in officer recommendations that have been incorporated into a Section 42A report. A hearing has subsequently been held and this report prepared to incorporate the recommendations of the hearing panel to Council.

Section 1 of this report introduces the report, which has been prepared by the Council to inform the review of the Coastal Plan in accordance with Clause 7 of the First Schedule of the *Resource Management Act 1991* (the RMA).

Section 2 of this report provides an index of initial and further submitters.

Section 3 of this report summarises how the Proposed Plan was developed and the Plan review process to date.

Section 4 of this report summarises decisions sought by initial submitters and Hearing Panel' recommendations.

As far as practicable, decisions sought by various submitters have been grouped by specific sections of the Proposed Plan. Some submitters have not clearly stated the decision they wish the Council to make or the reason behind the submission. In such cases the intent of the submission has been considered or inferred from the submission and a response accordingly made.

For each decision sought by initial submitters, this document sets out:

- the decision(s) requested by submitters;
- support or opposition from further submitters to the decision requested by the initial submitter; and
- the Hearing Panel's recommendation in response to the decision requested, including reasons.

Where a recommendation involves changing the Proposed Plan the changes, as read, have been included. Deletions have not been identified but can be found in the Track change version of the Proposed Coastal Plan.

1.3 How to read this document

Individual submission points are numbered for ease of reference as shown below. Any support or opposition from further submitters to the decision requested by the initial submitter is also identified.

Submitter	Submission point	Submitter's requests	Hearing Panel recommendation and response
Rule XYZ			
Submitter id (Each initial submitter has an identification number, e.g. 1 to 61)	Submission point – numbering for decisions sought in submissions	Support / Amend / Other	Accept / Accept in part / Grant in kind / Decline / No relief necessary
		Submitter's request.	Explanation of recommendation
Further submitter (if applicable)		Support / Opposition / Neutral - to the submission point	

Unless the context indicates otherwise, all references to Plan provisions relate to the version of the *Proposed Coastal Plan for Taranaki* publicly notified On 24 February 2018.

2 How the Plan was developed

This section outlines the Coastal Plan review process to date.

The Proposed Plan has been prepared as a result of a full review of the current Coastal Plan under Section 79 and Schedule 1 of the RMA, which has involved the following steps.

2.1 Early engagement

In accordance with Schedule 1 of the RMA, the Council has sought and considered comments from iwi authorities, the Department of Conservation, Heritage New Zealand, New Plymouth District Council, South Taranaki District Council, and other stakeholders in preparing to formally review the Proposed Coastal Plan.

This engagement has involved a combination of information provision, two-way consultation, and iwi and stakeholder exchanges that have assisted in the identification of key issues and community aspirations, plus the development of a draft Coastal Plan (refer Section 2.3 below) and a Proposed Coastal Plan (refer Section 2.5 below) and the refinement of Plan provisions.

2.2 Technical reports and research

The technical reports, working papers, research, policy development and public consultation that contributed to the development of the current Coastal Plan are still relevant. However, as part of this Plan review, a suite of additional discussion documents and technical papers were prepared or commissioned to further inform Council's policy position on future coastal management. They included:

- State of the environment monitoring reports (2003, 2009, 2015)
- *Efficiency and effectiveness of the Regional Coastal Plan for Taranaki* (2002, 2009)
- *Taranaki Region Coastal Plan Review – Archaeological Scoping Study* (December 2012)

- *Taranaki Regional Council – Offshore Seismic Data Acquisition Permitted Activity Review* (May 2015)
- *Taranaki Regional Council – Offshore Petroleum Drilling Review* (August 2015)
- *Petroleum Drilling Activities; Buffer Distances from Outstanding Areas and Substrate Types Requiring Protection* (October 2015)
- *Regional Landscape Study of the Taranaki Coastal Environment* (November 2015)
- *Taranaki Surf breaks of National Significance* (May 2016)
- *Sensitive Habitats and Threatened Species in the Taranaki Coastal Marine Area* (August 2016)
- *Regional Significance Criteria for the Assessment of Surf Breaks* (July 2017)
- *Online Wave Survey Data Analysis and Proposed Regionally Significant Surf Breaks* (October 2017).

2.3 Consultation on a draft Plan

On 2 September 2016, to facilitate comments on specific proposed changes to the current Coastal Plan, the Council released a draft Proposed Coastal Plan to iwi authorities, stakeholders and the wider public for their comment and input. This was an extra non statutory step to inform the development of Plan provisions. See <https://www.trc.govt.nz/council/plans-and-reports/strategy-policy-and-plans/regional-coastal-plan/coastal-plan-review/draft-coastal-plan/> for further details.

The draft Coastal Plan set out the findings and outcomes of the engagement and technical investigations undertaken at that time. It largely proposed continuing the existing regime set out in the current Plan subject to a number of important changes. The proposed changes sought to build on the success of the past and continue the decades-long process of incrementally and systematically improving on the maintenance and enhancement of coast values and uses while providing for appropriate use and development.

Other changes were also proposed to give effect to recent national directives such as the *New Zealand Coastal Policy Statement* or NZCPS, and take into account changing environmental practices and community aspirations, plus experiences and lessons learned from the implementation of the current Coastal Plan.

As part of this engagement, around 120 stakeholders consisting of iwi authorities, Department of Conservation, district councils, major consent holders, the oil and gas sector groups, government departments, Royal Forest and Bird, and other non-government organisations with an interest in coastal issues were invited to provide feedback on the draft Coastal Plan. The Council also made the draft Coastal Plan available on its website for any member of the public wishing to comment.

The deadline for feedback on the draft Coastal Plan was 26 November 2016. The Council received 101 responses on the draft Coastal Plan from interested parties and individuals.

In general, many respondents appreciated the opportunity for early input and requested continued involvement throughout the planning process. There was considerable support for the draft Coastal Plan in terms of its content and draft provisions with many requesting that certain provisions be retained. However, there were also requests for changes.

Key themes to emerge from feedback seeking change or further work were as follows:

- minor amendments to Plan provisions sought to improve their readability and/or other changes for the purposes of certainty and clarity
- more substantive changes to Plan provisions to support or restrict use and development in the coastal marine area (CMA)
- Ngati Ruanui, Ngāruahine, and Ngāa Rauru highlighted issues and/or suggested changes to Plan provisions to improve the integration of cultural values and principles and to identify sites of high cultural significance in the coastal marine area
- opposition to a proposed rule for the temporary occupation of the common marine and coastal area for community, recreational or sporting activity as a permitted activity.

Other comments submitted related to minor changes or correcting drafting errors or sought further clarification on issues of interest.

Council officers conducted workshops and held additional meetings and hui with respondents during and following that process to clarify and discuss issues and options.

This included meeting with iwi authorities, interested hapū, New Plymouth District Council, industry, and sector groups. A revised draft Coastal Plan showing Council responses to feedback was circulated to respondents in August 2017 with further opportunity for input.

2.4 Engagement with iwi authorities

As outlined in sections 2.1 to 2.3 above, the Council has sought to engage with iwi authorities throughout the Plan review process. Consultation and collaborative effort with Iwi o Taranaki has greatly informed the Plan review process, including changes to the current Plan.

Appendix II of the Section 32 evaluation report set out a summary of the advice received from iwi authorities, including the Council's response to date.

2.5 Proposed Plan, submissions and pre-hearing process

In conjunction with the preparation of its section 32 evaluation report, the Council publicly notified the Proposed Plan on 24 February 2018 in accordance with Schedule 1 of the RMA. This commenced the formal public consultation on the Coastal Plan review and has so far involved the public notification of a Proposal, and the receipt and consideration of public submissions. The deadline for submissions was 27 April 2018.

Assessment of those submissions was undertaken immediately. A summary of submissions will be notified and any cross-submissions (or 'further' submissions) called for on 21 July 2018. The deadline for further submissions was 4 August 2018.

The Council provided an opportunity for every person who makes a submission and who requests to present their views in person to a Hearings Committee, to be so heard.

In October 2018, an officers' report with preliminary recommendations in response to submissions (and a revised track change version of the Proposed Plan) was released and made available to all submitters for their consideration. Subsequently, the Council extended an offer to submitters to ascertain their interest in meeting with officers to

discuss their issues and officers' preliminary response as part of a pre-hearing engagement process. Council officers met with 28 submitters and or their representatives to discuss their submissions and any changes recommended to the Proposed Plan. These meetings allowed submitters to further clarify their concerns, discuss proposed relief and explore any alternative relief options where appropriate. The opportunity to reconsider officers' preliminary recommendations in light of this engagement was useful and resulted in a number of changes in officer recommendations that were incorporated into a Section 42A report.

2.6 Hearing of submissions

The Council, acting under section 34A of the RMA, appointed the authors of this report, as hearing commissioners to hear, consider and make recommendations to it on the submissions on the Proposed Plan. The Council delegated to the Hearing Panel all its functions, powers and duties to hear and consider submissions on the Proposed Plan, including requiring and receiving reports under section 42A and exercising powers conferred by sections 41B and 41C of the RMA.

Three accredited hearing commissioners were appointed to the Hearing Panel. They were **Cr Michael Joyce** (as Chair), **Cr Neil Walker**, and **Rawiri Faulkner** (the latter being appointed as an independent hearing commissioner with tikanga Maori expertise).

For the avoidance of doubt, the Hearing Panel affirm that, throughout the performance of its duties, hearing commissioners have been entirely independent and objective in considering and making recommendations on the submissions.

As previously noted, the Hearing Panel required and received reports under section 42A of the RMA on the Proposed Plan and the submissions on it. The Hearing Panel conducted public hearings on the reports and evidence and submissions of the submitters who wished to be heard. Those hearings were conducted at the Taranaki Regional Council premises in Stratford on 24 July and 1 August 2019.

Fifteen submitters¹ presented and were heard in support of their submissions at the hearing (refer Table 3, Section 3 of this Plan). Key themes and discussion points raised by the submitters that presented to the hearing are summarised as follows:

- Taranaki Energy Watch: Highlighted concerns regarding the impacts of oil and gas activities in the coastal environment and seeking the bundling of rules relating to oil and gas exploration and production activities and for the activities to be discretionary or non complying.
- Ms Pratt: Support for the Project Reef being identified as an Outstanding Value coastal management area.
- Department of Conservation: Sought amendments to include criterion policies identifying high natural character, minor changes to rules addressing biofouling, and new methods addressing advocacy to district councils regarding dog control and Council investigating whether or not it will have occupational coastal charges.
- Oil Companies and Powerco (joint evidence): Highlighted the importance of the oil and gas and electricity transmission industries to the region. Broadly supportive of the Plan but sought additional amendments to ensure their activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions.
- Fonterra: Generally supportive of the Plan but sought additional amendments to ensure Fonterra activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions.
- Te Korowai o Ngaruahine: Generally supportive of the Plan noting it is broadly "in a good place" but sought additional amendments to highlight Council commitment to protecting and monitoring tangata whenua values, and concerns relating to subjective terms adopted in rule standards, terms and conditions.
- Ngati Rahiri hapū: Strongly opposed to permitted activity rules that are on or above reefs in their rohe. Sought that permitted activity rules be changed to a discretionary activity unless it is for customary uses, to give effect to Treaty of Waitangi, need their activities to be discretionary. Submitter noted that the issue is more about being part of the decision making and notification process.

¹ Seventee submissions were heard, noting that the Oil Companies and Powerco jointly submitted on their submissions

- Te Kotahitanga o te Atiawa: Noted Plan scope largely reflects most tangata whenua values but sought further amendments to underpin the protection of tangata whenua values.
- Te Kaahui o Rauru: Acknowledged reliefs agreed to in the Section 42A Report, including the addition of guiding tangata whenua principles, but sought additional amendments to the Plan such as amendments to Policy 8 [Areas of Outstanding Value], and Policy 13 [Relationship with tangata whenua], Rules 22, 26, 54 and 85, plus reparation mechanisms in Section 9 [Financial contributions] to protect, maintain or restore cultural and historic sites of significance to Maori.
- Fay Mulligan and Monique Takarangi: Concerned that mapped Significant Surf break Area includes Maori Reservation land and highlighted some surf break names as culturally offensive. Also highlighted problems related to freedom camping and public access and the risks to their land and sites of significance.
- Royal Forest and Bird Society: Sought additional amendments to grant reliefs sought in their original submission to ensure the Plan gives effect to the NZCPS (e.g. identification of areas of high natural character and significant indigenous biodiversity) and other changes to Plan provisions to improve the certainty and clarity of the provisions protecting indigenous biodiversity values.
- Port Taranaki: Sought additional amendments to ensure Port Taranaki activities are appropriately recognised and provided for in the Plan and to improve the certainty and clarity of Plan provisions. The submitter further sought that the Breakwater surf break be deleted from the Plan.
- New Zealand Defence Force (NZDF): Opposed the biofouling rules being applied only to the Port Taranaki coastal management area and sought amendments to the general standards for noise relating to temporary military training activities to align with relief sought by NZDF in other plans around the country.
- Petroleum Exploration and Production Association of NZ: Suggest oil and gas activities are appropriately recognised and provided for in the Plan but sought additional amendments to improve the certainty and clarity of Plan provisions, particularly in relation to policies addressing oil and gas activities [Policy 29] and the removal of coastal structures [Policy 38] and other relevant Rules 26 and 27.

Six submitters did not appear (Federated Farmers, First Gas, Meridian Energy, Heritage New Zealand, Transpower and Trans Tasman Resources) but presented written briefs of evidence in support of their submissions.

Copies of the written briefs or evidence presented or tabled at the hearing are included in Appendix I of this report.

During the hearings, the Hearing Panel asked questions of submitters to enhance their understanding of submitter requests, the grounds for them, and advice given in the section 42A reports. The Hearing Panel endeavoured to conduct the hearings with a minimum of formality to an extent that allowed for good communication and fairness to all submitters. A number of submitters raised matters not covered in their original or further submission. As far as practicable the Hearing Panel has endeavoured to address all matters raised in this report, however, some matters were determined to be out of scope and have not been covered in this report.

Most of the submissions on the Proposed Plan requested amendments to it, and gave reasons for requesting those amendments. Many also constructively proposed specific improvements to the Proposed Plan developed by themselves or their advisers.

On 1 August 2019, following the completion of the public hearings, Hearing Panel members deliberated on the matters raised in the submissions heard, all written submissions on the Proposed Plan, the outcome of any pre-hearing consultation with submitters, the officers' recommendations on submissions, and the further evidence and submissions tabled at the hearing. The Hearing Panel members further met on the 12 August to complete their deliberations and instructed reporting officers, on their behalf, to formulate their recommendations to Council on the decisions requested.

Hearing Panel members are grateful for all the requests and suggestions by submitters and their witnesses; and by the section 42A report authors. Members acknowledge that the requested and suggested amendments, including those not recommended, and the evidence relating to them, have substantially assisted the Panel in its deliberations and in reaching the recommendations to the Council made in this report. The submissions and reports have all contributed to an effective and fair process for which Part 1 of schedule 1 of the RMA provides.

2.7 Remainder of the Schedule 1 review process

Recommendations presented in this report by the Hearing Panel, will be formally considered by Council.

The Council's decisions on the matters raised (in the submissions) will be publicly notified. If any person who made a submission on the Proposed Plan is dissatisfied with the subsequent decision of the Council, he or she may refer the decision to the Environment Court, which in turn would hold a formal public hearing into the matter. The Environment Court may direct the Council to make amendments to the Proposed Plan.

Once finally approved by the Council (taking into account any directives from the Environment Court), the Proposed Plan becomes operative on a date that is publicly notified.

Figure 1 below provides an overview of the Coastal Plan review process, including where "we are at" in terms of the process.

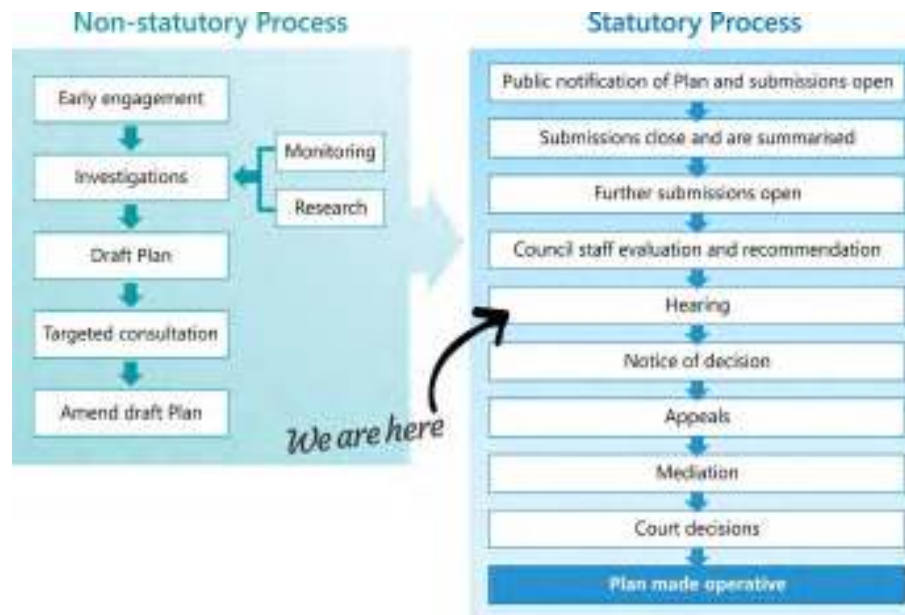

Figure 1: Coastal plan review process

4 Summary of decisions sought and Hearing Panel recommendations

This section sets out the summary of decisions sought by submitters for the Plan and the Hearing Panel's recommendation in response to the decision sought.

As far as practicable, decisions sought by various submitters have been grouped according to common themes (where they relate to changes to Plan provisions or process generally) or to specific sections of the Proposed Plan (where they have been referenced or inferred). Where specific wording changes to Plan provisions are requested by submitters or proposed by the Hearing Panel, recommended insertions are marked in red and underlined, while recommended deletions are shown as ~~struck-out~~ text. Hearing Panel recommendations generally only show the recommended wording as read and struck out material has not been included. The full amendments, including any deleted/struck out text can be found in the associated track changed version of the Plan.

4.1 Whole Plan – General comments

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
General – Plan			
2 – Federated Farmers	1	Amend	No relief necessary
		Submitter is broadly supportive of the planning approach taken but seeks that normal farming activities that occur in the coastal marine area (adjacent to farms or where the farm boundary extends to the coastal marine area) that these farming activities are permitted.	Note rules relating to use and development activities do not apply to activities landward of the coastal marine area line.
4 – Allen Pidwell	2	Support	Accept
		Submitter supports the Proposed Plan.	Support noted.
26 – Transpower NZ Ltd	3	Amend	Accept
		Submitter is broadly supportive of the Proposed Plan subject to specific amendments to give full effect to the <i>National Policy Statement for Electricity Transmission 2008</i> .	Support is noted. The Hearing Panel notes that the submitter has requested specific amendments throughout the Plan, to bring the Plan more in line with provisions within the <i>National Policy Statement for Electrical Transmission</i> . The Hearing Panel agrees that the <i>National Policy Statement for Electrical Transmission</i> is required to be given effect to within the Plan and recommend consequential amendments to the Plan in response to some of the specific reliefs sought by the submitter.
29 – Department of Conservation	4	Support	No relief necessary
		Submitter notes the Proposed Plan is well structured and easy to use.	Comments noted.
	5	Amend	Accept

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
33 – New Zealand Defence Force		Submitter seeks amendment to the Plan to consistently refer to “ <i>temporary military training activities</i> ” and omit the use of “ <i>military training activities</i> ”.	<p>The Hearing Panel agrees with the relief sought by the submitter.</p> <p>The Hearing Panel has further reviewed the Plan to consistently refer to “<i>temporary military training activities</i>” and omit the use of “<i>military training activities</i>” or other variant where “<i>temporary military training activities</i>” would suffice. The Hearing Panel recommends consequential amendments to the definition section of the Plan to delete the term “<i>Military training</i>” and include a new definition for “<i>temporary military training activity</i>”. This is consistent with definition provided in the <i>National Planning Standards</i>, which came into force on 3 May 2019.</p> <p>The amended definition reads as follows:</p> <p><u>Temporary military training activity means a temporary activity undertaken for the training of any component of the New Zealand Defence Force (including with allied forces) for any defence purpose. Defence purposes are those purposes for which a defence force may be raised and maintained under section 5 of the Defence Act 1990 which are:</u></p> <p><u>(a) the defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;</u></p> <p><u>(b) the protection of the interests of New Zealand, whether in New Zealand or elsewhere;</u></p> <p><u>(c) the contribution of forces under collective security threats, agreements, or arrangements;</u></p> <p><u>(d) the contribution of forces to, or for any of the purpose of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;</u></p> <p><u>(e) the provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency;</u></p> <p><u>(f) the provision of any public service.</u></p>
34 – Fay Mulligan and Carol Koha	6	<p>Other</p> <p>Note submitters wish to speak in reference to protections of cultural values/activities and Māori involvement and protection of tikanga.</p>	<p>No relief necessary</p> <p>No precise details of amendments sought to the Plan have been provided. However, the submitters' wish to be heard relating to Māori involvement and protection of tikanga was given effect to when the submitters presented to the hearing on 24 July.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
36 – Todd Energy	7	Support	Accept
		Submitter supports the Proposed Plan as currently drafted.	Support noted.
41 – Te Korowai o Ngāruahine Trust	8	Support	No relief necessary
		Submitter broadly supports the overall direction of the Plan but highlights the benefits of marine spatial planning and seeks the adoption and application of an ecosystems based approach to prevent further degradation of the biodiversity and character of the coastal environment.	<p>The Hearing Panel notes submitter's support for the Plan direction.</p> <p>In relation to marine spatial planning, the Hearing Panel notes that considerable work has been done to collate information on uses and values in the coastal marine area, including the marine environment, and as appropriate, relevant spatial information and overlays have been included in the planning maps. These planning maps are underpinned by GIS information, which, though sitting outside the Plan, may provide additional information that can also be used to inform consenting processes. Together there is considerable information that contributes to marine spatial planning that may be built on over time.</p> <p>At the hearing, the submitter questioned the subjectivity of some of the terms adopted in the Plan rules, e.g. "adverse", "reasonable", "significant" and "minor contaminant". The Hearing Panel notes that not all words in the Plan are defined and the interpretation of Plan provisions must sometimes necessarily rely on the common understanding of key terms and/or the reading context. For example, in relation to the term "adverse", the term is an RMA term and is defined by the Oxford dictionary as harmful. This would be consistent with most reader's understanding of the term. Rules 1A, 1, 15 and 35 refer to "reasonable mixing". While the current Freshwater Plan has provided a definition that refers to a "...zone seven times the width of the channel at the point of the discharge" this definition is not considered appropriate for the significantly different and complex natural and ecological processes that characterise the marine environment. In relation to the terms "significant", the <i>Regional Policy Statement for Taranaki</i> has defined these terms but again this something that would be difficult to have some quantitative measure for that could be applied in all circumstances, all the time. Finally, reference to "minor contaminant" only occurs in the gateway of Rule 1A and acknowledges that all water is likely to contain some natural or man-made 'contaminants'. It is appropriate therefore to refer to minor contaminants in the gateway for the purposes of certainty and clarity. However, the parameters or definition for what constitutes 'minor contaminants' can be determined by a wider reading of the rule and, in particular, the matters in the standards, terms and</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			conditions that need to be complied with. The Hearing Panel recommends no change to the Plan in this area.
55 – Kiwis Against Seabed Mining	9	Amend Submitter seeks amendments to the Plan to include marine spatial management and associated rules framework as an appropriate method to address fishing, oil and gas, and seabed mining.	Decline No precise details of amendments sought to the Plan have been provided. However, the Hearing Panel does not consider further amendments to the Plan are necessary.
Further submissions – Ministry for Primary Industries (16)		Oppose	The Hearing Panel notes that considerable work has been done to collate information on uses and values in the coastal marine area, including the marine environment, and as appropriate, relevant spatial information and overlays have been included in the planning maps. Furthermore, it is the Hearing Panel's view that oil and gas and seabed mining have been appropriately addressed in the rules framework of the Plan pursuant to the Council's RMA responsibilities. However, as a result of pre-hearing engagement further changes to the Plan are proposed that make seismic testing a consented activity (rather than a permitted activity). The Hearing Panel note that fishing activities are controlled by the Ministry for Primary Industries and Fisheries New Zealand through the <i>Fisheries Act 1996</i> and it is not necessary or appropriate to provide for fishing activities within the Plan.
56 – Greenpeace	10	Amend Submitter seeks amendments to the Plan to include marine spatial management and associated rules framework as an appropriate method to address fishing, oil and gas, and seabed mining.	Decline No precise details of amendments sought to the Plan have been provided. However, the Hearing Panel notes that considerable work has been done to collate information on uses and values in the coastal marine area, including the marine environment, and as appropriate, relevant spatial information and overlays have been included in the planning maps. Furthermore, it is the Hearing Panel's view that oil and gas and seabed mining have been appropriately addressed in the rules framework of the Plan pursuant to the Council's RMA responsibilities. However, as a result of pre-hearing engagement, further changes to the Plan were proposed that make seismic testing a consented activity (rather than a permitted activity). The Hearing Panel notes that fishing activities are controlled by the Ministry for Primary Industries and Fisheries New Zealand through the <i>Fisheries Act 1996</i> and it is not necessary or appropriate to manage fishing activities within the Plan.
Further submissions – Trans-Tasman Resources Ltd (6), Ministry for Primary Industries (16)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Indigenous biodiversity provisions			
3 – Roger Maxwell	11	Other	No relief necessary
		Submitter questions what action, if any, is proposed to manage/control the expansion of mangroves in the estuarine areas of the Taranaki coastal area?	The Hearing Panel notes that the Council has no immediate plans to control mangroves in the Taranaki region. Mangroves are known to be present at Urenui estuary. These were planted about 40 years ago to prevent coastal erosion (they were also planted in other estuaries but did not establish). At present the spread appears to be very slow and is not of concern at the moment. However, should monitoring indicate mangroves are becoming invasive to the detriment of local coastal values the Council would consider a site-led response that involves working with the local community to manage the problem.
39 – Maniapoto Māori Trust Board	12	Other	No relief necessary
		Submitter seeks that the Taranaki Regional Council ensure that indigenous biodiversity in the coastal environment is maintained and enhanced and that it is protected.	The Hearing Panel notes that the Council is committed to the maintenance and enhancement of indigenous biodiversity in not just the coastal environment but across the region. This commitment is demonstrated across a variety of Council policy documents and its resourcing for programmes and activities that implement those policies. In addition to its regulatory responsibilities under the RMA to maintain indigenous biodiversity in the coastal marine area and fresh water, the Council has adopted the <i>Pest Management Plan for Taranaki</i> (2018), the <i>Taranaki Regional Council Biosecurity Strategy</i> (2018), and the <i>Biodiversity Strategy for the Taranaki Regional Council</i> (2017) that include a suite of regulatory and non-regulatory programmes for promoting biodiversity outcomes across the Taranaki region.
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	Notwithstanding the above, as a result of pre-hearing engagement, further changes to the Plan were proposed to include an additional policy (Policy 14A) that seeks to maintain and enhance indigenous biodiversity generally across the coastal environment. This is in addition to Policy 14 to protect 'significant indigenous biodiversity' in the coastal environment.
Life supporting capacity and mauri provisions			
39 – Maniapoto Māori Trust Board	13	Support	Accept
		Submitter supports recognition by Taranaki Regional Council of mauri and adverse effects when there is development of the coastal environment.	Support noted.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Petroleum related Plan provisions			
37 – Petroleum Exploration and Production Association of NZ	14	Support	Accept in part Support noted. Petroleum related provisions have been retained. However, the Hearing Panel notes consequential amendments to some provisions in response to reliefs sought by other submitters, including recommendation to make seismic testing a consented activity (rather than a permitted activity).
		Submitter seeks all other petroleum-related Plan provisions not explicitly covered in their submission are retained.	
51 - Taranaki Energy Watch	15	Amend	No relief necessary The submitter is concerned that areas of the Plan relating to petroleum provisions do not reflect a precautionary approach, which, in their view, is required by the <i>New Zealand Coastal Policy Statement</i> . The Hearing Panel suggests that no relief is necessary given that a precautionary approach is already adequately provided for via Policy 3 [Precautionary approach] of the Plan. Policy 3 is a General Policy that applies to all activities, including oil and gas industries, within the coastal environment and regardless of which coastal management area the activity may fall within. The Hearing Panel further notes that the potential risks associated with oil and gas exploration and production activities are well understood. In the main, oil and gas exploration activities are a controlled activity while oil and gas production activities in the coastal marine area are a discretionary activity or a non-complying activity. Therefore, through the consenting process, Policy 3 [Precautionary approach] and other relevant policies will be considered and applied, as appropriate, on a case-by-case basis.
		Submitter seeks amendment to the Plan in relation to petroleum related provisions to reflect the precautionary approach (similar to that of Policy 3) such that objectives, policies and rules within the coastal marine area incorporate a precautionary regime for effects of activities that are uncertain, unknown or little understood.	
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	
51 - Taranaki Energy Watch	16	Amend	Accept in part The Hearing Panel notes that separation and buffer zones have been considered and applied where it is practicable to do so. The Hearing Panel does not consider it appropriate to include such detail in the Plan objectives. However, there are opportunities within the policy and rule framework to do so. An appropriate buffers to avoid, remedy or mitigate adverse effects associated with oil and gas activities (plus other activities) would depend upon the scale, type and location of the activity. Such matters would be considered through the consenting process. For example, Rule 26 includes buffer distances set out in the standards, terms and conditions.
		Submitter seeks amendment to the Plan in relation to petroleum related provisions to add objectives and policies to support the use of separation and buffer zones as appropriate planning tools/methods to manage oil and gas activities in the coastal marine area.	
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Notwithstanding this, the Hearing Panel recommends amending Policy 29 [Impacts from offshore drilling and production] to refer to the use of separation distances. This will ensure that the application of separation distances (buffer) are fully considered through the consenting process.</p> <p>The revised Policy would read as follows:</p> <p><u>(aa) in relation to offshore production activities, adopting adequate separation distances to the extent necessary between the activity having regard to the values and sensitivity of the environment; [...]</u></p>
61 – Te Rūnanga o Ngāti Ruanui Trust	17	Amend Submitter seeks amendment to the Plan to reflect the Government's decision to cease offering new offshore oil and gas exploration permits and restricted permitting.	Decline No precise details of amendments sought to the Plan have been provided. The Hearing Panel acknowledges the current Government's decision to cease granting offshore oil and gas permits. However, the Hearing Panel notes that the licensing of oil and gas exploration permits is regulated under separate legislation by other authorities.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Royal Forest and Bird Protection Society (43), Te Atiawa (58)		Support	In terms of managing adverse environmental effects under the RMA, the Hearing Panel contends that it is not necessary to differentiate between new and existing hydrocarbon activities. In addition, the Hearing Panel notes that the Plan will be operative for a 10-year period and there is a risk that such an amendment could easily be made redundant should a new Government change its stance on oil and gas exploration permits.
Natural and historic heritage provisions			
39 – Maniapoto Māori Trust Board	18	Other Submitter support the importance of natural and historic heritage and would like to ensure that the Māori narrative is incorporated into the rich history of Taranaki.	No relief necessary Comments noted. No specific relief is requested, however, the Hearing Panel notes that a Māori narrative has been included where it is appropriate to do so and additional amendments to the Plan are also proposed to further support this.
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
28 – Grant Knuckey	19	Amend Submitter seeks amendments to the Plan (and other actions) to ensure it adequately provides for cultural well-being, relationship of with ancestral and contemporary lands, waters, taonga and rohe, and to actively protect taonga and	Accept in part No precise details of amendments sought to the Plan have been provided. However, the Hearing Panel suggests that the Plan in conjunction with recommended changes, amongst other things, will (as far as it is able) provide for

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		tapu spaces within the coastal environment or provide for management of the rohe in partnership with mana whenua (co-governance/management provisions).	the cultural well-being, relationship of Māori with ancestral and contemporary lands, waters, taonga and rohe, and will contribute to the protection of taonga and tapu spaces within the coastal environment.
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	Of note, all the Plan objectives, policies and rules address effects of interest to iwi o Taranaki. However, specific objectives, policies, methods, standards, terms and conditions and schedules also apply to ensure coastal use and development appropriately recognise and provide for the management of adverse effects on tangata whenua values. The identification of sites of significance to Māori in Schedule 5B of the Plan and associated planning maps (and proposed changes to include and schedule taonga species) should further assist Council in ensuring use and development in the coastal marine area avoid, remedy or mitigate adverse effects on Māori cultural and historic heritage values.
28 – Grant Knuckey	20	Amend Submitter seeks amendment to the Plan to ensure it applies Māori attributes of mana, mauri, tapu, taonga to assessment of natural character, particularly in relation to reefs and coastal waters of Taranaki rohe moana and whenua.	No relief necessary The Hearing Panel considers that this is already provided for whereby assessments of natural features and landscapes include consideration of cultural, spiritual, historic and heritage associations, which in turn are underpinned by Plan objectives, policies and rules to protect such values.
39 – Maniapoto Māori Trust Board	21	Support Submitter notes that tangata whenua values and relationships are key priorities to the submitter and desires the Council to work closely with Mokau ki Runga RMC around matters of social, cultural and economic wellbeing.	No relief necessary Comments noted.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	22	Other	No relief necessary
		Taking into account the outcomes of previous engagement, submitter questions what criteria Council planners will use to identify affected parties for the rules outlined in the Plan.	<p>The submitter is not seeking amendment to the Plan but has raised a question with respect to its implementation.</p> <p>The Hearing Panel notes the Council's consenting procedures are set out in its standard operating procedures entitled <i>Resource Consents Procedure Document</i>. This document sets out guidance and direction for Council staff on a broad range of consenting matters, including those relating to notification and determining affected party status.</p> <p>More specifically, in relation to sites of significance, the Council has worked closely with iwi authorities and, as part of the Plan review process, have provided written agreement that iwi will be notified of, as an affected party, any activities occurring within, adjacent to, or impacting directly on tangata whenua sites of significance identified in Schedule 5B in the coastal marine area.</p> <p>The 'trigger' for iwi involvement as an affected party is for any activities occurring within, adjacent to, or impacting directly on sites of significance in the coastal marine area. For such coastal permit applications the Council would advise the applicant that they would need affected party approval and suggest consultation be undertaken. If approval was not obtained from iwi the application would be notified.</p> <p>The Mana Whakahono a Rohe provisions of the RMA represents an opportunity to formalise this (and other) matters plus set out the operational details associated with planning and consenting processes including affected party definitions, appropriate consenting systems and processes, and applicant consultation requirements.</p>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
50 – Te Kāhui o Taranaki Trust	23	Other	No relief necessary
		Submitter questions the adequacy of Plan engagement and consultation.	<p>The submitter is not seeking amendment to the Plan but questions the adequacy of Plan engagement and consultation.</p> <p>Appendix II of the Section 32 Evaluation Report summarises Council's engagement and consultation with iwi authorities (and other tangata whenua) on the Proposed Plan, including Council's response to advice received from iwi.</p> <p>Iwi engagement and consultation commenced in late 2012 and has been ongoing to this point in time. In relation to the Taranaki Iwi, engagement included very early preliminary engagement through participation with an Iwi thinkers group, the</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			circulation and seeking of feedback on coastal archaeological report, seeking of feedback on a position paper on outstanding coastal areas, the circulation and seeking of feedback on draft Coastal Plan objectives and policies, consultation and seeking of feedback on a Draft Proposed Plan, the identification and mapping of sites and significance, and more recently the release of a Proposed Coastal Plan. It has also included, over that time, many hui and face-to-face meetings relating to not just the Coastal Plan but broader policy matters.
50 – Te Kāhui o Taranaki Trust	24	<p>Other</p> <p>Submitter seeks that all iwi (hapū, marae/pā) are notified as an affected party to any activities occurring within, adjacent to, or impacting directly on Statutory Acknowledgements and historic heritage sites and sites of significance to Māori within the coastal marine area.</p>	<p>Agree in part</p> <p>The submitter is not seeking amendment to the Plan but seeks that all iwi (hapū, marae/pā) be notified as an affected party to any activities occurring within, adjacent to, or impacting directly on statutory acknowledgement areas and historic heritage sites and sites of significance to Māori within the coastal marine area.</p> <p>The matters raised by the submitter have a wider application than just the Coastal Plan. Notwithstanding that, the Hearing Panel notes that Council has already given partial relief to this request.</p> <p>In relation to sites of significance, the Council has worked closely with iwi authorities and, as part of the Plan review process, have provided written agreement that iwi will be notified of, as an affected party, any activities occurring within, adjacent to, or impacting directly on tangata whenua sites of significance in the coastal marine area.</p> <p>The 'trigger' for iwi involvement as an affected party is for any activities occurring within, adjacent to, or impacting directly on sites of significance in the coastal marine area. For such coastal permit applications the Council would advise the applicant that they would need affected party approval and suggest consultation be undertaken. If approval was not obtained from iwi the application would be notified.</p> <p>In relation to extending consenting notification requirements to hapū and marae, Mana Whakahono a Rohe provisions of the RMA represents an opportunity to discuss and formalise such arrangements.</p>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	25	<p>Amend</p> <p>Submitter seeks amendment to the Plan by:</p> <ul style="list-style-type: none"> linking cultural areas of significance to both the past (historic) and present cultural areas and traditions 	<p>Accept in part</p> <p>No precise details of amendments sought to the Plan have been provided. However, the Hearing Panel suggests that the Plan, in conjunction with recommended changes, does link Plan provisions with cultural areas of</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> integrating objectives and policies with mana/tangata whenua with the rules section of the Plan. 	significance, and that Plan objectives and policies have been integrated with the rules section of the Plan.
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	<p>Together, all Plan objectives, policies and rules are part of a framework for addressing and managing adverse effects on tangata whenua values. However, specific objectives, policies, methods, standards, terms and conditions, and schedules also apply.</p> <p>The Hearing Panel notes that, in response to the submitter request (and that of others), a number of amendments have been made to specific Plan provisions, including amendments to Policy 15 [Historic heritage] and Policy 16 [Relationship of tangata whenua], other relevant policies, and the inclusion of a schedule of taonga species, to strengthen provisions protecting tangata whenua values in the coastal environment under the RMA.</p>
Scope of the Plan – ‘Coastal Marine Area’ and ‘Coastal Environment’			
26 – Transpower NZ Ltd	26	Other Confirmation is sought that the rules in the Plan only apply to the coastal marine area AND Submitter seeks clarification as to what Plan provisions apply to the coastal environment.	No relief necessary <p>The submitter is not seeking amendments to the Plan but seeks confirmation as to how the Plan provisions are applied.</p> <p>The Hearing Panel confirms that the rules only apply to the coastal marine area. However, as stated in sections 1.4.1, 4, 5.1 and 6 of the Plan, its objectives, general policies and methods (excluding rules) address the wider coastal environment for the purposes of effective integrated management.</p> <p>For the purposes of certainty and clarity, a minor amendment is proposed to Section 1.4 of the Plan to further highlight that the rules relate to the coastal marine area only. The amendment reads as follows:</p> <p><i>1.4 Application</i></p> <p><i>The provisions of the Plan have legal force under the RMA. Regional rules have the force and effect of a regulation under the RMA. <u>For the purposes of this Plan, the rules only apply to activities in the coastal marine area.</u></i></p>
Further submissions – Trans-Tasman Resources Ltd (6)		Support	
Coastal hazards			
39 – Maniapoto Māori Trust Board	27	Other Submitter seeks that Council ensure adequate resourcing to reduce vulnerability to property and people from coastal hazards.	No relief necessary <p>No precise details of amendments sought to the Plan have been provided. However, the Hearing Panel notes that Council routinely considers and consults on</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			the adequacy of resourcing and levels of services addressing natural hazard management as part of its annual planning and reporting under the <i>Local Government Act 2002</i> .
Surf breaks			
1 - Tom P Waite	28	Support Submitter supports the protection of surf breaks but submits that commercial development should not occur near river mouths or unique reef breaks.	No relief necessary Support noted. With regards to opposition to commercial development, the Hearing Panel notes that the purpose of the Plan is to assist Council in giving effect to Section 5 of the RMA, which means managing the use, development and protection of natural and physical resources irrespective as to whether that use and development is 'commercial' or not. Of note, threats to coastal values are not confined to commercial activities.
18 – Surfing Taranaki	29	Support Submitter supports the ongoing and further protection of Taranaki surf breaks.	No relief necessary Support noted.
50 – Te Kāhui o Taranaki Trust	30	Amend Submitter seeks amendment of the Plan by going through a proper process of consultation on the inclusion of nationally and regionally significant surf breaks noting that the names of many surf breaks are offensive and inappropriate.	Accept in part The Hearing Panel notes that through the Coastal Plan review there has already been considerable consultation and engagement on the issue of surf break protection. An initial list of regionally significant surf breaks was adopted in the current Regional Policy Statement, which was adopted in 2010. However, through the Coastal Plan review additional investigations and engagement occurred. This included the commissioning of reports on <i>Taranaki Surf breaks of National Significance</i> , and <i>Regional Significance criteria for the Assessment of Surf Breaks</i> , consultation and seeking of feedback on draft Plan policies, a draft Plan and, more recently, the Proposed Plan. As part of the review, an innovative 'wave survey' was also carried out that allowed the community to inform the Council which surf breaks have values and why. This information was used to determine the appropriate level of protection for each surf break. Naming conventions for surf breaks have been a result of the community engagement to date. However, the Hearing Panel agrees that the names of some surf breaks are culturally offensive and recommend alternative more appropriate names for surf breaks also be identified in Schedule 7 and associated planning maps where possible.

Coastal water quality provisions			
39 – Maniapoto Māori Trust Board	31	Other	No relief necessary
		Submitter supports measures to ensure development pressures do not deteriorate coastal water quality.	Support noted.
Section 32 Evaluation Report			
41 – Te Korowai o Ngāruahine Trust	32	Amend	No relief necessary
		Submitter is seeking amendments to the Section 32 Evaluation Report, where relevant, to further highlight or reference cultural heritage values, principles and associations.	<p>The submitter is not seeking amendment to the Plan but is seeking amendment to the accompanying Section 32 Evaluation Report to further highlight or reference cultural heritage values, principles and associations.</p> <p>In accordance with the RMA, a Section 32AA Evaluation Report needs to be prepared to reflect the current state of the Coastal Plan Review. Where applicable, this report will further highlight or reference key changes from the Proposed Plan relating to cultural heritage values, principles and associations.</p>
Planning maps			
42 – Ngati Rahiri Hapū	33	Amend	Accept
		Submitter seeks amendment to Plan maps (and associated GIS layers) to include and delineate offshore reefs based on information supplied by the submitter.	<p>Through the pre-hearing engagement process, Council officers have worked with the submitter to identify and map sites of significance to Ngati Rahiri Hapū.</p> <p>The coastal sites of significance data supplied by the submitter to the Council has been assessed in terms of the Section 6(e) of the RMA and site dimensions established. The Hearing Panel recommends that these sites can be identified in Schedule 5B of the Plan.</p>
43 – Royal Forest and Bird Protection Society	34	Amend	Accept
		<p>Submitter seeks amendments to Plan maps (and associated GIS layers) to identify the extent of the coastal environment</p> <p>OR</p> <p>Alternatively amend the maps to identify an indicative extent of the coastal environment.</p>	Council has worked closely with New Plymouth and South Taranaki district councils in identifying and mapping coastal areas of outstanding natural character and outstanding natural features and landscapes. Both district councils have commenced or about to commence their respective district plan reviews, which includes a coastal protection zone (or equivalent) that is indicative of where natural coastal processes or qualities are significant.
Further submissions – Fonterra (47)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			For the purposes of certainty and clarity for Plan readers, integrated management and to promote alignment between the respective regional and district plans, the Hearing Panel recommends that the Plan (and associated GIS layers and planning maps) be amended to include an indicative extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans. Other consequential changes are recommended to Policy 4 [Extent and characteristics of the coastal environment] to refer the reader to areas identified in a district plan or a proposed coastal plan as being the coastal environment.

4.2 Plan introduction or background

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Vision and/or Māori guiding principles			
40 – Te Rūnanga o Ngāti Mutunga	35	<p>Amend</p> <p>Submitter seeks amendment to the Plan to reinstate (from Draft Coastal Plan) Māori cultural values or guiding principles at the forefront of the Plan</p> <p>AND</p> <p>Seek to see these Māori cultural values or guiding principles are better reflected throughout the Plan and, in particular, the rules.</p>	<p>Accept</p> <p>Based upon earlier iwi feedback on the Draft Coastal Plan, Māori cultural values or guiding principles at the forefront of that Plan were removed. It was suggested that the review of the Regional Policy Statement (scheduled to occur in 2020) represented a better opportunity for iwi to consider and confirm the guiding principles.</p> <p>Notwithstanding the above, and given the support by other iwi agencies expressed in their submissions or further submissions, the Hearing Panel recommends that the Plan be amended to re-insert and incorporate those principles.</p> <p>In addition, through other proposed Plan amendments (signalled in this report) sought by the submitter and others relating to tangata whenua values, the Hearing Panel further recommends that the Council seek to ensure that these principles be incorporated into other relevant Plan provisions (and as identified in the track change version of the revised Proposed Plan).</p>
58 – Te Atiawa	36	<p>Amend</p> <p>Submitter seeks amendment to the Plan to reinstate (from Draft Coastal Plan) Māori guiding principles at the forefront of the Plan and seek to see them better reflected throughout the Plan and, in particular, the rules.</p>	<p>Accept</p> <p>Based upon earlier iwi feedback on the Draft Coastal Plan, Māori cultural values or guiding principles at the forefront of that Plan were removed. Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	37	Amend	Accept
		Submitter seeks amendment to the vision statement of the Plan to include the word “water” to adequately reflect Taranaki and the coverage of the Plan.	The Hearing Panel agrees and recommends amending last sentence of the vision statement to read:
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	<i>This vision recognises the roles and responsibilities shared by all people in Taranaki to ensure the sustainable and focused protection of air, land (soil), water and coastal environments for economic, social, cultural and recreational purposes.</i>
Section 1.2 – Purpose			
42 – Ngati Rahiri Hapū	38	Amend	Decline
		Submitter seeks amendment to the purpose statement of the Plan [Section 1.2] to state that the purpose of the Plan is to “direct” or “guide” the Taranaki Regional Council in coastal management under the RMA.	The Hearing Panel considers the purpose statement of the Plan to be consistent with the purpose statement for regional plans as set out in Section 63 of the RMA. Pursuant to Section 63 of the RMA, the purpose of regional plans is “... to assist a regional council to carry out its functions in order to achieve the purpose of the RMA.” The Hearing Panel does not recommend amending the purpose statement of the Plan as requested.
Section 1.4 – Plan application			
43 – Royal Forest and Bird Protection Society	39	Amend	Accept
		Submitter supports the scope of the Plan and Plan provisions for integrated management but seek that paragraph 2 of Section 1.4.2 be amended to clarify that the rules in this Plan apply to activities in the coastal marine area, including where those activities may have an adverse effect on outstanding values and significant indigenous biodiversity values outside of the coastal marine area.	The Hearing Panel recommends amendment to Section 1.4.1 to include a new sentence stating that while the rules in this Plan apply only to activities in the coastal marine area, nevertheless they include activities that can have an adverse effect on values and uses outside of the coastal marine area.
Further submissions – Transpower New Zealand Ltd (26)		Oppose in part	
45 – Powerco	40	Support	Accept
		Retain sections 1.4.1 and 1.4.2 of the Plan as notified.	Support noted subject to the minor amendment in response to Submitter (43) above.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	41	Support	Accept
		Retain sections 1.4.1 and 1.4.2 of the Plan as notified.	Support noted subject to the minor amendment in response to Submitter (43) above.
Section 1.6 – Mana whenua			
21 – Climate Justice Taranaki	42	Amend	Decline
		Submitter seeks amendment to Section 1.6 of the Plan to note Ngāti Maru are negotiating with the Crown regarding their Treaty of Waitangi settlement.	The Hearing Panel recommends declining the relief sought noting that this information is not relevant within the context of the Coastal Plan. Ngāti Maru Treaty of Waitangi settlement claims are unlikely to extend to the Taranaki coastal marine area. In the event, that this assumption is wrong, appropriate changes will be made to the Plan.
60 – Te Kaahui o Rauru	43	Amend	Accept
		Submitter seeks amendment to Section 1.6 of the Plan to read: <i>The resources of</i> Tangaroa <i>has have</i> provided [...]	The submitter prefers to refer to the Atua itself instead of using the anthropogenic term “resources”. The Hearing Panel recommends granting the relief sought.
60 – Te Kaahui o Rauru	44	Amend	Grant in kind
		Submitter seeks amendment to Section 1.6 of the Plan to replace the word “management” with “relationship” to describe interactions with the natural environment, on line 3 of paragraph 5.	The Hearing Panel recommends granting the relief in part by deleting reference to “sustainable coastal management” and instead making consequential changes to focus on the relationship of iwi o Taranaki with the coastal environment. The revised paragraph would read as follows: <i>Kaitiakitanga and tikanga, is at the heart of the relationship between the iwi o Taranaki and the coastal environment. This Plan has integrated the values of Taranaki iwi throughout Plan provisions.</i>
60 – Te Kaahui o Rauru	45	Amend	Accept
		Submitter seeks that the Plan communicate, with potential Plan users, the likelihood of the need for consultation with hapū when engaging with non-permitted activities. Submitter seeks amendment to Section 1.6 of the Plan to include the importance of hapū, alongside iwi, as tangata whenua.	The Hearing Panel recommends granting the relief sought by amending Section 1.6 to include hapū alongside iwi.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	46	Amend <p>The submitter expresses that tangaroa is still currently a source of rongoa and disagrees with the use of the word “was” as the word indicates past tense. The submitter further notes that tangaroa is a current source of mahinga kai.</p> <p>Submitter seeks amendment to first paragraph of Section 1.6 of the Plan to read:</p> <p><i>[...] These resources are were integral to the lives of the people who occupyied the settlements adjoining the coastline. Tangaroa provided for these people materially, actsed as a highway for travel, is was a source of <u>mahinga kai (food and resource)</u>, rongoa (medicine), aidsed their well-being and provided spiritual sustenance. [...]</i></p>	Accept <p>The Hearing Panel agrees that tangata whenua relationships with Tangaroa are current and ongoing as well as historic and recommend granting the relief sought.</p>
Further submissions – Te Atiawa (58)		Support	
Section 1.7 – Coastal management areas			
32 – Port Taranaki	47	Support <p>Retain Section 1.7.4 of the Plan as notified.</p>	Accept <p>Support noted. Section 1.7 is retained subject to minor amendments as requested by other submitters.</p>
43 – Royal Forest and Bird Protection Society	48	Amend <p>Submitter opposes the coastal management area approach adopted in the Plan as it is unclear as to how it applies to the wider coastal environment.</p>	Decline <p>The Hearing Panel recommends declining the relief sought.</p> <p>The coastal management areas approach is specific to the coastal marine area. It is based upon a similar regime that has been successfully applied through the current Coastal Plan and effectively is a zonal approach identifying five ‘coastal management areas’ based upon shared values, characteristics, vulnerabilities or sensitivities, and management needs. The ‘zones’ bundle compatible activities or effects of those activities together and restricts activities which are incompatible. Of note, management responses may vary within the coastal management area (and at a finer spatial scale) according to the particular sites and values triggered within a particular locality.</p>
Further submissions – Port Taranaki Ltd (32)		Oppose	
43 – Royal Forest and Bird Protection Society	49	Amend <p>If the coastal management area approach is to be retained, submitter seeks amendment to Section 1.7.1 of the Plan to:</p>	Accept in part <p>The Hearing Panel recommends granting in part to the relief sought by the submitter.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> clarify how the coastal environment landward of the coastal marine area is considered under this approach clarify how this relates with the <i>New Zealand Coastal Policy Statement</i> and relevant policies in the Plan amend reference from Schedule 1 to Schedule 2. 	The Hearing Panel recommends some amendments to further clarify how coastal management areas apply to the wider coastal environment. However, the Hearing Panel notes that the introductory sentence to Section 1.7 explicitly states that the five coastal management areas apply to the coastal marine area and that part of Policy 1 setting out the coastal management area framework is specific to the coastal marine area.
Further submissions – Department of Conservation (29)		Support	<p>In relation to further amendments sought by the submitter to Section 1.7.1 of the Plan, the Hearing Panel does not consider that it is necessary or appropriate for the Plan to detail how the coastal management approach applies to the <i>New Zealand Coastal Policy Statement</i> or policies in the Plan. Such matters are not compulsory content requirements of the RMA or the <i>National Planning Standards</i> and any explanation is more appropriately addressed in the Section 32 Evaluation Report.</p> <p>In relation to amending reference in the Section to refer to Schedule 2 instead of Schedule 1, the relief sought is declined. Schedule 1 is specific to the coastal management areas and is deliberately confined to the coastal marine area. Schedule 2 relates only to coastal areas of outstanding value and, because of the need to identify significant values across the broader landscape, necessarily includes areas landward of the coastal marine area.</p>
43 – Royal Forest and Bird Protection Society	50	<p>Amend</p> <p>Submitter seeks clarification as to whether coastal management areas – Estuaries Unmodified and Estuaries Modified are determined on the basis of values and characteristics under Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i>, or on the basis of modification. If the later, submitter seeks amendment to the Plan to explain that the Plan will protect values and characteristics of these estuaries as set out in Policies 8, 9 and 14 of the Plan.</p>	<p>No relief necessary</p> <p>Estuaries Unmodified and Estuaries Modified are based on estuaries identified in the current Coastal Plan and their differing management needs taking into account the presence or otherwise of settlements adjacent to the estuaries. Of note Taranaki has few major estuaries.</p> <p>The Hearing Panel does not consider that it necessary or appropriate to amend the Plan to explain that the Plan will protect values and characteristics of these estuaries as set out in Policies 8, 9 and 14 of the Plan. As explicitly stated in Section 5 of the Plan and in the policy references for rules, all General Policies need to be considered together. Together these policies will protect the values and characteristics of these estuaries as set out in Policies 8, 9 and 14.</p>
43 – Royal Forest and Bird Protection Society	51	<p>Amend</p> <p>Submitter seeks amendment to Section 1.7.5 of the Plan to clarify whether the Open Coast coastal management area refers to the remaining area of the coastal marine area or the wider coastal environment</p>	<p>No relief necessary</p> <p>No relief is considered necessary. The Hearing Panel notes that the first sentence of Section 1.7.5 already states that the Open Coast coastal management area is that area of the coastal marine area not covered by the other management areas.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		AND Clarify how the values and characteristics to be protected under Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> will be provided for in these areas.	In relation to the submitter seeking clarification on how values and characteristics of the Open Coast are to be protected in accordance with Policies 11 [Indigenous biodiversity], 13 [Preservation of natural character] and 15 [Natural features and landscapes] of the <i>New Zealand Coastal Policy Statement</i> , the submitter is referred to Policies 8, 9, 10, 11, 12, 13 and 14 of the Plan and the relevant rules. All General Policies in the Plan (plus relevant Activity-specific Policies) need to be considered together.
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support	
45 – Powerco	52	Amend Submitter supports Section 1.7 of the Plan and the inclusion of the five coastal management areas but seeks amendment to ensure that the presence of existing infrastructure in all of these areas is appropriately recognised by including the following sentence to paragraphs 1.7.1 to 1.7.3 as follows: <u><i>These areas may contain regionally important infrastructure.</i></u>	Grant in kind A number of submitters sought to have their uses, values or particular interests explicitly identified in the coastal management areas, despite such uses and values being common to most if not all coastal management areas. The Hearing Panel recommends minor and inconsequential changes to the first paragraph of Section 1.7 of the Plan to clarify that coastal management areas are areas or zones dividing the coastal marine area for management purposes and for which specific rules apply. This will avoid the need for unnecessary and potentially redundant commentary in the Plan that attempts to describe common attributes, characteristics and values that in all likelihood apply across all coastal management areas such as the presence of regionally important infrastructure (plus other uses and values). The proposed revised paragraph would read as follows: <i>The coastal marine area has been divided into five <u>coastal</u> management areas or zones. This division recognises that some areas have different management needs than other areas. These areas have been mapped in Schedule 1 <u>and specific rules apply</u> as follows: [...]</i>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	53	Amend Submitter supports Section 1.7 of the Plan and the inclusion of the five coastal management areas but seeks amendment to ensure that the presence of existing infrastructure in all of these areas is appropriately recognised by including the following sentence to paragraphs 1.7.1 to 1.7.3 as follows: <u><i>These areas may contain regionally important infrastructure.</i></u>	Grant in kind A number of submitters sought to have their uses, values or particular interests explicitly identified in the coastal management areas, despite such uses and values being common to most if not all coastal management areas. The Hearing Panel recommends minor and inconsequential changes to the first paragraph of Section 1.7 of the Plan to clarify that coastal management areas are areas or zones dividing the coastal marine area for management purposes and for which specific rules apply. This will avoid the need for unnecessary and potentially redundant commentary in the Plan that attempts to describe common attributes,

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>characteristics and values that in all likelihood apply across all coastal management areas such as the presence of regionally important infrastructure (plus other uses and values).</p> <p>The proposed revised paragraph would read as follows:</p> <p><i>The coastal marine area has been divided into five <u>coastal</u> management areas or zones. This division recognises that some areas have different management needs than other areas. These areas have been mapped in Schedule 1 <u>and specific rules apply</u> as follows: [...]</i></p>
Section 2.1 – Statutory and planning framework			
19 – South Taranaki District Council	54	Amend	No relief necessary
		Submitter seeks amendment to Section 2.1 [Statutory and planning framework] of the Plan to reference a commitment to integrated management of resources, recognition of the role of district plans, and working with the territorial local authorities of the region.	The Hearing Panel believes that Section 2.1 is not the most appropriate place to detail commitments to integrated management and notes that such matters have been addressed elsewhere in the Plan, particularly Policy 2 [Integrated management] and in the methods of implementation.
26 – Transpower NZ Ltd	55	Support	Accept
		Retain reference to the <i>National Policy Statement on Electricity Transmission 2008</i> within Section 2.1 of the Plan.	Support noted. Reference is retained as notified.
40 – Te Rūnanga o Ngāti Mutunga	56	Amend	Accept
		Submitter seeks amendment to Section 2.1 [Statutory and planning framework] of the Plan to reference the <i>Ngāti Mutunga Claims Settlements Act 2006</i> and the <i>Ngāti Mutunga Iwi Environmental Management Plan</i> and other iwi settlement legislation and iwi environmental management plans.	<p>The Hearing Panel recommends granting the relief sought.</p> <p>The Hearing Panel recommends amending Section 2 to include a new sub section relating to iwi management plans and to expand the scope of Section 2.5 [Other legislation] to reference Treaty of Waitangi settlement legislation.</p>
42 – Ngāti Rahiri Hapū	57	Amend	Decline
		Submitter seeks amendment of Section 2.1 [Statutory and planning framework] of the Plan to state that the purpose of the Plan is to “direct” or “guide” the Council in coastal management under the RMA.	<p>The Hearing Panel recommends declining the relief sought.</p> <p>The Hearing Panel considers that the commentary in Section 2.1 is consistent with the purpose statement for regional plans as set out in Section 63 of the RMA. Pursuant to Section 63 of the RMA, the purpose of regional plans is “...to assist a regional council to carry out its functions in order to achieve the purpose of the RMA”.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
48 – Taranaki District Health Board	58	Amend Submitter seeks amendment of Section 2.1 [Statutory and planning framework] of the Plan to include a section on the principles of Te Tiriti o Waitangi and how these principles guide the work undertaken in this area.	Decline The Hearing Panel recommends declining the relief sought. The Hearing Panel notes that the <i>Regional Policy Statement for Taranaki</i> already includes a section and discussion on taking into account the principles of the Treaty of Waitangi and includes a declaration of understanding between iwi o Taranaki and the Taranaki Regional Council. The Hearing Panel does not believe it necessary for all subordinate planning documents to repeat such information. Furthermore, there are risks in doing so through unintended inconsistencies in wording etc. The Hearing Panel notes that the contents of the Proposed Plan are consistent with the matters set out in Section 67 [Content of regional plans] of the RMA. It is also not inconsistent with the <i>National Planning Standards</i> recently gazetted by the Ministry for the Environment, which seeks alignment in the format and structure of RMA plans across New Zealand. Some care must be necessarily had with adopting too much 'optional' content. In the drafting of the Plan, the Council has deliberately limited introductory and background content and detail so as to focus on the matters that must be included in a Plan (objectives, policies and rules).
Further submissions –Te Rūnanga o Ngāti (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
Section 2.2 – New Zealand Coastal Policy Statement			
43 – Royal Forest and Bird Protection Society	59	Amend Submitter seeks amendment to Section 2.2 [New Zealand Coastal Policy Statement] of the Plan to read: <i>The New Zealand Coastal Policy Statement 2010 (NZCPS) contains objectives and policies to address key national matters facing the coastal environment and to achieve the purpose of the RMA. <u>By giving effect to the New Zealand Coastal Policy Statement in this Plan Council's responsibilities to provide for matters of national importance under section 6 of the RMA is also achieved for the coastal environment.</u></i> <i>Policies within the New Zealand Coastal Policy Statement address matters including:</i> <i>[...]</i> <u>protection of</u> indigenous biological diversity.	Accept in part The submitter believes the opening paragraph of Section 2.2 of the Plan to be misleading as the <i>New Zealand Coastal Policy Statement</i> is not limited to "key national matters" but is to achieve the purpose of the RMA in relation to the coastal environment. The submitter seeks an amendment to Section 2.2 to note that by giving effect to the <i>New Zealand Coastal Policy Statement</i> in this Plan Council's responsibilities to provide for matters of national importance under section 6 of the RMA are also achieved for the coastal environment. The Hearing Panel recommends declining this part of the relief noting that, at best, this statement and level of detail/discussion is unnecessary as Section 2 is only meant to be a high level overview of statutes and regulations relevant to the Coastal Plan. At worst the statement is misleading as while this Plan is likely to be the primary plan for giving effect to the <i>New Zealand Coastal Policy Statement</i> and coastal matters, it is not the only regulatory document. Other plans, including the <i>Regional Policy Statement for Taranaki</i> and the <i>Regional Freshwater Plan</i> , will

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>also assist to give effect to the <i>New Zealand Coastal Policy Statement</i> and national matters of importance under section 6 of the RMA.</p> <p>In relation to the list of matters covered by the <i>New Zealand Coastal Policy Statement</i> policies, the Hearing Panel recommends granting the relief sought by the submitter by amending reference to "<i>indigenous biological diversity</i>" to refer to "<i>protection of indigenous biological diversity</i>".</p>
45 – Powerco	60	Amend Submitter seeks amendment to Section 2.2 [New Zealand Coastal Policy Statement] of the Plan to specifically recognise and provide for infrastructure. This could be achieved by adding an additional bullet point: <u><i>Recognising and providing for infrastructure.</i></u>	Decline A number of submitters sought to have their areas of interests explicitly identified in the commentary on the <i>New Zealand Coastal Policy Statement</i> , in this case recognition and provision for infrastructure. The Hearing Panel notes the commentary is deliberately high level and that infrastructure is already adequately covered under references to development. The Hearing Panel suggests that the Plan objectives, policies and rules adequately recognise and provide for infrastructure.
Further submissions – Transpower (26)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	61	Amend Submitter seeks amendment to Section 2.2 [New Zealand Coastal Policy Statement] of the Plan to specifically recognise and provide for infrastructure. This could be achieved by adding an additional bullet point: <u><i>Recognising and providing for infrastructure.</i></u>	Decline The submitter wishes to extend the scope of Section 2.2 of the Plan to include infrastructure. A number of submitters sought to have their areas of interests explicitly identified in the commentary on the <i>New Zealand Coastal Policy Statement</i> , in this case recognition and provision for infrastructure. The Hearing Panel notes the commentary is deliberately high level that infrastructure is already adequately covered under references to 'development'. The Hearing Panel suggests that the Plan objectives, policies and rules adequately recognise and provide for infrastructure.
Section 2.3 – Marine and Coastal Area (Takutai Moana) Act 2011			
41 – Te Korowai o Ngāruahine Trust	62	Amend Submitter seeks amendment to Section 2.3 [Marine and Coastal Area (Takutai Moana) Act 2011] of the Plan to note that the iwi of Taranaki have claims before the Crown for both customary marine title and protected customary right and explain to the community what these statutory acknowledgements will mean.	Accept The Hearing Panel agrees to the relief sought and recommend amending Section 2.3 of the Plan to insert a new sentence that notes that the iwi of Taranaki have claims before the Crown for both customary marine title and protected customary right. Commentary preceding the insertion already explains to the community what these statutory acknowledgements will mean.
Further submissions – Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	63	Support	Accept in part
		Retain Section 2.3 of the Plan as notified.	The submitter's support is noted. However, the Hearing Panel notes that in response to relief sought by another submitter, minor amendments have been made to Section 2.3 [<i>Marine and Coastal Area (Takutai Moana) Act 2011</i>] to further explain that the iwi of Taranaki have claims before the Crown for both customary marine title and protected customary rights.
Section 2.5 – Other legislation			
43 – Royal Forest and Bird Protection Society	64	Amend	Decline
		Submitter considers it helpful to explain that other legislation applies in the coastal environment and to outline the relationship these have to the Plan. In particular, Submitter seeks amendment to Section 2.5 [Other legislation] of the Plan to: <ul style="list-style-type: none">consider the legislation and Acts under Policy 5 of the <i>New Zealand Coastal Policy Statement</i>recognise the relationship between the Plan and the Exclusive Economic Zone and how the Plan addresses, or not, the effects that extend beyond the coastal marine area or into the coastal marine areaexplain the relationship between this Plan and other Acts/legislation.	<p>The Hearing Panel recommends declining the relief sought.</p> <p>Section 2.5 of the Plan already highlights the need for activities to ensure they comply with other relevant legislation, regulations and bylaws. The Hearing Panel therefore does not believe it necessary to specify or detail the relationship these might have with the Plan. Such detail was not required for the <i>New Zealand Coastal Policy Statement</i> and nor is it required for regional plans.</p> <p>The Hearing Panel further notes that the contents of the Proposed Plan are consistent with the matters set out in Section 67 [Content of regional plans] of the RMA. Given that the Government has just released the <i>National Planning Standards</i> which set out the structure, content and form for councils across New Zealand to adopt – some care must be necessarily had with adopting too much 'optional' content to avoid plans becoming verbose. In the drafting of the Plan, Council has deliberately limited introductory and background content and detail so as to focus on the matters that must be included in a Plan (objectives, policies and rules).</p> <p>The Hearing Panel notes that, in the development of the Plan, full consideration has been given to other relevant statutes and regulations. However, the Hearing Panel does not believe that it is necessary for the Plan to detail/explain the relationship between the Plan and other statutes. The list of legislation in Section 2.5 is not an exhaustive list. However, it is intended to contain the most relevant statutes that may apply to the coastal marine area and already identifies the <i>Conservation Act</i> which is identified in Policy 5 of the <i>New Zealand Coastal Policy Statement</i>.</p>
Further submissions– Trans-Tasman Resources Ltd (6)		Oppose in part/neutral in part	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
58 – Te Atiawa	65	Amend	Accept
		Submitter seeks amendment to Section 2.5 [Other legislation] of the Plan to include iwi settlement legislation – specifically, the <i>Te Atiawa Iwi Claims Settlement Act 2016</i> .	The submitter believes that it may be useful for Plan users to know that the iwi of Taranaki have claims before the Crown for both customary marine title and protected customary right. The Hearing Panel recommends amending Section 2 of the Plan to include a new sub section relating to iwi management plans and to expand the scope of Section 2.5 [Other legislation] to reference Treaty of Waitangi settlement legislation, including the <i>Te Atiawa Iwi Claims Settlement Act</i> as requested by the submitter.
60 – Te Kaahui o Rauru	66	Amend	Accept
		Submitter seeks amendment to Section 2.5 [Other legislation] of the Plan to include iwi settlement legislation – specifically, the <i>Ngaā Rauru Kīitahi Claims Settlement Act 2005</i> .	The submitter believes that it may be useful for Plan users to know that the iwi of Taranaki have claims before the Crown for both customary marine title and protected customary right. The Hearing Panel recommends amending Section 2 of the Plan to include a new sub section relating to iwi management plans and to expand the scope of Section 2.5 [Other legislation] to reference Treaty of Waitangi settlement legislation, including the <i>Ngaā Rauru Kīitahi Claims Settlement Act</i> as requested by the submitter.
NEW Section 2.6 – Iwi environmental management plans			
50 – Te Kāhui o Taranaki Trust	67	Amend	Accept
		Submitter seeks amendment of the Plan to include a new Section addressing iwi environmental management plans.	The Hearing Panel recommends granting the relief sought by the submitter by including a new section addressing iwi environmental management plans.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Section 3.1 – Taranaki coastal environment			
6 – Trans-Tasman Resources Ltd	68	Support Submitter supports Plan overview of the Taranaki coastal environment as it appropriately recognises that some activities require a coastal location and recognises that Taranaki is a mineral producing region to New Zealand.	Accept Support noted.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
7 – Waikato Regional Council	69	Amend The submitter notes that a source of sediment along the Waikato – Taranaki coastline is Mount Taranaki. While the exact quantity of sediment that travels along this coast is unknown, both activities inside and outside of the coastal marine area may affect the supply of the sediment and have a corresponding effect on coastal erosion and seeks amendment to Section 3.1 (or Policy 2 or similar relief) of the Plan to acknowledge that activities outside of the coastal marine area can have an effect on the coastal marine area.	No relief necessary The Hearing Panel does not believe it is necessary to make any amendments to Section 3.1 of the Plan to further highlight that activities outside of the coastal marine area can have effects on the coastal marine area. Such matters are already acknowledged in the commentary in Section 3.1 relating to integrated management and coastal water quality. The Hearing Panel also notes that this issue is further addressed within Policy 2(aa) of the Plan.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
21 – Climate Justice Taranaki	70	Amend Submitter seeks amendment to text on page 13 [Appropriate use and development] of the Plan to note central government's recent announcement that there will be no new offshore oil and gas exploration permits and it will be restricting new permits to only onshore Taranaki over the next three years.	Decline The Hearing Panel acknowledges that the current Government has recently changed its stance on offshore oil and gas permits. However, the Hearing Panel considers that amending the Plan to follow suit is an unnecessary level of detail and could potentially become out dated and/or inaccurate should this Government or successive government's change their position.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
21 – Climate Justice Taranaki	71	<p>Amend</p> <p>Submitter seeks amendment to page 15 [Coastal hazards] of the Plan to read: <i>[...] The risk of, or vulnerability to, coastal hazards may increase over time due to climate change and sea level rise.</i></p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought by the submitter and amending the commentary to note that climate change and sea level rise are heightening the risk of coastal hazards.</p> <p>This relief and other reliefs sought by submitters reads as follows: <i>The risk of, <u>and</u> vulnerability to, coastal hazards <u>will</u> increase over time, <u>for instance</u> due to climate change and sea level rise.</i></p>
26 – Transpower NZ Ltd	72	<p>Amend</p> <p>Submitter seeks amendment to text in Section 3.1 of the Plan on appropriate use and development to read: <i>Some activities rely upon a location in or near the coastal marine area, are dependent on the use of coastal resources, <u>or have technical, operational or locational constraints that mean they require a coastal marine area location.</u> Taranaki's coastal resources and developments play a crucial role in both the regional and national economy [...]</i></p>	<p>Accept in part</p> <p>The submitter seeks amendments to the commentary to make it clear within the Plan that there are also technical, locational and/or operational reasons why an activity requires a coastal location which are not based solely on the use of the coastal resource itself.</p> <p>The Hearing Panel agrees that there are a number of instances where the location of infrastructure or activities in the coastal marine area is appropriate taking into account technical, operational or locational requirements. The Hearing Panel recommends amending the relevant paragraph to refer to “functional need” and “operational need” and note that these terms are defined in the <i>National Planning Standards</i> and include locational considerations.</p>
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	
Further submissions – Fonterra (47)		Support	
40 – Te Rūnanga o Ngāti Mutunga	73	<p>Support</p> <p>Submitter supports the discussions on the coastal environment in Section 3.1 of the Plan and the aim to achieve integrated management of the coastal marine area (but are not convinced integrated management is reflected in the rules of the Plan).</p>	<p>No relief necessary</p> <p>Hearing Panel notes the submitter's support.</p> <p>In relation to the submitter's concerns that integrated management is not reflected in the rules, the Hearing Panel notes that while the rules pertain only to the coastal marine area (as intended), all rules are subject to the General Policies which cover the wider coastal environment and standards, terms and conditions and/or matters of discretion seek to address integrated management issues where relevant.</p>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	74	<p>Amend</p> <p>Submitter seeks amendment to Section 3.1 of the Plan to broaden the information, including reference the tauranga waka landing sites and the statutory acknowledgements that iwi have over a number of rivers and tributaries and land</p>	<p>Accept</p> <p>The Hearing Panel recommends minor changes to Section 3.1 of the Plan as requested by the submitter to include tauranga waka landing sites and also to</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		areas within the coastal marine area environment, to promote readers' awareness and knowledge about the depth of relationship that Māori have with the coast.	recognise rivers and tributaries and land areas identified in Appendix 2 [Statutory acknowledgements].
Further submissions – Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>The amended section would read as follows:</p> <p><i>Wāhi tapu, sites, or places of cultural significance, <u>including tauranga waka landing sites</u>, taonga, and customary resources, are integral to the identity, well-being and cultural integrity of tangata whenua [...]</i></p> <p><i>It is important that the relationship of tangata whenua with the coastal environment is recognised and provided for (refer 5 below). <u>That includes rivers and tributaries and land areas identified in Appendix 2 [Statutory acknowledgements] that lie landward of the coastal marine area boundary.</u></i></p>
43 – Royal Forest and Bird Protection Society	75	<p>Amend</p> <p>Submitter seeks amendment to Section 3.1 of the Plan by:</p> <ul style="list-style-type: none"> amending the third paragraph to recognise existing pressures on the coastal environment, including from beyond the coastal marine area, and that low current demand does not mean management of effects can be relaxed amending the text under "Integrated management" to recognise: the effects of subdivision, use and development on land in the coastal environment on the coastal marine area; that demand for activities in this area is high; the need to provide for migration of coastal habitat landward as a result of climate change. 	<p>Accept in part</p> <p>Of note, proposals in this Plan represent an overall increase in the level of protection for coastal uses and values. As noted in previous requests for added commentary or background information, the Hearing Panel recommends that background information, including Section 3.1 which provides an overview of the Taranaki coastal environment, be kept at a high level.</p> <p>Notwithstanding the above, the Hearing Panel recommends minor amendments to Section 3.1 that partially address the reliefs sought by the submitter. It is proposed that the third paragraph of Section 3.1 be amended to include a new sentence that reads as follows:</p> <p><u><i>Notwithstanding generally low use and development, it remains important that adverse effects of use and development continue to be avoided, remedied or mitigated and that, as far as is practicable, take into account the wider coastal environment.</i></u></p>
Further submissions – Trans-Tasman Resources Ltd		Oppose	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>Other consequential changes are proposed in the commentary under integrated management to also recognise that demand for activities and the effects of subdivision, use and development on land in the coastal environment can be high. However, the Hearing Panel does not recommend commentary being expanded to discuss the specifics of providing for the migration of coastal habitats landward due to climate change.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	76	Amend Submitter seeks further amendment to Section 3.1 of the Plan by deleting the text under “ <i>Appropriate use and development</i> ”. Alternatively amend to address as per submitters previous comments made on this matter.	Accept in part The submitter suggests that it is not appropriate to consider activities as “ <i>appropriate use and development</i> ” on the basis of the benefits of the activities. The Hearing Panel agrees noting that the commentary does not get into the specifics of what is appropriate or not. Such determinations can only be made in reference to the Plan policies. Accordingly, the Hearing Panel recommends amending the heading to “ <i>Use and development</i> ” to more accurately reflect this section’s content. However, the Hearing Panel does not recommend deleting the text itself.
Further submissions – Transpower (26)		Oppose	
43 – Royal Forest and Bird Protection Society	77	Amend Submitter seeks further amendment to Section 3.1 of the Plan by amending the text under “ <i>Natural and historic heritage</i> ” to include “intrinsic” in the list of values (in the first paragraph) and to specify that natural heritage captures the characteristics and values in Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> (or use wording consistent with those policies).	Accept in part The Hearing Panel recommends amending Section 3.1 of the Plan to include “intrinsic” in the list of values (in the first paragraph) under “ <i>Natural and historic heritage</i> ”. However, the Hearing Panel does not believe it is necessary to specify that natural heritage captures the characteristics and values in Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> .

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	78	<p>Amend</p> <p>Submitter seeks amendment to the coastal hazards commentary in Section 3.1 of the Plan to read:</p> <p><i>The coastal environment is at high risk of coastal hazards area. Risks include tornados, coastal erosion, tsunami, storm surges, and cliff rock falls and slumps. The risk of, or and vulnerability to, coastal hazards may increase over time, <u>for instance</u> due to climate change and sea level rise.</i></p> <p><i>Although most natural processes that cause coastal hazards originate at sea, the major effects of these processes are nearly always felt on land. The Taranaki coastline is continually influenced by the natural forces of wind and waves. This, coupled with soft geology found in some localities around the coastline, means that the most significant coastal hazard in Taranaki is coastal erosion. Although coastal erosion and other hazards are generally a natural phenomenon, human activity in the coastal marine area may influence the susceptibility of people, property and the environment to loss or damage on account of coastal hazards. <u>It is important that use and development of the coastal marine area does not increase coastal hazard risk to people or property to unacceptable levels.</u></i></p> <p><i>Similarly, activities in the coastal marine area may also impact on the health or safety of people or property, including aircraft or navigational safety. It is important that <u>these activities do not use and development of the coastal marine area does not increase coastal hazard risk or</u> pose a threat to the health and safety of people or property (refer 7 below).</i></p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought in addition to the reliefs sought by other submitters. The amended section reads as follows:</p> <p><i>The coastal environment is at high risk of coastal hazards. Risks include tornados, coastal erosion, tsunami, storm surges, and cliff rock falls and slumps. The risk of, <u>and</u> vulnerability to, coastal hazards <u>will</u> increase over time, <u>for instance</u> due to climate change and sea level rise.</i></p> <p><i>Although most natural processes that cause coastal hazards originate at sea, the major effects of these processes are nearly always felt on land. The Taranaki coastline is continually influenced by the natural forces of wind and waves. This, coupled with the soft geology found in some localities around the coastline, means that the most significant coastal hazard in Taranaki is coastal erosion. Although coastal erosion and other hazards are generally a natural phenomenon, human activity in the coastal marine area may influence the susceptibility of people, property and the environment to loss or damage on account of coastal hazards. <u>It is important that use and development of the coastal marine area does not increase coastal hazard risk to people or property to unacceptable levels.</u></i></p> <p><i>Similarly, activities in the coastal marine area may also impact on the health or safety of people or property, including aircraft or navigational safety. 58 – Te Atiawa	79	<p>Support</p> <p>Submitter notes support for the discussion on the coastal environment which includes integrated management, coastal water quality, appropriate use and development, natural and historic heritage, tangata whenua values and relationships, public amenity and enjoyment and coastal hazards.</p>	<p>Accept</p> <p>Support noted.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Section 3.2 – Managing the Taranaki coastal environment			
6 – Trans-Tasman Resources Ltd	80	Support Retain objectives, policies, rules and methods that recognise and provide for appropriate use and development of natural resources (which under the RMA includes minerals) within the coastal environment.	Accept Support noted.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
26 – Transpower NZ	81	Support Retain matters identified in Section 3.2 of the Plan to be addressed by Plan objectives, policies, rules and methods.	Accept Support noted.
40 – Te Rūnanga o Ngāti Mutunga	82	Amend Submitter notes concerns that public access is not always appropriate, in this case, for cultural and ecological reasons. Submitter seeks amendment to point 6 in Section 3.2 [Matters to be addressed] of the Plan to read: <i>6. Ensuring people can continue to access, use and enjoy the Taranaki coast where cultural and ecological values are not adversely impacted upon.</i>	Accept kind The Hearing Panel agrees that there are instances where coastal public access is not appropriate in addition to those mentioned by the submitter (e.g. ecological or public health and safety). Instances where coastal public access is not appropriate are detailed later in Policy 17. The Hearing Panel therefore recommends minor amendments to bullet point 6 to read: <i>6. Ensuring people can continue to access, use and enjoy the Taranaki coast, where and when it is appropriate to do so.</i>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	83	Amend Submitter supports Section 3.2 [Matters to be addressed] of the Plan subject to amending bullet point 7 to read: <i>7. Ensuring use and development of the coastal marine area does not increase coastal hazard risk to unacceptable levels or pose a threat to the health and safety of people and property.</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
57 – Heritage New Zealand	84	<p>Amend</p> <p>The submitter requests that Section 3.2 [Matters to be addressed] bullet point 5 be amended to refer to all “Māori” in place of “tangata whenua” to follow similar wording within the RMA. The submitter suggests that iwi/hapū that no longer hold mana whenua can still have important relationships with an area, although they no longer have mana whenua, and such situations need to be provided for within this objective.</p> <p>Submitter seeks amendment to bullet point 5 in Section 3.2 [Matters to be addressed] of the Plan to read:</p> <p><i>5. Ensuring the relationship of Māori tangata whenua, including their traditions and cultural values and their culture and traditions with their ancestral lands, water, sites, waahi tapu, and other taonga are recognised and provided for in the management of Taranaki's coastal environment.</i></p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought by the submitter to refer more generically to Māori, in place of tangata whenua. The Hearing Panel notes support from iwi in further submissions. The amended provision reads as follows:</p> <p><i>5 Ensuring the relationship of <u>Māori and their culture and traditions with their ancestral lands, water, sites, waahi tapu, and other taonga</u> are recognised and provided for in the management of Taranaki's coastal environment.</i></p>
Further submissions - Te Korowai o Ngāruahine Trust (41), Te Kotahitanga o Te Atiawa Trust (58)		Support	
58 - Te Atiawa	85	<p>Amend</p> <p>Submitter supports how the Council intends to manage the Taranaki coastal environment as outlined in Section 3.2 of the Plan, however, the submitter's concerns are that public access will not always appropriate, in this case, for cultural reasons and requests amending bullet point 6 to read:</p> <p><i>6. Ensuring people can continue to access, use and enjoy the Taranaki Coast <u>where cultural values are not adversely impacted upon.</u></i></p>	<p>Grant in kind</p> <p>There are other circumstances, where coastal public access is not appropriate (e.g. ecological or public health and safety). Instances where coastal public access is not appropriate are detailed later in Policy 17. The Hearing Panel therefore recommends minor amendments to bullet point 6 to read:</p> <p><i>6. Ensuring people can continue to access, use and enjoy the Taranaki coast, <u>where and when it is appropriate to do so.</u></i></p>

4.3 Objectives

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Objective 1 – Integrated management			
2 – Federated Farmers	86	Support	Accept
		Submitter supports Objective 1 of the Plan as notified.	Objective 1 is retained subject to the minor amendment in response to Submitter (20) below.
6 – Trans-Tasman Resources Ltd	87	Support	Accept
		Submitter supports Objective 1 of the Plan as notified.	Objective 1 is retained subject to the minor amendment in response to Submitter (20) below.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
19 – South Taranaki District Council	88	Amend	Decline
		Submitter seeks amendment of Objective 1 of the Plan to add reference to working cooperatively with the territorial local authorities and iwi of the region.	The relief sought by the submitter introduces an unnecessary level of specificity to the Plan objectives and risks excluding other elements of integrated management that are addressed later on in the policies and methods. The Hearing Panel suggests it is more appropriate to provide this level of detail in the policies and methods that follow. Of particular note, the detail sought by the submitter is already included in Policy 2(g) of the Plan, which refers to working cooperatively with territorial authorities and tangata whenua (and others) and supporting methods of implementation.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
20 – Meridian Energy Limited	89	Amend	Accept
		Submitter seeks amendment of Objective 1 of the Plan to read: <i>Management of the coastal environment, including the effects of <u>subdivision</u>, use and development on land, air and fresh water, is carried out in an integrated manner.</i>	The Hearing Panel notes that subdivision falls outside the statutory functions of regional councils and is instead the responsibility of district and unitary councils pursuant to Section 31 of the RMA. However, in this instance the objective relates to integrated management which may include activities regulated by other parties. The Hearing Panel therefore recommends that subdivision be referenced in the objective. In addition to the relief suggested above, the Hearing Panel also recommends making consequential amendments to Policy 2 [Integrated management] clause (g)

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			to recognise subdivision alongside use and development in areas beyond the coastal marine area. A new definition for "subdivision" is also recommended.
35 – Radio New Zealand Ltd	90	Support	Accept
		Retain Objective 1 of the Plan as notified.	Objective 1 is retained subject to the minor amendment in response to Submitter (20) above.
43 – Royal Forest and Bird Protection Society	91	Amend	Accept in part
		Submitter seeks amendment of Objective 1 of the Plan to read: <i>Management of the coastal environment, including the effects of <u>subdivision</u>, use and development on land, air and fresh water, is carried out in an integrated manner, <u>including between regional and district council functions</u>.</i>	The Hearing Panel notes that subdivision falls outside the statutory functions of regional councils and is instead the responsibility of district and unitary councils pursuant to Section 31 of the RMA. However, in this instance the objective relates to integrated management which may include activities regulated by other parties. The Hearing Panel therefore recommends that subdivision be referenced in the objective. In addition to the relief suggested above, the Hearing Panel also recommends making consequential amendments to Policy 2 [Integrated management] clause (g) to recognise subdivision alongside use and development in areas beyond the coastal marine area. A new definition for "subdivision" is also recommended. In terms of suggested amendments to highlight integrated management between regional and district functions, the Hearing Panel suggest it would be more appropriate to provide this level of detail in the policies and methods that follow. Of note, the detail sought by the submitter is already included in Policy 2(g) of the Plan, which refers to working cooperatively with territorial authorities (and others) and supporting methods of implementation. However, the Department of Conservation and many other agencies also have an important statutory role to play.

		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
13 – Spark New Zealand Trading Limited	98	Support	Accept
		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
14 – Vodafone New Zealand Limited	99	Support	Accept
		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
25 – New Zealand Petroleum and Minerals	100	Support	Accept
		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
26 – Transpower NZ Ltd	101	Amend	Grant in kind
		Submitter seeks amendment of Objective 2 of the Plan to read:	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>Natural and physical resources of the coastal environment are used efficiently, and activities that depend on the use and development of these resources, <u>or have technical, operational and/or locational requirements</u>, are provided for in appropriate locations.</i>	The Hearing Panel recommends amending Objective 2, and granting the relief sought in kind, by adopting slightly different language to that suggested by the submitter in order to maintain consistency with other areas of the Plan referring to functional need and operational need. The Hearing Panel considers all matters requested by the submitter (technical and locational requirements) to be provided within the definitions of these terms. The amended Objective would read as follows: <i>Natural and physical resources of the coastal environment are used efficiently, and activities <u>that have a functional need or an operational need</u>, that depend on the use and development of these resources, are provided for in appropriate locations.</i>
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	
Further submissions – Fonterra (47)		Support	
27 – Taranaki Chamber of Commerce	102	Support	Accept
		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
32 – Port Taranaki	103	Amend	Accept
		Submitter seeks amendment of Objective 2 of the Plan (or add new objective) to specifically address provision for ongoing development of strategically significant regional and national infrastructure, including Port Taranaki.	The Hearing Panel recommends amending Objective 2 to grant this and other related reliefs sought by the submitter. The amended Objective would read as follows: <i>Natural and physical resources of the coastal environment are used efficiently, and activities <u>that have a functional need or an operational need</u>, that depend on the use and development of these resources, are provided for in appropriate locations.</i>
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	
33 - New Zealand Defence Force	104	Support	Accept
		Retain Objective 2 of the Plan as notified.	Objective 2 is retained subject to minor amendments as requested by other submitters.
43 – Royal Forest and Bird Protection Society	105	Amend	Grant in kind
		Submitter seeks amendment to Objective 2 of the Plan to read: <i>Objective 2: <u>Appropriate Efficient</u> use and development</i> <i>Natural and physical resources of the coastal environment are used efficiently, and activities that depend on the use and development of these resources, are provided for in appropriate locations.</i>	The Hearing Panel notes that relief sought by the submitter confines the focus of the objective to “efficient” use and development. As a result many activities that might otherwise have been considered appropriate would no longer be recognised and provided for if the efficiency criterion only is applied. In so doing this might

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Trans-Tasman Resources Ltd (6), Transpower (26), Te Korowai o Ngāruahine Trust (41)		Oppose	mean that many activities that contribute to the social, economic and cultural well-being of people and communities could be unnecessarily restricted. The Hearing Panel further suggests that the proposed relief would derogate from the <i>New Zealand Coastal Policy Statement</i> – particularly Objective 6 [Use and development] and Policies 6 [Activities in the coastal environment] and 9 [Ports], which generally recognise and provide for activities in the coastal environment. The Hearing Panel recommends an alternative relief by amending the title of the objective to refer only to “Use and development”.
45 – Powerco	106	Support	Accept
		Retain Objective 2 of the Plan as notified.	Support noted. Objective 2 is retained subject to minor amendments as requested by other submitters.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	107	Support	Accept
		Retain Objective 2 of the Plan as notified.	Support noted. Objective 2 is retained subject to minor amendments as requested by other submitters.
47 – Fonterra	108	Amend	Decline
		Submitter seeks amendment of Objective 2 of the Plan to read: <i>Natural and physical resources of the coastal environment are used efficiently, and activities, including regionally important industry and infrastructure, that depend on the use and development of these resources are provided for in appropriate locations.</i>	The Hearing Panel recommends declining the relief requested by the submitter and notes that regionally important infrastructure and industry is already adequately provided for within the Objective. The Hearing Panel notes that objectives are intentionally high level and considers that the amendment is unnecessarily specific and verbose. The Hearing Panel notes that explicit recognition and provision for regionally important infrastructure and industries are provided for in the Plan policies.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41)		Oppose	
59 - KiwiRail	109	Support	Accept

14 – Vodafone New Zealand Limited	113	Support	Accept
		Retain Objective 3 of the Plan as notified.	Support noted. Objective 3 is retained subject to minor amendments as requested by other submitters.
20 – Meridian Energy Limited	114	Amend	Accept
		Submitter seeks amendment to Objective 3 of the Plan to read: <i>The use and ongoing operation of nationally and regionally important infrastructure and other existing lawfully established activities is protected from new or inappropriate <u>subdivision</u>, use and development in the coastal environment</i>	The Hearing Panel notes that subdivision falls outside the statutory functions of regional councils and is instead the responsibility of district and unitary councils pursuant to Section 31 of the RMA. However, activities occurring within the CMA and regulated by the Council may be adversely impacted by subdivision, use and development outside the CMA and regulated by other parties. The Hearing Panel therefore agrees with the submitter that subdivision should be referenced in the objective. A new definition for “ <i>subdivision</i> ” is also recommended.
23 – New Plymouth District Council	115	Support	Accept
		Retain Objective 3 of the Plan as notified.	Support noted. Objective 3 is retained subject to minor amendments as requested by other submitters.
26 – Transpower NZ Ltd	116	Amend	Accept
		Submitter supports Objective 3 of the Plan but seeks amendment of the title to read:	The Hearing Panel recommends granting the relief sought by amending the title of Objective 3 to read:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		Objective 3 Reverse sensitivity <i>Impacts on established operations and activities</i> The submitter contends that the relief sought would help to clarify the intent of the objective and is a more user friendly variant providing more direction for Plan users.	<i>Impacts on established operations and activities.</i>
32 – Port Taranaki	117	Support Retain Objective 3 of the Plan as notified	Accept Support noted. Objective 3 is retained subject to minor amendments as requested by other submitters.
33 - New Zealand Defence Force	118	Support Retain Objective 3 of the Plan as notified.	Accept Support noted. Objective 3 is retained subject to minor amendments as requested by other submitters.
35 – Radio New Zealand Ltd	119	Support Retain Objective 3 of the Plan as notified.	Accept Support noted. Objective 3 is retained subject to minor amendments as requested by other submitters.
43 – Royal Forest and Bird Protection Society	120	Amend The submitter believes that Objective 3 is in conflict with Policy 6(1)(e) of the <i>New Zealand Coastal Policy Statement</i> as it prioritises the protection of lawfully established activities over subsequent development, including new regionally significant infrastructure. Submitter seeks amendment of the Plan by deleting Objective 3: <i>The use and ongoing operation of nationally and regionally important infrastructure and other existing lawfully established activities is protected from new or inappropriate use and development in the coastal environment.</i>	Decline The Hearing Panel does not believe it is necessary or appropriate to delete Objective 3 noting that provision for new operations and activities in the coastal environment is already addressed in Objective 2 of the Plan. Objective 3 is viewed as upholding Policy 6(1) of the <i>New Zealand Coastal Policy Statement</i> as it provides protection for nationally and regionally important infrastructure. The objective also supports Policy 10 of the <i>National Policy Statement for Electricity Transmission</i> and the <i>National Environmental Standard for Telecommunication Facilities</i> which require the management of activities to avoid reverse sensitivity on the transmission and telecommunication networks. The Hearing Panel further believes that it is appropriate and equitable that the Objective/Plan address the management of adverse effects on other lawfully established activities. The Hearing Panel notes the wide level of support that has been indicated by other submitters for this Objective.

43 – Royal Forest and Bird Protection Society	128	Amend Submitter supports Objective 5 of the Plan but seeks new Plan provisions to align with the <i>National Policy Statement for Freshwater Management</i> , including establishing numeric and descriptive water quality objectives/targets and setting standards for water bodies, and estuaries and sites at sea, in this Plan.	Decline While a number of small consequential amendments are proposed to Plan provisions that may give effect to better alignment with the <i>National Policy Statement for Freshwater Management</i> , the Hearing Panel believes the establishment and setting of numeric and descriptive water quality objectives/targets and setting standards for water bodies, and estuaries and sites at sea in the Plan unnecessary. Of note, Taranaki generally has good quality coastal water. This is primarily due to the relatively small number of major point source discharges to the coastal marine area but is also attributable to the nature of our very small and few estuaries, and the very turbulent, wild and open Tasman Sea. The setting of robust, scientifically validated nutrient and other limits for Taranaki coastal waters would be technically difficult and costly to link and justify with the maintenance and enhancement of specific coastal values and can be more effectively imposed through the consenting process associated with point source discharges.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	129	Support Retain Objective 5 of the Plan as notified.	Accept Support noted. Objective 5 is retained subject to minor amendments as requested by other submitters.

48 – Taranaki District Health Board	131	Support Retain Objective 5 of the Plan as notified.	Accept Support noted. Objective 5 is retained subject to minor amendments as requested by other submitters.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
61 – Te Rūnanga o Ngāti Ruanui Trust	132	Amend Submitter seeks amendment to Objective 5 of the Plan to read: <i>Objective 5: Coastal water quality</i> Water quality <i>and mauri values</i> in the coastal environment is maintained and enhanced.	Grant in kind The Hearing Panel does not recommend granting the relief sought. The Hearing Panel notes that māuri has already been addressed in Objective 4, which relates to the life supporting capacity of coastal water, land and air. This is considered a more appropriate fit for māuri than Objective 5, which relates only to water quality (māuri is defined in the Regional Policy Statement as meaning essential life force or principle, a metaphysical quality inherent in all things, both animate and inanimate). Water quality is likely to be only one component of māuri and excludes considerations such as the ecological functioning and health of the environment overall. Following pre-hearing engagement, an alternative relief was recommended. The Hearing Panel recommends amending the introduction to section 4 to highlight that objectives need to be read together, including the need to safeguard māuri values (as identified in Objective 5).

		Submitter seeks amendment to Objective 8 of the Plan to read: <i>[...] <u>protect indigenous biodiversity in the coastal environment</u>.</i>	Objective 8 has two aspects. The first part of the Objective relates to all indigenous biodiversity in the coastal environment being “maintained and enhanced”, while the second part of the Objective relates to the protection of some aspects of biodiversity, i.e. significant indigenous biodiversity. The Hearing Panel does not believe it appropriate or necessary to ‘protect’ all aspects of indigenous biodiversity from the adverse effects of activities. The Section 5 purpose [Sustainable management] of the RMA involves use and
Further submissions – Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			development as well as protection. Not all aspects of indigenous biodiversity necessarily must be protected. 'Protecting' all indigenous biodiversity rather than " <i>maintaining and enhancing</i> " would be overly prescriptive. Of note the Objective already seeks to protect "significant indigenous biodiversity", which is directly aligned with Policy 11 of the <i>New Zealand Coastal Policy Statement</i> .
45 – Powerco	151	Amend Submitter seeks that Objective 8 of the Plan (and corresponding policies and rules) provide appropriately for the operation, maintenance and upgrade of existing regionally important infrastructure.	No relief necessary No precise details of amendments sought to Objective 8 have been provided. However, the Hearing Panel notes that Section 4 of the Plan provides a suite of objectives that together provide for a broad range of values and uses, including nationally and regionally important infrastructure. Objectives relating to regionally important infrastructure are separately addressed in Objectives 2 and 3 of the Plan. In determining the weighing or priority given to particular values the Plan policies also apply. The Hearing Panel does not believe any amendments to Objective 8 are therefore necessary. Notwithstanding the above, in response to reliefs sought elsewhere by the submitter (and others), consequential amendments have been made in other Plan provisions that further recognise and provide for the operation, maintenance and alteration (upgrade) of existing regionally important infrastructure.
Further submissions – Transpower NZ (26)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	153	Amend Seek that Objective 8 (and corresponding policies and rules) provide appropriately for the operation, maintenance and upgrade of existing regionally important infrastructure. Objective 9 – Relationship of tangata whenua with the coastal environment			
48 – Taranaki District Health Board	154	Support Retain Objective 9 of the Plan as notified.	Accept Support noted. Objective 9 is retained subject to minor amendments as requested by other submitters.
Further submissions – Port Taranaki Ltd (32)		Support	
57 – Heritage New Zealand	155	Amend The submitter requests that Objective 9 be amended to refer to all “Māori” in place of “tangata whenua” to follow similar wording within the RMA. The submitter suggests that iwi/hapū that no longer hold mana whenua can still have important relationships with an area, although they no longer have mana whenua, and such situations need to be provided for within this objective. Submitter seeks amendment to the title and content of Objective 9 of the Plan to read: <i>Objective 9: Relationship of Māori tangata whenua with the coastal environment</i> <i>Traditional and continuing relationships of Māori tangata whenua and their cultures and traditions with the coastal environment and their ancestral lands, water, sites, waahi tapu and other taonga, including the role of tangata whenua as kaitiaki, are recognised and provided for and protected from inappropriate use and development of the coastal marine area.</i>	Accept in part The Hearing Panel notes that iwi, hapū and whanau themselves have not commented on this submission point nor sought any similar changes. Nor has relief of this type been sought from the wider Māori community or others. Tangata whenua is considered more appropriate in the Taranaki context whereby the Council seeks to explicitly recognise tangata whenua relationships with the coast in the Plan objectives and policies. Unless iwi authorities themselves seek a change (which they have not done to date), the Hearing Panel recommends retaining reference to tangata whenua (rather than all Māori) in the Objective. However, other amendments sought by the submitter to better align language with the RMA are recommended. The revised Objective would read as follows: <i>Traditional and continuing relationships of tangata whenua and their cultures and traditions with their ancestral lands, water, sites, waahi tapu and other taonga in the coastal environment, including the role of tangata whenua as kaitiaki, are recognised and provided for.</i>
Objective 10 – Treaty of Waitangi			
41 – Te Korowai o Ngāruahine Trust	156	Amend The submitter supports the introduction of Te Tiriti o Waitangi because, through the Plan, it embeds the Treaty into the heart of decision making considerations. Submitter seeks amendment to Objective 10 of the Plan to: <ul style="list-style-type: none">read “...Give effect to The principles of the Treaty of Waitangi including the principles of ... in the management of the coastal environment”	Accept in part The Hearing Panel notes the support from the submitter for the introduction of the Treaty of Waitangi into the objectives section of the Plan. However, the Hearing Panel does not recommend amending the Objective to “give effect” to the Treaty of Waitangi as the current wording of the Objective is already consistent with Objective 3 and Policy 2 of the New Zealand Coastal Policy Statement, which

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> reference the following guiding principles: mai te maunga, Taranaki kit e tai a Kupe, whakapapa, kaitiakitanga, manaakitanga, whanaungatanga, kawanatanga, and rangatiratanga. 	<p>requires persons exercising functions and powers under the RMA to "take into account", rather than "give effect to", the principles of the Treaty of Waitangi.</p> <p>The submitter further seeks that the Council reinstate (from the draft Plan) five values that encapsulate the relationship between iwi o Taranaki and the coastal environment. The Hearing Panel recommends granting this part of the relief sought and amending the Objective to refer to the guiding principles to improve the integration of Māori principles throughout the Plan.</p> <p>The amended Objective 10 would read as follows:</p> <p><i>The principles of the Treaty of Waitangi, including the principles of <u>mai te maunga Taranaki kite tai a Kupe, whakapapa, kaitiakitanga, manaakitanga, whanaungatanga, kawanatanga, and rangatiratanga</u>, are taken into account in the management of the coastal environment.</i></p>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
48 – Taranaki District Health Board	157	Support	Accept

58 – Te Atiawa	158	Amend	Decline
		<p>Submitter seeks amendment to Objective 10 of the Plan to read:</p> <p><i><u>Give effect to</u> the principles of the Treaty of Waitangi, including the principles of kawanatanga, rangatiratanga, partnership, active participation, resource development and spiritual recognition, are taken into account in the management of the coastal environment.</i></p>	<p>The Hearing Panel does not recommend amending the Objective to "give effect" to the Treaty of Waitangi as the current wording of the Objective is already consistent with Objective 3 and Policy 2 of the <i>New Zealand Coastal Policy Statement</i>, which requires persons exercising functions and powers under the RMA to "take into account", rather than "give effect to", the principles of the Treaty of Waitangi.</p>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Objective 11 – Historic heritage			
20 – Meridian Energy Limited	159	Amend	Accept
		<p>Submitter seeks amendment to Objective 11 of the Plan to read:</p> <p><i>Historic heritage in the coastal environment is protected from inappropriate <u>subdivision</u>, use and development.</i></p>	<p>The Hearing Panel notes that the control of subdivision is not one of the Council's functions under section 30 of the RMA, however, it is permissible for regional plans to included reference to subdivision in relevant objectives and policies if it serves one of the Council's other functions, for example, integrated management.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel therefore recommends amending the provision as sought by the submitter so that it refers to subdivision alongside use and development for the purpose of assisting the Council in integrated management matters. A new definition for "subdivision" is also recommended.
43 – Royal Forest and Bird Protection Society	160	Support Retain Objective 11 of the Plan as notified.	Accept Support noted. Objective 11 is retained as notified.
Further submissions – Port Taranaki Ltd (32)		Support	
57 – Heritage New Zealand	161	Amend Submitter seeks amendment to Objective 11 of the Plan to read: <i><u>Significant historic heritage in the coastal environment is protected from inappropriate use and development of the coastal marine area, and the extensive but limited knowledge of historic heritage in the coastal environment is recognised.</u></i>	Grant in kind The Hearing Panel note that the Plan already gives partial relief to the submitter in that Objective 11 refers to historic heritage generally rather than "significant historic heritage". The submitter seeks further amendments to Objective 11 – similar in kind to Objective 6 of the <i>New Zealand Coastal Policy Statement</i> – to recognise the extensive but limited knowledge of historic heritage in the coastal environment. The Hearing Panel notes that the issue of extensive, but limited knowledge of historic heritage in the coastal environment, has already been highlighted in the Section 32 Evaluation Report and the Panel does not believe it is necessary to restate such matters in Plan objectives. The Hearing Panel are also unclear as to how 'recognition' in a Plan objective would be monitored meaningfully. Accordingly, changes are not recommended to the Objective itself. Instead the Hearing Panel recommends an alternative relief involving consequential amendments in the background information of the Plan [Natural and historic heritage] to further highlight this issue.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	162	Amend Submitter seeks amendment to Objective 11 of the Plan to read: Objective 11: <i><u>Cultural and</u> Historic Heritage</i> <i><u>Cultural and</u> Historic heritage in the coastal environment is protected from inappropriate use and development.</i>	Accept The Hearing Panel recommends amending the Plan to grant the relief. The relief broadens the scope of the objective to address aspects of cultural heritage values that are not necessarily captured within the RMA definition of historic heritage. For

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	example, cultural heritage may include values such as taonga species for which a new policy has been recommended.
Objective 12 – Public use and enjoyment			
2 – Federated Farmers	163	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment <u>marine area</u>, is maintained and enhanced.</i>	Decline The Hearing Panel recommends declining the relief sought. Objective 12 applies to the coastal environment to promote integrated management of the coast across environmental domains and across local authority jurisdictional boundaries in a manner consistent with Policy 4 of the <i>New Zealand Coastal Policy Statement</i> . Confining Objective 12 to only the coastal marine area would derogate from that intent.
29 – Department of Conservation	164	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>The public's people's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment, is maintained and enhanced.</i>	Accept The submitter suggests that to improve alignment and consistency between Policy 18 [Public open spaces] of the <i>New Zealand Coastal Policy Statement</i> and Policy 17 of the Plan, the use of the term “public” should be used. It is noted that the word “people” can include private use. The Hearing Panel agrees and recommends granting the relief sought.
40 – Te Rūnanga o Ngāti Mutunga	165	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment is maintained and enhanced <u>without adversely impacting on cultural and environmental values</u>.</i>	Grant in kind The submitter's concerns are that people's use and development of the coastal environment should be subject to the appropriate management of adverse effects on cultural and environmental values. The Hearing Panel recommends granting the relief sought in kind by amending Objective 12 to recognise that people's use and enjoyment of the coast should not be to the detriment of other uses and values. However, the Hearing Panel does not believe it appropriate to specify or confine the Objective to the consideration of only those values specified in the submission. First, the suggested amendments by the submitter introduce a strict avoidance threshold with no regard to the significance of the effects. Second, the suggested amendments do not recognise other circumstances, where coastal public access should be subject to avoiding, remedying or mitigating adverse impacts on other uses and values (e.g. public health and safety). These are outlined later in Policy 17. The Hearing Panel recommend that Objective 12 be amended to read:
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>The public's use and enjoyment of the coastal environment, including amenity values, traditional practices and <u>appropriate</u> public access to and within the coastal environment, is maintained and enhanced.</i>
41 – Te Korowai o Ngāruahine Trust	166	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment is maintained and enhanced <u>without adversely impacting on cultural and environmental values.</u></i>	Grant in kind The submitter's concerns are that people's use and development of the coastal environment should be subject to the appropriate management of adverse effects on cultural and environmental values. The Hearing Panel recommends granting the relief sought in kind by amending Objective 12 to recognise that people's use and enjoyment of the coast should not be to the detriment of other uses and values. However, the Hearing Panel does not believe it appropriate to specify or confine the Objective to the consideration of only those values specified in the submission. First, the suggested amendments by the submitter introduce a strict avoidance threshold with no regard to the significance of the effects. Second, the suggested amendments do not recognise other circumstances, where coastal public access should be subject to avoiding, remedying or mitigating adverse impacts on other uses and values (e.g. public health and safety). These are outlined later in Policy 17. 			19(1), (3) and (4), and Policy 20 of the <i>New Zealand Coastal Policy Statement</i> . Other Plan provisions also apply.
47 – Fonterra	168	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment, is maintained and or enhanced <u>where appropriate</u>.</i>	Accept in part There are two parts to the relief sought by the submitter. First, the submitter considers that it is not possible to maintain <u>and</u> enhance public access at the same time and requests that this be recognised by using an 'or' instead of an 'and'. The Hearing Panel notes that this objective is not site specific and instead applies to the entire coastal environment and so is appropriate to maintain and enhance use and enjoyment across the coastal environment. In addition, the wording follows the wording used in the <i>New Zealand Coastal Policy Statement</i> policies 18 [Public open space] and Policy 19 [Walking access] which is considered appropriate to follow. The Hearing Panel therefore recommends declining this part of the relief. Second, the submitter suggests there may be occasions where it is necessary to limit public access, even if only temporarily. The Hearing Panel agrees that Objective 12 should be amended to recognise that people's use and enjoyment of the coast should not be to the detriment of other uses and values. Accordingly, the Hearing Panel recommends that Objective 12 be amended to read: <i><u>The public's</u> use and enjoyment of the coastal environment, including amenity values, traditional practices and <u>appropriate</u> public access to and within the coastal environment, is maintained and enhanced.</i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Oppose	
48 – Taranaki District Health Board	169	Support Retain Objective 12 of the Plan as notified.	Accept Support noted. Objective 12 is retained subject to minor amendments as requested by other submitters.
58 – Te Atiawa	170	Amend Submitter seeks amendment to Objective 12 of the Plan to read: <i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment is maintained and enhanced <u>without adversely impacting on cultural and environmental values</u>.</i>	Grant in kind The submitter's concerns are that people's use and development of the coastal environment should be subject to the appropriate management of adverse effects on cultural and environmental values. The Hearing Panel recommends granting the relief sought in kind by amending Objective 12 to recognise that people's use and enjoyment of the coast should not be to the detriment of other uses and values. However, the Hearing Panel do not consider it appropriate to specify or confine the Objective to the consideration of specific values. First, the suggested amendments by the submitter introduce a

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>strict avoidance threshold with no regard to the significance of the effects. Second, the suggested amendments do not recognise other circumstances, where coastal public access should be subject to avoiding, remedying or mitigating adverse impacts on other uses and values (e.g. public health and safety). These are outlined later in Policy 17.</p> <p>The Hearing Panel recommends that Objective 12 be amended to read:</p> <p><i>The public's use and enjoyment of the coastal environment, including amenity values, traditional practices and <u>appropriate</u> public access to and within the coastal environment, is maintained and enhanced.</i></p>
59 – KiwiRail	171	<p>Amend</p> <p>Submitter seeks amendment to Objective 12 of the Plan to read:</p> <p><i>People's use and enjoyment of the coastal environment, including amenity values, traditional practices and public access to and within the coastal environment, is maintained and enhanced <u>where appropriate</u>.</i></p>	<p>Grant in kind</p> <p>The Hearing Panel recommends that Objective 12 be amended to give effect to the submitter's request subject to minor amendment that also gives effect to relief sought by other submitters.</p> <p>The revised Objective would read as follows:</p> <p><i>The public's use and enjoyment of the coastal environment, including amenity values, traditional practices and <u>appropriate</u> public access to and within the coastal environment, is maintained and enhanced.</i></p>

Objective 13 – Coastal hazards risk and public health and safety			
2 – Federated Farmers	172	<p>Support</p> <p>Retain Objective 13 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Objective 13 is retained subject to minor amendments as requested by other submitters.</p>
20 – Meridian Energy Limited	173	<p>Amend</p> <p>Submitter seeks amendment to Objective 13 of the Plan to read:</p> <p><i>The risk of social, cultural, environmental, and economic harm from coastal hazards is not increased and public health, safety and property is not compromised by <u>subdivision</u>, use and development of the coastal <u>environment marine area</u>.</i></p>	<p>Accept in part</p> <p>The relief sought by the submitter has two parts. First, it seeks to expand the scope of the Objective to address subdivision and, second, it seeks to expand its scope so that it applies to the coastal environment (rather than just the coastal marine area).</p> <p>In relation to expanding the scope of Objective 13 so that it applies to the coastal environment (rather than just the coastal marine area), the Hearing Panel agrees that the objective should address the wider coastal environment. Accordingly, the Hearing Panel recommends amending the Objective to refer to the coastal environment but note that reference to the coastal marine area at the end of the</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>objective will be retained to reflect that the rules only addresses use and development within the coastal marine area.</p> <p>The Hearing Panel further recommends that the objective reference subdivision as sought by the submitter. The Hearing Panel recommends amending Objective 13 (in line with reliefs sought by other submitters) to read as follows:</p> <p><i>The risk of social, cultural, environmental, and economic harm <u>in the coastal environment</u> from coastal hazards is not increased and public health, safety and property is not compromised by use and development of the coastal marine area.</i></p>
43 – Royal Forest and Bird Protection Society	174	<p>Amend</p> <p>Submitter seeks amendment to Objective 13 of the Plan to address the wider coastal environment and to reflect the matters set out in Policy 24, Policy 25, Policy 26, and Policy 27 of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Accept in part</p> <p>No precise details of amendments sought to Objective 13 have been provided.</p> <p>The Hearing Panel recommends minor amendment to make clear that Objective 13 applies to the wider coastal environment and that only the second part of the objective that relates to use and development is specific to the coastal marine area.</p> <p>However, as previously noted in submission point 165, the Hearing Panel does not believe it necessary or appropriate to make further amendments to reflect the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel notes the Plan comprises a suite of objectives, policies and methods, including rules that collectively give effect to the <i>New Zealand Coastal Policy Statement</i>. Plan provisions need to be read together (while also acknowledging the different statutory responsibilities and powers of territorial authorities and district plans for giving effect to specific elements of the <i>New Zealand Coastal Policy Statement</i>).</p> <p>The Hearing Panel refers the submitter to Policies 20 [Coastal hazards], 21 [Natural hazard defences] and Implementation Methods 37 to 42, which specifically address matters set out in Policy 24, Policy 25, Policy 26, and Policy 27 of the <i>New Zealand Coastal Policy Statement</i>. Other Plan provisions may also apply.</p> <p>The Hearing Panel recommends amending Objective 13 (in line with reliefs sought by other submitters) to read as follows:</p> <p><i>The risk of social, cultural, environmental, and economic harm <u>in the coastal environment</u> from coastal hazards is not increased and public health, safety and property is not compromised by use and development of the coastal marine area.</i></p>
Further submissions – Port Taranaki Ltd (32)		Oppose	
	175	Amend	Decline

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd		Submitter seeks amendment to Objective 13 of the Plan to read: <i>The risk of social, cultural, environmental, and economic harm from coastal hazards is not increased to unacceptable levels and public health, safety and property is not compromised by use and development of the coastal marine area.</i>	The Hearing Panel recommends declining the relief sought by the submitter. An objective should clearly identify the resource management outcome sought and it is unusual for an objective to allow any increase in environmental risk. The Hearing Panel is also concerned that reference to “unacceptable level” infers that some increase is allowed, which is contrary to Policy 25(a) of the <i>New Zealand Coastal Policy Statement</i> , which refers to “avoid increasing the risk of social, environmental and economic harm from coastal hazards”.

48 – Taranaki District Health Board	176	Support	Accept
		Retain Objective 13 of the Plan as notified	Support noted. Objective 13 is retained subject to minor amendments as requested by other submitters.
Objectives 1 – 14			
41 – Te Korowai o Ngāruahine Trust	177	Amend	Decline
		Submitter seeks amendment to objectives section of the Plan to include commentary from the Section 32 Evaluation Report to explain the focus and intent of Plan objectives.	<p>The Council has deliberately chosen to make its Plan concise and focus its content matters on the mandatory content matters set out in Section 67 of the RMA to guide the setting of rules and consenting processes. As such, it contains very little or minimal optional content such as issues, explanations, and methods (other than rules).</p> <p>Notwithstanding that, the Hearing Panel appreciates the submitter's comments on the usefulness of the explanation of Plan provisions provided in the Section 32 Explanation Report and recommends that Council finalise that report with the intention that it be a companion document to the Plan to assist readers in the interpretation and application of Plan provisions. The Hearing Panel further recommend that Council investigate the preparation of practice notes based on the Section 32 Evaluation Report to explain the intent of Plan provisions once adopted.</p>

4.4 Policies

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Section 5 – Preamble			
43 – Royal Forest and Bird Protection Society	178	Support	Decline
		<p>Submitter seeks amendment to the introduction of Section 5 of the Plan, on page 19, to read:</p> <p><i>Section 5.1 contains [...] which relate to:</i></p> <p>1. [...]</p> <p><i>1A. protection of significant and outstanding values and characteristics of the coastal environment [...]</i></p>	<p>The Hearing Panel notes that the bullet points relate to the third order headings adopted for the Policies section of the Plan for the reader's ease of reference. The headings bundle similar policies by shared themes. Policies relating to the protection of significant and outstanding values and characteristics of the coastal environment are already addressed under the heading of "Natural form and functioning".</p>
43 – Royal Forest and Bird Protection Society	179	Amend	Accept in part
		<p>Submitter seeks amendment to the introduction of Section 5.1 of the Plan, on page 20, to read:</p> <p><i>This section provides the overall direction for achieving integrated management for the protection of significant and outstanding values and matters in the coastal environment (i.e. both the coastal marine area and areas landward where coastal processes, influences or qualities are significant) in order to achieve the objectives of this Plan.</i></p> <p><i>The policies apply to all activities in the coastal environment, regardless of which coastal management area the activity may fall within (coastal management areas are identified in Schedule 1 and their characteristics are described in Policy 1).</i></p>	<p>The Hearing Panel recommends amending the introduction of Section 5.1 but notes that the Plan policies cover use, development and protection of all coastal values not just "the protection of significant and outstanding values." The Hearing Panel therefore recommends an alternative relief that takes into account reliefs sought in other submissions. The amended introduction would read as follows:</p> <p><i>This section provides the overall direction for achieving integrated management in the coastal environment (i.e. both the coastal marine area and areas landward where coastal processes, influences or qualities are significant and as indicatively shown on the planning maps) in order to achieve the objectives of this Plan.</i></p> <p><i>The policies apply to all activities in the coastal environment. The policies set out a coastal management framework, provide for use and development, protect, maintain and enhance significant and outstanding values, and manage coastal hazards and risks to public health and safety.</i></p>

Policy 1 – Coastal management areas			
5 – Point Board Riders	184	Support Submitter supports the inclusion of Policy 1(d)(iii) of the Plan. Retain as notified.	Accept Support noted. Policy 1(d)(iii) is retained as notified.
6 – Trans-Tasman Resources Ltd	185	Support Submitter supports Policy 1(d)(i) of the Plan acknowledging the existing high energy wave environment and current coastal erosion in the open coast.	Accept Support noted. Policy 1(d)(i) is retained as notified.
15 – Surfbreak Protection Society	186	Support Submitter supports the inclusion of Policy 1 (d)(iii) of the Plan. Retain as notified.	Accept Support noted. Policy 1(d)(iii) is retained as notified.
20 – Meridian Energy Limited	187	Amend Submitter seeks amendment to the first paragraph of Policy 1 of the Plan to read: <i>Manage the coastal marine area environment in a way that recognises that some areas have values, characteristics or uses that are vulnerable or sensitive to the effects of some activities, or that have different management needs than other areas [...]</i>	Accept Policy 1 has two parts. The first part, to which the relief applies to the whole coastal environment and recognises that some areas have different values, characteristics, uses, vulnerabilities, sensitivities or management needs to other areas. The second part relates to the coastal management areas, which are of relevance to the rules in and relate to the coastal marine area only. The Hearing Panel recommends granting the relief sought by the submitter as the concept of some areas having different values, characteristics, uses, vulnerabilities, sensitivities or management needs to other areas applies to the wider coastal environment and not just the coastal marine area. However, the second part of the Policy clearly relates to identifying the five coastal management areas to which rules

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>will specifically apply. The Hearing Panel further recommends other consequential amendments to Policy 1 to clarify that the coastal management areas apply only to the coastal marine area.</p> <p>The proposed amendments would read as follows:</p> <p><i>Manage the coastal environment in a way that recognises that some areas have values, characteristics or uses that are more vulnerable or sensitive to the effects of some activities, or that have different management needs than other areas.</i></p> <p><i>In managing the use, development and protection of resources in the coastal marine area under the Plan, recognition will be given to the following coastal management areas (identified in Schedule 1) and their distinguishing values, characteristics and uses: [...]</i></p>
23 – New Plymouth District Council	188	Support	Accept
		Retain Policy 1 of the Plan as notified.	Policy 1 is retained subject to minor amendments as requested by other submitters.
26 – Transpower NZ Ltd	189	Support	Accept
		Retain Policy 1 of the Plan as notified.	Policy 1 is retained subject to minor amendments as requested by other submitters.
28 – Grant Knuckey	190	Amend	Decline
		Submitter seeks amendment to Policy 1 of the Plan by incorporating mana whenua values from Policy 16 [Relationship of tangata whenua] into Policy 1.	The Hearing Panel notes the introductory sentence to Section 5 of the Plan on page 19 that “... when assessing an activity, all relevant general and activity-based policies are to be considered and no individual policy viewed in isolation. ” It is therefore unnecessary to cross reference Policy 16 (and other policies) in Policy 1 for it to be considered. Both Policy 1 and 16 will be considered together (plus the other General Policies and relevant Activity-specific Policies) in the assessment of any resource consent applications.
28 – Grant Knuckey	191	Amend	Decline
		Submitter seeks amendment to Policy 1 of the Plan by identifying two new marine spatial coastal management areas – wahi tapu areas and wahi taonga areas.	The Hearing Panel recommends declining the relief sought in that the relief is unnecessary and has already been given effect to in the Plan, albeit in a different manner than that sought by the submitter.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	Policy 1 sets out a zonal approach for the application of rules in the coastal marine area. The coastal marine area has been divided into five coastal management areas

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>based upon shared values, characteristics, uses, vulnerability or sensitivity, and different management needs. The zones allow rules to 'bundle' compatible activities or effects of these activities together and restrict activities or effects which are incompatible. The coastal management areas enables some activities, and restricts other activities.</p> <p>The Hearing Panel notes that Policy 1 is based upon the current coastal management regime, which included similar coastal management areas and has largely been effective in managing adverse effects in the coastal marine area.</p> <p>Notwithstanding the above, across all the coastal management areas and at a finer spatial scale, there will be specific sites and places with regionally significant values located within the coastal management area. They include sites, places and attributes identified as significant for their natural character, indigenous biodiversity, historic heritage and amenity values. Through this Coastal Plan review considerable effort has been made to identify and/or map sites of significance to tangata whenua in Schedule 5B of the Plan and associated planning maps. These sites include wahi tapu areas and wahi taonga areas to ensure that any adverse effects on these sites and places are properly considered and adverse effects avoided, remedied or mitigated. The Hearing Panel notes that supporting policies and rules in the Plan apply relating to the protection of wahi tapu, wahi taonga and other significant sites of significance to Māori.</p>
29 – Department of Conservation	192	<p>Amend</p> <p>Submitter seeks amendment to Policy 1(d) [Open Coast] of the Plan to include a new characteristic to read:</p> <p><i>v) provide important habitats for marine species.</i></p>	<p>Grant in kind</p> <p>The submitter refers to the Section 32 Evaluation Report which recognizes that within the open coast there is a range of marine habitats that none of the other management areas have.</p>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	<p>The Hearing Panel recommends granting the relief sought in kind by amending Policy 1(d)(ii) to refer to marine systems (which encompass, amongst other things, reef systems that provide habitats for marine life), and migration paths, breeding areas and nursery areas for marine mammals and seabirds. The Hearing Panel further recommends that, as a consequential amendment, Policy 1(d)(ii) is split into two clauses and that the values of mahinga kai are identified separately.</p> <p>The revised Policy 1(d) would read as follows:</p> <p>[...]</p> <p>(ii) include marine systems <i>and</i> habitat, <i>including migratory paths, breeding areas for marine mammals and seabirds;</i></p>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>(iiA) include marine systems and marine life valued by Māori for mahinga kai; [...]</i>
32 – Port Taranaki	193	Amend Submitter generally supports Policy 1 but questions the relevance or significance of Clause (e)(v) and recommends deleting it: <i>(v) can have significant effects on areas outside of the Port, including contributing to coastal erosion along the New Plymouth foreshore</i>	Accept The Hearing Panel agrees that activities able to have significant effects outside the area of operation and able to have an impact on coastal erosion are not confined to the Port and recommend deleting the clause.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Oppose	
40 – Te Rūnanga o Ngāti Mutunga	194	Amend Submitter seeks amendment to Policy 1(b) and (c) of the Plan to re-instate (from the Draft Coastal Plan) the following characteristics for Estuaries Unmodified and Estuaries Modified: <i>[...] valued by Māori for Mahinga Kai.</i>	Accept The Hearing Panel recommends amending Policy 1(b) and (c) as through the exercise of mapping sites of significance to Māori, inevitably estuaries have been identified as important for a variety of reasons including mahinga kai. However, the Hearing Panel recommends broadening the relief to 'capture' not just mahinga kai values but other potential cultural, spiritual, historical and traditional associations. The amended Policy 1(b) and (c) will include a clause that will read as follows: <i>[...] are valued by Māori for taonga species, and cultural, spiritual, historical and traditional associations.</i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	195	Amend Submitter seeks amendment of Policy 1 of the Plan to recognise the place of marine spatial planning and ecosystem based management and other associated environmental and kaitiaki plans and recognise Māori values within each of the coastal management areas.	No relief necessary No precise details of amendments sought to Policy 1 have been provided but the Hearing Panel believes that Plan provisions, when read as a whole, give effect to the relief sought by the submitter and no further change is necessary. Policy 1 already includes an element of marine spatial planning. It sets out a zonal approach for the application of rules in the coastal marine area. The coastal marine area has been divided into five coastal management areas based upon shared values, characteristics, uses, vulnerability or sensitivity, and different management needs. The zones allow rules to 'bundle' compatible activities or effects of these activities together and restrict activities or effects which are incompatible. The coastal management areas enables some activities, and restricts other activities. Notwithstanding the above, across all the coastal management areas and at a finer spatial scale, there will be specific sites and places with regionally significant values. Through this Coastal Plan review considerable effort has been made to identify and/or map these values in the Plan schedules and associated planning maps, which
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			include wahi tapu areas and wahi taonga areas to ensure that any adverse effects on these sites and places are properly considered and adverse effects avoided, remedied or mitigated.
43 – Royal Forest and Bird Protection Society	196	Other	No relief necessary
		Submitter seeks discussion around Policy 1 to determine whether the characteristics listed under Outstanding Value, Estuaries Unmodified, Estuaries Modified, Open Coast and Port require all characteristics to apply together as indicated by the use of “and” within the listings.	Comments noted. The Hearing Panel notes that the matters listed are but a general description of distinguishing values, characteristics and uses that underpin the identification of the five very broad coastal management areas. The Hearing Panel has been advised that Council officers have discussed this matter further with the submitter as part of the pre-hearing engagement process. It was noted that all these characteristics <u>broadly</u> apply in the specified coastal management area but it is not necessary for all these characteristics to apply in every locality within the coastal management area
Further submissions – Port Taranaki Ltd (32)		Support in part	
43 – Royal Forest and Bird Protection Society	197	Other	No relief necessary
		Submitter questions whether the current wording of Policy 1 of the Plan, and its subheadings, account for the protection of biodiversity and associated values or merely define large management areas, which then have their values protected or uses provided through other policies. If this is the case it is unclear where these protective provisions are.	No relief is sought. However, as previously noted, Policy 1 is a general description of distinguishing values, characteristics and uses that underpin the identification of the five coastal management areas. In relation to the “protective provisions” the Hearing Panel refers the submitter to the rest of the Plan. The Hearing Panel notes the introductory sentence to Section 5 on page 19 that “... when assessing an activity, regard will be had to all relevant general and activity-based policies are to be considered and no individual policy viewed in isolation. ”
Further submissions – Port Taranaki Ltd (32)		Support in part	The Hearing Panel believes the ‘suite’ of General Policies plus relevant Activity Policies triggered by use and development activities in the coastal marine area address, amongst other things, the use and development and protection of natural and physical coastal resources.
43 – Royal Forest and Bird Protection Society	198	Amend	Accept in part
		Submitter seeks amendment to the Plan by deleting Policy 1 of the Plan OR Amend Policy 1 by: <ul style="list-style-type: none"> setting out an area based management approach based on mapped and scheduled areas. Refer to relevant policies to identify characteristics in those areas which are not already for those areas in 	The Hearing Panel recommends amendments to Policy 1 that give partial effect to the relief sought by the submitter but which also addresses issues/matters raised by other submitters. The submitter's concerns with the coastal management area approach are noted. However, the Hearing Panel notes that the approach has been in place since 1997 and to date no issues have been identified in relation to its application. The current

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>a schedule AND move the amended policy to section 5.2 so that it clearly sets out a management approach only within the coastal marine area and applies only to the activities which are controlled under rules in the plan</p> <ul style="list-style-type: none"> amending the description of the management approach as per the submitter's suggestions relating to Section 1.7 above and Policies 1(a), (b), (c), (d) and (e) below including a statement that explains that Policy 1 does not provide direction for subdivision, use or development activities within the management areas. 	<p>Coastal Plan, which includes the same zonal approach and has an equivalent policy, has been demonstrated to be efficient and effective in managing adverse effects in the coastal marine area through interim reviews and state of the environment monitoring. The Hearing Panel therefore does not believe it necessary nor appropriate to delete Policy 1.</p> <p>Notwithstanding the above, the Hearing Panel notes recommendations that give partial relief to other reliefs sought by the submitter. These include amendments to the Policy 1 plus other inconsequential changes in Section 1.7 of the Plan to clarify that the application of the coastal management areas (i.e. spatial extent) applies only to the coastal marine area.</p>

43 – Royal Forest and Bird Protection Society	199	<p>Amend</p> <p>Submitter seeks amendment to Policy 1(a) of the Plan to read:</p> <p><i>In managing the use, development and protection of resources under the Plan, recognition will be given to the following coastal management areas (identified in Schedule 1) and their distinguishing values, characteristics and uses:</i></p> <p>(a) Outstanding Value: Coastal areas of outstanding value (identified in Schedule 2) that characteristically:</p> <p>(i) are areas of outstanding natural character and/or outstanding natural features or landscapes;</p> <p>(ii) contain values and attributes that are exceptional, including in relation to landforms, land cover, biodiversity, cultural and heritage associations, and visual qualities identified in Schedule 2 (refer corresponding Policy 7);</p> <p>(iii) contain marine areas with legal protection, including Parininihi Marine Reserve, Ngā Motu/Sugar Loaf Islands Marine Protected Area and Tapuae Marine Reserve (identified in Schedule 1); and</p> <p>(iv) are iconic to the region's identity and sense of place. These coastal management areas represent those areas that have been identified to meet the criteria under Policy 8: Outstanding Natural Character and Policy 9: Outstanding</p>	<p>Accept in part</p> <p>The Hearing Panel does not consider it is appropriate or necessary to paraphrase and reference the <i>New Zealand Coastal Policy Statement</i> or other policies in the Plan.</p> <p>The Hearing Panel also does not consider it necessary to amend Policy 1(a) to delete references to the distinguishing values, characteristics and uses set out in Clauses (ii), (iii) and (iv). The Hearing Panel notes that Policy 1(a) is similar to an equivalent policy in the current Plan for which no issues have been identified in relation to its interpretation and application. The Hearing Panel notes requests by other submitters seeking to have additional values identified.</p> <p>Notwithstanding the above, the Hearing Panel recommends granting relief in part. The Hearing Panel recommends amendments to Policy 1(a) based upon the relief sought by the submitter (and others) that reads as follows:</p> <p>(a) Outstanding Value: <u>refers to those areas listed in Schedule 1(a) and are identified as having outstanding natural character and/or outstanding natural features or landscapes values. These areas</u> characteristically:</p> <p>(i) contain values and attributes that are exceptional [...]</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>Natural Features and Landscapes. They are listed in Schedule 1(a) and shown on the Planning maps. The values and characteristics of these identified areas are set out in Schedule 2.</u>	
Further submissions – Port Taranaki (32)		Oppose	
43 – Royal Forest and Bird Protection Society	200	Amend Submitter seeks amendment to Policy 1(a) of the Plan to include specific provisions for marine reserves and protected marine areas under relevant policies.	Decline The Hearing Panel does not consider it is necessary in Taranaki to include specific provisions for marine reserves and protected marine areas. In Taranaki, all marine reserves already have a high level of protection via the Plan as they have been identified an assessed as Outstanding Value coastal management areas and as 'significant indigenous biodiversity'. Separate stand-alone policies would be unnecessary and redundant. The Hearing Panel further highlights that constraints on use and development also apply under other legislation, including the <i>Marine Reserves Act 1971</i> and the <i>Fisheries Act 1996</i> .
Further submissions – Port Taranaki (32)		Oppose	
43 – Royal Forest and Bird Protection Society	201	Amend Submitter seeks amendment to Policy 1(b) of the Plan to read: <i>In managing the use, development and protection of resources under the Plan, recognition will be given to the following coastal management areas (identified in Schedule 1) and their distinguishing values, characteristics and uses:</i> [...] (b) Estuaries Unmodified: Estuaries, not identified in (a) or (c) of this policy, that are permanently open to tidal movements and characteristically: (i) provide a natural focal point for human activity but are generally not significantly modified and are surrounded by minimal urban development and unmodified environments; (ii) have significantly different and more complex natural processes than the open coast; and (iii) provide important habitats, migration paths, breeding areas and nursery areas for marine and bird life. <u>These coastal management areas are those estuaries that are permanently open to tidal movements. These areas do not include estuaries identified as</u>	Accept in part The Hearing Panel does not believe it is appropriate or necessary to paraphrase and reference the <i>New Zealand Coastal Policy Statement</i> or other policies in the Plan. The Hearing Panel also does not believe it necessary to amend Policy 1(b) to delete references to the distinguishing values, characteristics and uses set out in Clauses (i), (ii) and (iii). The Hearing Panel notes that Policy 1(b) is similar to an equivalent policy in the current Plan for which no issues have been identified in relation to its interpretation and application. The Hearing Panel further notes requests by other submitters seeking to have additional values identified in this Policy. Notwithstanding the above, the Hearing Panel recommends amendments to Policy 1(b) that partially give effect to the changes sought by the submitter that reads as follows: (b) Estuaries Unmodified: <u>refers to those</u> estuaries that are permanently open to tidal movements <u>and listed in Schedule 1(b). These areas do not include estuaries identified in (a) or (c) of this policy</u> and characteristically: (i) <u>have high natural character.</u> [...]

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>Outstanding value areas. They are listed in schedule 1(b) and shown on the Planning maps. In determining the values and characteristic in these estuaries have particular regard to Policy 14 Indigenous Biodiversity, Policy X High natural character, Policy X other natural character, Policy X other natural features.</u>

43 – Royal Forest and Bird Protection Society	205	<p>Amend</p> <p>Submitter seeks amendment to the Plan to include a new Policy specific to the Port of Taranaki and consistent with Policy 9 [Port] of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Decline</p> <p>The Hearing Panel do not believe it is appropriate or necessary to include a new policy specific to the Port to give effect to Policy 9 of the <i>New Zealand Coastal Policy Statement</i>.</p>
Further submissions– Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	<p>The Hearing Panel notes the introductory sentence to Section 5 on page 19 that “...when assessing an activity, regard will be had to all relevant general and activity-based policies are to be considered and no individual policy viewed in isolation.” It is therefore unnecessary to include a new policy specific to the Port when matters outlined in Policy 9 of the <i>New Zealand Coastal Policy Statement</i> have been more fully covered and addressed via Policy 1 [Coastal management areas], Policy 5 [Use and development], Policy 6 [Regionally important infrastructure] and Policy 7 [Reverse sensitivity]. These and the other General Policies and relevant Activity Policies will contribute to the efficient and safe operation of Port Taranaki.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
45 – Powerco	206	Amend Submitter supports Policy 1 of the Plan subject to an amendment that recognises the existence of existing infrastructure in areas of Outstanding Value, Estuaries Unmodified and Estuaries Modified, unless the mapping is amended such that this is not the case. Seek amendment to policies 1(a), 1(b) and 1(c) to read: <u>these areas may contain regionally important infrastructure.</u>	Decline The Hearing Panel recommends declining the relief sought by the submitter in that the suggested amendments are for a value or attribute that is not a distinguishing feature of the coastal management area (i.e. regionally important infrastructure could be located anywhere in Taranaki). Policy 1 sets out a zonal approach for the application of rules in the coastal marine area. The coastal marine area has been divided into five broad coastal management areas based upon shared values, characteristics, uses, vulnerability or sensitivity, and different management needs. The zones allow rules to 'bundle' compatible activities or effects of these activities together and restrict activities or effects which are incompatible. The coastal management areas enable some activities, and restrict other activities. As noted in Policy 1(a), (b) and (c) the listed matters refer to attributes and values characteristic of the area. There is no value in identifying values and attributes (already recognised and provided for by policies elsewhere) and which can occur anywhere in the coastal marine area.

58 – Te Atiawa	209	Amend Submitter seeks amendment to Policy 1(b) and (c) of the Plan to re-instate (from the Draft Coastal Plan) the following characteristics for Estuaries Unmodified and Estuaries Modified: [...] <i>valued by Māori for Mahinga Kai.</i>	Accept The Hearing Panel agrees to amend Policy 1(b) and (c) as through the exercise of mapping sites of significance to Māori, inevitably estuaries have been identified as important for a variety of reasons, including mahinga kai. The Hearing Panel recommends granting the relief, alongside other potential cultural, spiritual, historical and traditional associations to include an additional clause that will read as follows: [...] <i>are valued by Māori for taonga species, and cultural, spiritual, historical and traditional associations.</i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
59 – KiwiRail	210	Support Retain Policy 1 of the Plan as notified.	Accept Policy 1 is retained subject to minor amendments as requested by other submitters that does not change the policy intent.
61 – Te Rūnanga o Ngāti Ruanui Trust	211	Amend Submitter seeks amendment to Policy 1(a) of the Plan (and associated schedules) to include: <ul style="list-style-type: none"> • Tangahoe – Hawera – Manutahi Reef system • Patea Beach and the Patea River Estuary 	Decline Policy 1(a) identifies coastal management areas of outstanding (exceptional) natural character and/or outstanding natural features and landscapes across the Taranaki region. Outstanding Value coastal management areas were based upon the current Coastal Plan. However, through the Coastal Plan review additional investigations

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> Ohawe – Manawapou – Waihi Beaches. 	<p>were carried out, which resulted in a few additional sites being identified. However, that assessment did not identify the aforementioned areas as being exceptional for their natural character and/or for their natural features and landscapes. This finding is consistent with South Taranaki District Council conclusions as encapsulated in their Proposed District Plan.</p> <p>The Hearing Panel notes that the submitter has not introduced any new information in support of these sites being outstanding natural character, features or landscapes.</p> <p>Notwithstanding the above, the Hearing Panel suggests granting the relief may not be necessary as the Plan already recognises the aforementioned sites as being 'regionally significant' for a variety of reasons, including for the cultural and historical heritage values. The Tangahoe - Hawera – Manutahi reef system is identified in Schedule 3, the Patea Beach and the Patea River Estuary are identified in Schedule 5B, while the Ohawe – Manawapou – Waihi beaches are identified in Schedule 6. The aforementioned places are also identified in Appendix 2 [Statutory acknowledgement] of the Plan (and associated planning maps).</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	212	Amend	Accept in part
		<p>Submitter seeks amendment to Policy 1(b) of the Plan (and associated schedules) to include:</p> <ul style="list-style-type: none"> Hauroto Stream Waihi Stream Katewheta Stream Waikaikai Stream Mangaroa Stream Kaikura Stream Whenuakura River Manawapou River. 	<p>The Hearing Panel recommends granting the relief in part.</p> <p>Policy 1(b) identifies larger estuaries based upon those identified in the current Plan. They are generally described as having high/unmodified natural character unmodified.</p> <p>With the exception of the Whenuakura River, which is already identified as an Estuary Unmodified, the streams identified by the submitter are relatively small and for spatial mapping and coastal management purposes there is little to differentiate these streams from other streams recognising that, when mapping the stream mouths, the RMA definition of the coastal marine area, where the line crosses these rivers, is "...the point upstream that is calculated by multiplying the width of the river mouth by 5."</p> <p>Notwithstanding the above, of note the aforementioned stream mouths are recognised and have been mapped at a finer spatial scale to recognise that they are regionally significant for their cultural and historic heritage (and other) values. The aforementioned places are identified in Schedule 5B and Appendix 2 [Statutory acknowledgement] of the Plan (and associated planning maps).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	213	Amend Submitter seeks amendment to Policy 1(b), (c) and (d) of the Plan to include the following characteristics for coastal management areas Estuaries Unmodified, Estuaries Modified and Open Coast: <u>[...] provide for taonga species, cultural and traditional associations and cultural heritage.</u>	Accept in part The Hearing Panel agrees to amend Policy 1(b) and (c) as through the exercise of mapping sites of significance to Māori, inevitably estuaries have been identified as important for a variety of reasons. The Hearing Panel recommends granting the relief, alongside other potential cultural, spiritual, historical and traditional associations: <u>[...] are valued by Māori for mahinga kai, taonga species, cultural, spiritual, historical and traditional associations.</u>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	However, the Hearing Panel recommends Policy 1(d) is retained as currently notified. The Hearing Panel note that Policy 1(d)(ii) and (iv) already contain a cultural component and therefore no changes to that part of the policy are considered necessary.
NEW Policy 1A – Coastal management areas (Port)			
43 – Royal Forest and Bird Protection Society	214	Amend Submitter seeks amendment to the Plan to include a new Policy specific to the Port of Taranaki and consistent with Policy 9 [Port] of the <i>New Zealand Coastal Policy Statement</i> .	Decline The Hearing Panel does not believe it is appropriate or necessary to include a new policy specific to the Port to give effect to Policy 9 of the <i>New Zealand Coastal Policy Statement</i> .
Further submissions – Port Taranaki Ltd (32)		Oppose	The Hearing Panel notes the introductory sentence to Section 5 on page 19 that “... when assessing an activity, regard will be had to all relevant general and activity-based policies are to be considered and no individual policy viewed in isolation. ” It is therefore unnecessary to include a new policy specific to the Port when matters outlined in Policy 9 of the <i>New Zealand Coastal Policy Statement</i> have been more fully covered and addressed via Policy 1 [Coastal management areas], Policy 5 [Use and development], Policy 6 [Regionally important infrastructure] and Policy 7 [Reverse sensitivity]. These and the other General Policies and relevant Activity-specific Policies will contribute to the efficient and safe operation of Port Taranaki.
Policy 2 – Integrated management			
2 – Federated Farmers	215	Support Submitter notes support of Policy 2 of the Plan as notified	Accept Support noted. Policy 2 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
7 – Waikato Regional Council	216	Other Submitter seeks that the Council consider, in its Coastal Plan, provisions related to integrated management, cross-boundary issues and the need to work collaboratively with the Waikato Regional Council, which may include incorporating a new section with cross boundary related provisions, or expanding Policy 2 to more explicitly state how cross-boundary matters will be managed through collaboration.	No relief necessary Submitter's comments are noted. The Hearing Panel notes that as part of the development of the Proposed Coastal Plan the Council considered all matters relating to the structure, format and content of a revised Plan including a stand-alone section setting out integrated management/cross boundary provisions and determined on the approach as adopted in the proposal, which includes a stand-alone Policy but also includes other Plan provisions that contribute to more effective integrated management including Plan objectives, General Policies and Implementation Methods that apply across the coastal environment.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
7 – Waikato Regional Council	217	Other Notes the Waikato Regional Council will be working collaboratively with other agencies on a long-term strategy on coastal erosion and flooding for the Mokau area.	No relief necessary Comments noted.
Further submissions – Te Atiawa (58)		Support	
12 – Chorus New Zealand Limited	218	Support Retain Policy 2 of the Plan as notified.	Accept Support noted. Policy 2 is retained subject to amendments sought by other submitters.
13 – Spark New Zealand Trading Limited	219	Support Retain Policy 2 of the Plan as notified.	Accept Support noted. Policy 2 is retained subject to amendments sought by other submitters.
Further submissions – Port Taranaki Ltd (32)		Support	
14 – Vodafone New Zealand Limited	220	Support Retain Policy 2 of the Plan as notified.	Accept Support noted. Policy 2 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
19 – South Taranaki District Council	221	Amend Submitter notes support for this policy but requests amendment to Policy 2(e) and (g) of the Plan to add reference to working cooperatively with the territorial local authorities of the region and iwi.	No relief necessary In relation to amending Policy 2(e) and (g) to add reference to working cooperatively with the territorial local authorities of the region and iwi, the Hearing Panel note that clause (g) already references this and no further amendments are considered necessary except to correct the Policy reference in (g) to refer to Policy 16 [Relationship of tangata whenua].
19 – South Taranaki District Council	222	Amend Submitter seeks amendment to Policy 2(g) of the Plan noting that reference to Policy 15 is in error and should be corrected to Policy 16.	Accept The Hearing Panel recommends granting the relief sought.
20 – Meridian Energy Limited	223	Amend Submitter seeks minor amendments to Policy 2(b) and (e) of the Plan to clarify that they apply only to the Taranaki region: <i>Provide for the integrated management of the coastal environment by:</i> [...] <i>(b) implementing policies, methods and rules in other regional plans <u>for Taranaki</u> in relation to managing adverse effects associated with diffuse and direct discharges to freshwater and air, and soil disturbance;</i> [...] <i>(e) considering the effects of activities in the coastal marine area on outstanding natural features and landscapes or areas of outstanding natural character identified in other regional or district plans <u>for the Taranaki Region</u>.</i>	Accept The Hearing Panel recommends amending Policy 2 to clarify in clauses 2(b) and (e) that the Taranaki region is the area being managed.
Further submissions – Te Atiawa (58)		Oppose	
20 – Meridian Energy Limited	224	Amend Amend Clause (c) of Policy 2 of the Plan to clarify what is meant by “cross-media effects”.	Accept Cross-media effects refer to effects that may traverse environmental domains, e.g. activities that occur on land such as a discharge that have an impact on water quality. The Hearing Panel recommends amending Policy 2 to clarify the concept of cross-media effects by deleting clause (c) and inserting a new clause (aa) that reads as follows:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>(aa) recognising ki uta ki tai by taking into account the interconnected nature of resources and natural processes in the management of adverse effects across air, land, fresh water bodies and the coastal environment; [...]</i>
21 – Climate Justice Taranaki	225	Amend Submitter notes support for this policy but suggests amendment to Policy 2(g) of the Plan to add reference to working cooperatively with government departments and authorities (e.g. Environmental Protection Authority) to avoid, mitigate and manage any potential impacts from activities proposed/conducted in the Exclusive Economic Zone (e.g. seabed and petroleum mining), on Taranaki's coastal environment.	No relief necessary Support noted. In relation to amending Policy 2(g) to add reference to working cooperatively with the government departments and authorities, the Hearing Panel notes that clause (g) already references this and further amendment to specify which departments under what scenarios is not considered necessary.
26 – Transpower NZ Ltd	226	Amend Submitter seeks amendment to Policy 2(f) of the Plan to read: <i>Provide for the integrated management of the coastal environment by: [...]</i> <i>(f) managing natural and physical coastal resources in a manner that <u>recognises and provides for</u> has regard to the social, economic and cultural objectives and well-being of the community, and the functional, <u>technical, operational</u> and/or locational constraints of nationally or regionally important infrastructure [...]</i>	Accept The submitter requests this policy is amended to provide a stronger directive approach. The submitter suggests that the amendment would give better effect to Policy 1 and Policy 3 of the <i>National Policy Statement for Electricity Transmission</i> . The Hearing Panel recommends granting the relief sought by the submitter with minor word changes to maintain consistent wording with other areas of the Plan. The amended Policy 2(f) would read as follows: [...] <i>(f) managing natural and physical resources in a manner that <u>recognises and provides for</u> the social, economic and cultural objectives and well-being of the community and the functional <u>needs and/or operational needs</u> of regionally important infrastructure <u>and industry</u>; and [...]</i>
29 – Department of Conservation	227	Amend Submitter seeks amendment to Policy 2(c) of the Plan to clarify how taking into account the potential for cross media effects and the connections between freshwater bodies and coastal water will provide for integrated management.	Accept in part The submitter suggests that Policy 2(c) is unclear and would like to know how Clause (c) of Policy 2 will provide for integrated management of the coastal area. Integrated management, for the purposes of the Plan, means managing use, development and protection of natural and physical resources as a whole. It recognises that natural and physical resources exist as parts of complex and interconnected social and biophysical systems, where effects on one part of the system may affect other parts of the system. Integrated management also recognises that the management of systems involves a number of agencies with different roles and

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>responsibilities. Clause (c) – management of cross-media effects – is therefore an essential part of integrated coastal management.</p> <p>Cross-media effects refer to effects that may traverse environmental domains, e.g. activities that occur on land such as a discharge that have an impact on water quality. In the case of the coastal marine area, activities inside the coastal marine area may have an adverse effect on the wider coastal environment, or vice versa. Therefore, such effects need to be recognised and taken into account when implementing the Plan.</p> <p>No precise details of amendments sought to Policy 2(a) have been provided. However, the Hearing Panel recommends, in response to this and other submissions, amending Policy 2 to clarify the concept of cross-media effects by deleting clause (c) and inserting a new clause (aa) that reads as follows:</p> <p><i><u>(aa) recognising ki uta ki tai by taking into account the interconnected nature of resources and natural processes in the management of adverse effects across air, land, fresh water bodies and the coastal environment: [...]</u></i></p>
35 – Radio New Zealand Ltd	228	Support	Accept
		Retain Policy 2 of the Plan as notified	Support noted. Policy 2 is retained subject to amendments sought by other submitters.
40 – Te Rūnanga o Ngāti Mutunga	229	Support	Accept
		<p>Submitter seeks amendment to Policy 2(a) of the Plan to read:</p> <p><i>Provide for the integrated management of the coastal environment by: [...]</i></p> <p><i>(a) implementing policies under section 5.1 of the Plan in managing the effects of activities (positive and negative adverse) undertaken in the coastal marine area on significant values and characteristics of the wider coastal environment [...]</i></p>	The Hearing Panel recommends granting the relief sought. The Hearing Panel agrees that the use of “adverse” provide a clearer meaning of Policy 2 and makes it consistent with wording elsewhere in the Proposed Plan and the RMA.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
43 – Royal Forest and Bird Protection Society	230	Amend	Decline
		Submitter suggests that the current wording of Policy 2 of the Plan does not give effect to Policy 4 [Integration] and Policy 5 [Land or waters managed of held under other acts] of the <i>New Zealand Coastal Policy Statement</i> and is not consistent with the purpose of the RMA set out in Section 5.	No precise details of amendments sought to Policy 2 have been provided but the Hearing Panel believes that Plan provisions, when read as a whole, give effect to the relief sought by the submitter and no further change is necessary.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>The Hearing Panel notes that there is no <i>New Zealand Coastal Policy Statement</i> requirement for a single agency, and/or a single planning document, to give effect to all its policies. The Proposed Coastal Plan is one of a number of planning instruments necessary to give effect to the <i>New Zealand Coastal Policy Statement</i>. Other agencies and other planning instruments also have a role to play.</p> <p>The Hearing Panel further notes the introductory sentence to Section 5 on page 19 that “...when assessing an activity, regard will be had to all relevant general and activity-based policies are to be considered and no individual policy viewed in isolation.” The Hearing Panel believes the ‘suite’ of General Policies plus relevant Activity Policies triggered by use and development activities in the coastal marine area address, amongst other things, the matters set out in Policy 4 [Integration] and Policy 5 [Land or waters managed or held under other acts] of the <i>New Zealand Coastal Policy Statement</i> and is consistent with the purpose of the RMA as set out in Section 5 of the Act.</p>
43 – Royal Forest and Bird Protection Society	231	<p>Amend</p> <p>Submitter seeks amendment to Policy 2(a) of the Plan to read: <i>Provide for the integrated management of the coastal environment by:</i> <i>(a) implementing policies under section 5.1 of the Plan in managing the <u>location, form and limits</u> effects of activities (positive and negative) undertaken in the coastal marine area <u>to protect and preserve the indigenous biodiversity, natural character, natural feature and landscape</u> on significant values and characteristics of the wider coastal environment; [...]</i></p>	<p>Accept in part</p> <p>Aspects of the relief sought to Policy 2(a) seem to be district plan oriented and unnecessary confines the scope of the Policy to the protection and preservation of indigenous biodiversity, natural character, and natural feature and landscapes. Other matters addressed within Section 5.1 [General Policies] of the Plan are excluded. The relief sought further confines the scope of the Policy to focus only on the “protection” of specific natural and physical resources to the exclusion of recognising and providing for use and development.</p>
Further submissions – Radio New Zealand (35)		<p>Oppose</p>	<p>The Hearing Panel notes that the matters/values that the submitter wishes to protect are adequately provided for in other Policies within the Plan, for example Policy 9 [Natural character and natural features and landscapes] and Policy 14 [Indigenous Biodiversity]. The Hearing Panel encourages users to read the Policies section as a whole, as intended, and recognise that all policies apply.</p> <p>Notwithstanding the above, the Hearing Panel recommends making some of the changes to Policy 2(g) that give partial relief to the changes sought by the submitter. It is recommended that Policy 2(g) be amended to read:</p> <p><i>Provide for the integrated management of the coastal environment by:</i> <i>(a) implementing Plan provisions in managing the effects of activities (positive and <u>adverse</u>) by <u>having regard to the location, form and limits of the activity</u> undertaken in the coastal marine area on significant values and characteristics of the wider coastal environment; [...]</i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	232	<p>Amend</p> <p>Submitter seeks amendment to Policy 2(b) of the Plan to read:</p> <p><i>Provide for the integrated management of the coastal environment by: [...]</i></p> <p><i>(b) implementing policies, methods and rules in other regional plans in relation to <u>managing</u> adverse effects associated with diffuse and direct discharges to freshwater and air, and soil disturbance; [...]</i></p>	<p>Decline</p> <p>The submitter considers the term “manage” to be uncertain and points out that “avoidance” is required by the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel is unclear as to what the concerns are. It is the Hearing Panel’s view that managing adverse effects is an accurate description of what the Plan is attempting to do. It is not the Hearing Panel’s view that the <i>New Zealand Coastal Policy Statement</i> adopts a strictly “avoidance” regime. As previously noted in other submission points. The Policies must be read together. In addition to the General Policies, Activity-specific Policies 22 to 30 provide additional guidance and direction that, when read together, give effect to the <i>New Zealand Coastal Policy Statement</i>.</p>
43 – Royal Forest and Bird Protection Society	233	<p>Amend</p> <p>Submitter seeks amendment to Policy 2(e) of the Plan to read:</p> <p><i>Provide for the integrated management of the coastal environment by:</i></p> <p><i>(e) considering the effects of activities in the coastal marine area on outstanding natural features and landscapes or areas of outstanding natural character <u>or significant indigenous biodiversity</u> identified in other regional or district plans; [...]</i></p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought noting that activities in the coastal marine area can quite clearly have adverse effects on significant indigenous biodiversity as identified in other regional or district plans. It is recommended that Policy 2(e) be amended to read:</p> <p><i>(e) considering the effects of activities in the coastal marine area on outstanding natural features and landscapes or areas of outstanding natural character <u>or significant indigenous biodiversity</u> identified in other regional or district plans <u>for the Taranaki region</u>; [...]</i></p>
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
43 – Royal Forest and Bird Protection Society	234	<p>Amend</p> <p>Submitter expresses concern regarding Policy 2(c) of the Plan, which contains terminology that does not have a common meaning.</p>	<p>Accept</p> <p>The submitter has not expanded upon this comment and Hearing Panel assume they refer to “cross media effects”. In response to this and other submissions, the Hearing Panel recommends amending Policy 2 by deleting Clause (c) and inserting a new Clause (aa) that adopts a more plain English reading but also includes the principle of ki uta ki tai or interconnectedness.</p> <p>The new Clause (aa) would reads as follows:</p> <p><i><u>(aa) recognising ki uta ki tai by taking into account the interconnected nature of resources and natural processes in the management of adverse effects across air, land, fresh water bodies and the coastal environment; [...]</u></i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	235	Amend Submitter seeks amendment Policy 2(d) or Schedule 1 of the Plan to specify which areas have legal protection.	No relief necessary The Hearing Panel notes that all policies must be read together. Policy 1(a)(iii) already identifies marine areas with legal protection, these being Parinihi Marine Reserve, Ngā Motu/Sugar Loaf Islands Marine Protected Area and Tapuae Marine Reserve. Furthermore, the associated planning maps also specify which marine areas have legal protection. Further Plan changes as requested by the submitter to Policy 2(d) or Schedule 1 are not considered necessary.
43 – Royal Forest and Bird Protection Society	236	Amend Submitter seeks amendment to Policy 2(g) of the Plan to provide for collaboration consistent with Policies 4 and 5 of the <i>New Zealand Coastal Policy Statement</i> .	Accept in part The submitter suggests that Policy 2(g) is uncertain as it appears to limit collaboration to Policy 15 matters [Historic heritage] of the Plan and seek that the Policy align with Policies 4 [Integration] and 5 [Land or water managed or held under other acts] of the <i>New Zealand Coastal Policy Statement</i> . The submitter has identified a drafting error in the Policy whereby reference to working collaboratively with tangata whenua in accordance with Policy 15 [Historic heritage] is meant to be a reference to Policy 16 [Relationship with tangata whenua]. The Hearing Panel recommends that the drafting error be corrected while noting that Policy 2 (and other relevant policies in the Plan), when read as a whole, already give effect to Policies 4 [Integration] and 5 [Land or water managed or held under other acts] of the <i>New Zealand Coastal Policy Statement</i> .
45 – Powerco	237	Amend Submitter supports Policy 2 of the Plan subject to the amendment of Policy 2(f) to read: <i>Provide for the integrated management of the coastal environment by: [...]</i> <i>(f) managing natural and physical coastal resources in a manner that has regard to the social, economic and cultural objectives and well-being of the community and the functional need and/or location constraints of nationally or regionally important infrastructure; and [...]</i>	Accept The Hearing Panel agrees with the submitter that reference to “functional need” provides more clarity to Plan users noting that this has been defined in the Plan. Further to this, the Plan also defines “operational needs” which encompasses locational constraints which is recommended to be included following functional needs in Policy 2(f). The amended Policy 2(f) would read as follows: <i>(f) managing natural and physical resources in a manner that <u>recognises and provides for</u> the social, economic and cultural objectives and well-being of the community and the functional <u>needs and/or operational needs</u>, of regionally important infrastructure; <u>and industry</u> [...]</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	238	Amend Submitter seeks amendment to Policy 2(f) of the Plan to read: <i>Provide for the integrated management of the coastal environment by: [...]</i> <i>(f) managing natural and physical coastal resources in a manner that has regard to the social, economic and cultural objectives and well-being of the community and the functional <u>need</u> and/or location constraints of nationally or regionally important infrastructure; and[...]</i>	Accept As per Hearing Panel's response in submission point 237 above.
Further submissions – Transpower (26)		Support	
47 – Fonterra	239	Amend Submitter generally supports Policy 2 of the Plan subject to an amendment to Policy 2(f) to read: <i>Provide for the integrated management of the coastal environment by: [...]</i> <i>(f) managing natural and physical coastal resources in a manner that has regard to the social, economic and cultural objectives and well-being of the community and the functional and/or location constraints of nationally or regionally important infrastructure <u>and industry</u>; [...]</i>	Accept The submitter supports Policy 2 but believes the provisions should be extended to include regionally significant industry alongside regionally significant infrastructure. This request is made as the submitter considers that it is appropriate to recognise nationally and regionally important industry to the same extent as infrastructure, given the contribution of significant industry to the social and economic wellbeing of the region. The Hearing Panel notes that the Policy relates to integrated management and that it may be appropriate to consider regionally important industry, the Hearing Panel agrees with the submitter and recommend granting the relief sought.
Further submissions – Federated Farmers (2)		Support	
Further submissions –Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Oppose	
48 – Taranaki District Health Board	240	Amend Submitter seeks amendment to Policy 2(g) of the Plan to read: <i>Provide for the integrated management of the coastal environment by: [...]</i> <i>(g) working collaboratively with government departments, territorial authorities, <u>district health boards</u>, other agencies, and tangata whenua in accordance with Policy 15 [...]</i>	Accept The submitter requests specific reference to “district health boards” in Policy 2(g). the Hearing Panel believes that the suggested amendment to explicitly recognise the close working relationship between the Council and the Taranaki District Health Board, particularly in relation to coastal water quality, is appropriate and recommend that Policy 2(g) be amended accordingly.
	241	Amend	Accept

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
50 – Te Kāhui o Taranaki Trust		Submitter seeks amendment to Policy 2(a) of the Plan to read: <i>Provide for the integrated management of the coastal environment by:</i> <i>(a) implementing policies under section 5.1 of the Plan in managing the effects of activities (positive and negative adverse) undertaken in the coastal marine area on significant values and characteristics of the wider coastal environment [...]</i>	The Hearing Panel recommends granting the relief sought by the submitter and agrees that the use of “adverse” provides Plan users with a clearer meaning of Policy 2 and makes it consistent with wording elsewhere in the Proposed Plan and the RMA.
51 – Taranaki Energy Watch	242	Support	Accept
		Submitter supports the integrated management principles of Policy 2 of the Plan, in particular integrated activities to oil and gas activities that cross jurisdictional boundaries as well as being managed under multiple regimes.	Support noted. Policy 2 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
58 – Te Atiawa	243	Support	Accept
		Submitter supports the integrated management principles of Policy 2 of the Plan, in particular integrated activities to oil and gas activities that cross jurisdictional boundaries as well as being managed under multiple regimes.	Support noted. Policy 2 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
58 – Te Atiawa	244	Support	Accept
		Submitter seeks amendment to Policy 2 of the Plan to read: <i>Provide for integrated management of the coastal environment by:</i> <i>(a) implementing policies under section 5.1 of the Plan in managing the effects of activities (positive and negative adverse) undertaken in the coastal marine area on significant values and characteristics of the wider coastal environment [...]</i>	The Hearing Panel recommends granting the relief sought by the submitter.
59 - KiwiRail	245	Support	Accept
		Retain Policy 2(f) of the Plan as notified.	Support noted. Policy 2(f) is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
Policy 3 – Precautionary approach			
5 – Point Board Riders	246	Support	Accept
		Retain Policy 3 of the Plan as notified.	Policy 3 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
20 – Meridian Energy Limited	247	Support Retain Policy 3 of the Plan as notified.	Accept in part Policy 3 is retained subject to minor amendments as requested by other submitters that do not change the policy intent. The submitter presented a hearing statement for the Hearing Panel's consideration and requested that " <i>adaptive management</i> " be returned to the Plan as per the notified version (as opposed to the Section 42A report) and considers that the reference would be useful for Plan users. The Hearing Panel recommends declining this relief noting that adaptive management is not precluded from consideration during consent applications. Further, the Hearing Panel are concerned that if it is referenced within the policy that Plan users may assume that adaptive management approaches are inherently precautionary. The Hearing Panel considers that the inclusion provides more uncertainty for Plan users than being silent on the matter.
Further submissions 32 – Port Taranaki Ltd (32), Fonterra (47)		Support	
29 – Department of Conservation	248	Support Retain Policy 3 of the Plan as notified.	Accept Policy 3 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
37 – Petroleum Exploration and Production Association of NZ	249	Support Retain Policy 3 of the Plan as notified.	Accept Policy 3 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
43 – Royal Forest and Bird Protection Society	250	Amend The submitter references Policy 3 [Precautionary approach] of the <i>New Zealand Coastal Policy Statement</i> and notes that "adaptive management" is not included within the parameters of the precautionary approach. The submitter suggests that because it is not referenced within the <i>New Zealand Coastal Policy Statement</i> it should not be included within Policy 3 as it is not inherently precautionary but is, instead, a trial and error approach. Submitter seeks amendment to Policy 3 of the Plan to remove reference to " <i>adaptive management</i> ".	Accept The Hearing Panel does not agree that adaptive management equates to a "trial and error approach". Adaptive management requires that decisions, following the granting of a resource consent, be periodically reviewed and adjusted depending on monitoring and established trigger points. Thus, adaptive management may be useful for the management of some, but not all activities, in particular activities that are protracted and involve a number of decisions to be made throughout the life of the activity. Case law has determined that adaptive management can correctly be applied in relation to the requirements of the <i>New Zealand Coastal Policy Statement</i> even though it is not explicitly provided for within the Policy Statement itself.
Further submissions – Trans-Tasman Resources Ltd (6), Meridian Energy Ltd (20), Petroleum Exploration and		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Production Association of New Zealand (37)			Notwithstanding the above, the Hearing Panel agrees with the submitter that it is not necessary to explicitly reference "adaptive management" within Policy 3.
Further submissions – Taranaki Energy Watch (51)		Support	The Hearing Panel recommends deleting reference to "adaptive management" in Policy 3. The reference is unnecessary and could be viewed as encouraging its application in circumstances where it might not be appropriate. However, the Hearing Panel notes that deleting the term from the Policy would not preclude a resource consent application from considering adaptive management under the appropriate circumstances.
43 – Royal Forest and Bird Protection Society	251	Amend The submitter requests that Policy 3 include reference to the effects of climate change in order to provide for Policy 3(2) of the <i>New Zealand Coastal Policy Statement</i> which requires a precautionary approach to be adopted to use and management of coastal resources potentially vulnerable to the effects of climate change. Submitter seeks rewording of Policy 3 of the Plan to include reference to the effects of climate change and give effect to Policy 3 of the <i>New Zealand Coastal Policy Statement</i> .	No relief necessary The Hearing Panel agrees the precautionary approach is necessary for resources that may be vulnerable to the effects of climate change. However, explicit reference to climate change within Policy 3 is not considered necessary as it has been provided for elsewhere in the Plan. The Hearing Panel notes that all Policies must be read together and there are additional Policies that incorporate a precautionary approach to climate change. In particular, Policies 20 [Coastal hazards] and 46 [Reclamation] require structures, reclamations and works to be assessed over at least 100 year time frame to take into account the expected effects of climate change and sea level rise. The Hearing Panel recommends that Policy 3 be kept high level to promote its broad application to all coastal related issues rather than just climate change.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	252	Support Retain Policy 3 of the Plan as notified.	Accept Policy 3 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
50 – Te Kāhui o Taranaki Trust	253	Amend Submitter seeks amendment to Policy 3 of the Plan to read: <i>Adopt a precautionary approach, which may include using an adaptive management approach, where the effects of any activity on the coastal environment are uncertain, unknown, or little understood, but potentially significantly adverse.</i>	Decline The Hearing Panel notes that Policy 3 and the adoption of the precautionary approach contributes to giving effect to Policy 3 [Precautionary approach] of the <i>New Zealand Coastal Policy Statement</i> . The <i>New Zealand Coastal Policy Statement</i> requires coastal plans to adopt a precautionary approach toward proposed activities where the effects to the coastal environment are uncertain, unknown, or little understood.
Further submissions – Taranaki Energy Watch (51)		Oppose	Given the coastal environment is a dynamic environment, the effects of activities may often be uncertain, unknown or little understood. Accordingly, it is considered

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			appropriate that Policy 3 adopt a cautious approach when uncertain about the effects of use and development activities in the coastal management area.
55 –Kiwis Against Seabed Mining	254	Other Submitter states that the precautionary approach should be applied to objectives, policies and rules in the plan that relate to oil and gas, fishing and seabed mining activities.	No relief necessary The Hearing Panel notes that all General Policies and relevant Activity-specific Policies need to be read together. Policy 3 is a General Policy that applies when considering all use and development activities in the coastal marine area, including oil and gas, fishing and sea bed mining activities regulated under this Plan.

			appropriate that Policy 3 adopt a cautious approach when uncertain about the effects of use and development activities in the coastal management area.
Policy 4 – Extent and characteristics of the coastal environment			
2 – Federated Farmers	257	Amend Submitter generally supports Policy 4 of the Plan but would like the Plan to be amended to map the coastal environment.	Accept Support noted. The Council has worked closely with New Plymouth and South Taranaki district councils in identifying and mapping coastal areas of outstanding natural character and outstanding natural features and landscapes. Both district councils have commenced or about to commence their respective district plan reviews, which includes a coastal protection zone. For the purposes of integrated management and to promote alignment between the respective regional and district plans the Hearing Panel recommendeds that the Plan (and associated GIS layers and planning maps) be amended include an indicative extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans. Of note Policy 4 is still retained and aligns with Policy 1 of the <i>New Zealand Coastal Policy Statement</i> . Through the consenting process there will be opportunities for Council to further consider the indicative line and to confirm the extent and characteristics of the coastal environment on a case-by-case basis.
19 – South Taranaki District Council	258	Support Retain Policy 4 of the Plan as notified.	Accept Support noted. Policy 4 is retained subject to amendments to include a coastal environment line.
Further submissions – Port Taranaki Ltd (32)		Support	
29 – Department of Conservation	259	Amend Submitter seeks amendment to or deletion of Policy 4 of the Plan to instead identify and map the landward extent of the coastal environment.	Grant in kind Policy 4 gives effect to Policy 1 of the <i>New Zealand Coastal Policy Statement</i> in that it identifies the characteristics of the coastal environment line. The Council has worked closely with New Plymouth and South Taranaki district councils in identifying and mapping coastal areas of outstanding natural character and outstanding natural features and landscapes. Both district councils have commenced or about to commence their respective district plan reviews, which includes a coastal protection/environment zone.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>For the purposes of integrated management and to promote alignment between the respective regional and district plans, the Hearing Panel recommends that Policy 4 and associated GIS layers and planning maps be amended to identify an indicative landward extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans.</p> <p>However, the Hearing Panel considers that it is important for Policy 4 to continue to recognise and provide for opportunities, through the consenting process, to further consider the extent and characteristics of the coastal environment on a case-by-case basis.</p> <p>The reader is referred to the Department of Conservation's guidance on the <i>New Zealand Coastal Policy Statement</i>. The guidance simply describes 'coastal environment' as that part of the environment in which the coast is a significant part or element. However, the guidance also notes the difficulties in setting out an abstract definition which is capable of simple and ready application to any given situation. What constitutes the coastal environment will vary from place to place and according to the position from which a place is viewed.</p> <p>The Hearing Panel does not recommend deleting Policy 4. However, in the interests of certainty and clarity, the Hearing Panel recommends that the Plan (and associated GIS layers and planning maps) be amended to identify the indicative extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans. Such a line would make it easier for the submitter (and others) to assess whether activities are likely to fall within or outside the coastal environment.</p> <p><i>Determine the inland extent of the coastal environment for the purposes of policies under Section 5.1 of the Plan by:</i></p> <p><i><u>(a) having particular regard to areas identified in a district plan or proposed district plan as being the coastal environment or equivalent (map link); and</u></i></p> <p><i><u>(b) on a case-by-case basis, recognising:</u></i></p> <p><i><u>(i) areas landward of the coastal environment line where coastal processes, influences or qualities are significant, including areas at risk from coastal hazards; coastal vegetation and coastal habitat of indigenous species; elements and features of natural character, landscapes, visual qualities or amenity values; inter-related coastal marine and terrestrial systems; and may include items of cultural and historic heritage and physical resources and built facilities, coastal lakes, lagoons, tidal estuaries, saltmarshes, coastal wetlands and the margins of these areas; and</u></i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			(ii) the geographic extent to which activities within the coastal marine area may cause adverse effects on significant values and characteristics landward of the coastal marine area.
35 – Radio New Zealand Ltd	260	<p>Amend</p> <p>The submitter considers the current wording of Policy 4 to be too broad and may be difficult to implement in practice. They would also like clarification as to whether the Radio New Zealand Ltd facilities fall within or outside of the “coastal environment”, because it is not clear what the threshold is for “significance” of coastal processes or influences.</p> <p>Submitter seeks amendment to Policy 4 of the Plan to read:</p> <p><i>Determine the inland extent of the coastal environment for the purpose of policies under Section 5.1 of the Plan on a case-by-case basis by having regard to:</i></p> <p><i>(a) areas where coastal processes, influences or qualities are significant, <u>and where activities may cause adverse effects on significant values and characteristics in the coastal marine area</u>, including coastal lakes, lagoons, tidal estuaries, saltmarshes, coastal wetlands and the margins of these areas [...]</i></p>	<p>Grant in kind</p> <p>The reader is referred to the Department of Conservation’s guidance on the <i>New Zealand Coastal Policy Statement</i>. The guidance simply describes ‘coastal environment’ as that part of the environment in which the coast is a significant part or element. However, the guidance also notes the difficulties in setting out an abstract definition which is capable of simple and ready application to any given situation. What constitutes the coastal environment will vary from place to place and according to the position from which a place is viewed.</p> <p>The Hearing Panel does not recommend amending Policy 4(a) in the manner suggested by the submitter but do agree with amending the Plan to provide greater certainty in relation to where the coastal environment lies. It is recommended that the Plan (and associated GIS layers and planning maps) be amended to identify the indicative extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans. Such a line would make it easier for the submitter to assess whether their facilities fall within or outside the coastal environment.</p> <p>The revised Policy would read as follows:</p> <p><i>Determine the inland extent of the coastal environment for the purposes of policies under Section 5.1 of the Plan by:</i></p> <p><i>(a) <u>having particular regard to areas identified in a district plan or proposed district plan as being the coastal environment or equivalent (map link)</u>;</i></p> <p><i>(b) on a case-by-case basis, recognising:</i></p> <p><i>(i) areas</i> <u><i>landward of the coastal environment line</i></u> <i>where coastal processes, influences or qualities are significant, including <u>areas at risk from coastal hazards; coastal vegetation and coastal habitat of indigenous species; elements and features of natural character, landscapes, visual qualities or amenity values; inter-related coastal marine and terrestrial systems; and may include items of cultural and historic heritage and physical resources and built facilities</u></i>, coastal lakes, lagoons, tidal estuaries, saltmarshes, coastal wetlands and the margins of these areas; and</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>(ii) the geographic extent to which activities within the coastal marine area may cause adverse effects on significant values and characteristics landward of the coastal marine area.</i>
43 – Royal Forest and Bird Protection Society	261	Amend Submitter seeks amendment to Policy 4 of the Plan to remove "case-by-case".	Decline The Hearing Panel does not recommend granting the relief sought by the submitter but does propose an alternative relief that may address some of their concerns. For the purposes of integrated management and to promote alignment between the respective regional and district plans, the Hearing Panel recommends that Policy 4 and associated GIS layers and planning maps be amended to identify an indicative landward extent of the coastal environment that is aligned with the coastal environment lines (or their equivalent) identified in the South Taranaki and New Plymouth district plans. However, the Hearing Panel considers that it is important for Policy 4 to continue to recognise and provide for opportunities, through the consenting process, to further consider the extent and characteristics of the coastal environment on a case-by-case basis. The reader is referred to the Department of Conservation's guidance on the <i>New Zealand Coastal Policy Statement</i> . The guidance notes that the term 'coastal environment' is an environment in which the coast is a significant part or element. However, the guidance notes the difficulties in setting out an abstract definition which is capable of simple and ready application to any given situation. What constitutes the coastal environment will vary from place to place and according to the position from which a place is viewed and potential changes to that environment over time.

Policy 5 – Appropriate use and development of the coastal environment			
2 – Federated Farmers	266	Support Retain Policy 5 of the Plan as notified.	Accept Support noted. Policy 5 is retained subject to amendments made to offer relief to other submitters concerns where appropriate.
6 – Trans-Tasman Resources Ltd	267	Amend Submitter seeks amendments to Policy 5(b), (e), (f) and (g) of the Plan to recognise benefits from non-renewable resources and for the purposes of certainty and clarity in their interpretation and to read as follows: <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i> <i>(a) the functional need for [...]</i> <i>(b) the benefits to be derived from the activity at a local, regional and national level, including the potential contribution of aquaculture and marine based renewable energy or <u>mineral</u> resources;</i> <i>[...]</i> <i>(e) the degree to which the activity will be threatened by, or contribute to, coastal hazard risk, or pose a threat to public health and safety <u>risks</u> with particular reference to Policy 20;</i> <i>(f) the degree to which the activity contributes to the <u>maintenance</u>, enhancement or restoration of natural or historic heritage including by buffering areas and sites of historical heritage value;</i> <i>(g) the degree to which the activity contributes to the <u>maintenance</u>, enhancement or restoration of public access or public use of the coast including for recreation;</i> <i>[...]</i>	Accept in part The Hearing Panel considers the inclusion of “ <i>renewable energy</i> ” within Policy 5(b) to be in line with the requirements of Policy 6(1)(g) [Activities in the coastal environment] of the <i>New Zealand Coastal Policy Statement</i> to take into account the potential for renewable resources. However, the Hearing Panel considers the addition of mineral resources within the Policy to also be in line with Policy 6(2)(a) of the <i>New Zealand Coastal Policy Statement</i> whereby contributions to social, economic and cultural wellbeing of people and communities from use and development, including (but not limited to) the potential for renewable marine energy are recognised. Therefore, the Hearing Panel recommends granting the relief in part whereby the scope of Policy 5(b) is broadened to explicitly recognise mineral resources alongside aquaculture, renewable energy and other marine based energy plus other consequential changes to the Policy as requested by other submitters to read: [...] <i>(b) the benefits to be derived from the <u>other activities</u> at a local, regional and national level, including <u>the existing and potential contribution of petroleum and mineral resources, and</u> the potential contribution of <u>agriculture</u>, aquaculture, and renewable energy resources; [...]</i> The Hearing Panel also recommends recognising “maintenance” in (f) and (g).

12 – Chorus New Zealand Limited	269	Support Retain Policy 5 of the Plan as notified.	Accept Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
13 – Spark New Zealand Trading Limited	270	Support Retain Policy 5 of the Plan as notified.	Accept Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
14 – Vodafone New Zealand Limited	271	Support Retain Policy 5 of the Plan as notified.	Accept Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
19 – South Taranaki District Council	272	Support Retain Policy 5 of the Plan as notified.	Accept Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
20 – Meridian Energy Limited	273	Amend Submitter seeks amendment to Policy 5 of the Plan to read: <i>Policy 5: Appropriate <u>subdivision</u>, use and development in the coastal environment</i>	Accept Submitter suggests that Policy 5 would better reflect Policy 25 [Subdivision, use, and development in areas of coastal hazard risk] of the <i>New Zealand Coastal Policy Statement</i> by including references to “subdivision”.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>Determine whether <u>subdivision</u>, use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to: [...]</i>	The Hearing Panel agrees that the Policy applies to the coastal environment and therefore may apply to activities such as subdivision for which other parties (i.e. territorial authorities) have statutory responsibilities. The Hearing Panel therefore recommends amending Policy 5 to include reference to subdivision alongside other use and development. A new definition for "subdivision" is also recommended.
25 – New Zealand Petroleum and Minerals	274	Amend Submitter seeks amendment to Policy 5(b) of the Plan to recognise benefits from petroleum and mineral resources to read: <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to: [...]</i> <i>(b) the benefits to be derived from the activity at a local, regional and national level, including the potential contribution of aquaculture and marine based energy resources, <u>and the existing and potential contribution of petroleum and mineral resources</u>; [...]</i>	Accept Submitter believes that there should be explicit recognition of the economic and social benefits that petroleum and mineral resources provide the region and requests amending Policy 5 to achieve this. The Hearing Panel agrees and recommends amending Policy 5(b) to read: <i>(b) the benefits to be derived from <u>other activities</u> at a local, regional and national level, including <u>the existing and potential contribution of agricultural, petroleum and mineral resources</u>, and the potential contribution of aquaculture and renewable energy resources; [...]</i>

26 – Transpower NZ Ltd	275	Amend Submitter seeks an amendment to Policy 5 of the Plan to read: <i>Determine whether Provide for use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i> <i>(a) the functional need <u>or technical, operational and/or locational need</u> for the activity to be located in the coastal marine area; <u>conversely, activities that do not have a functional need to be located in the coastal marine area should not be</u></i>	Accept in part The suggested amendments have two parts. The Hearing Panel recommends granting part of the relief sought by the submitter. The Hearing Panel notes that Policy 5 provides direction and guidance on the 'appropriateness' of use and development. The Hearing Panel does not believe it appropriate that the Policy be amended to provide for <u>all</u> use and development, as some use and development is clearly not appropriate having regard to other policies in the Plan. Notwithstanding that, the Hearing Panel recommends amending Policy

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		located there (unless the non-marine related activity complements the intended use and function of the area) [...]	5(a) to refer to operational requirements (as well as functional needs) for activities located in the coastal marine area.
Further submissions – Trans-Tasman Resources Ltd (6)		Support in part/Neutral in part	The revised Policy would read as follows: <u>Consider</u> whether <u>subdivision and</u> use and development of the coastal environment is in an appropriate <u>location</u> and form, and within appropriate limits, by having regard to <u>(but not limited to) the following:</u>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	(a) the functional need <u>or operational need</u> for the activity to be located in the coastal marine area. <u>Activities that do not have a functional need or operational need to be located in the coastal marine area generally should not be located there (unless the non-marine related activity complements the intended use and function of the area); [...]</u>
32 – Port Taranaki	276	Amend The submitter suggests that Policy 5 does not adequately recognise important security and public safety issues facing ports and seeks amendments to Clause (g) that qualifies the enhancement or restoration of public access to exclude the Port and other area where public safety and security needs would be jeopardised. Submitter seeks an amendment to Policy 5(g) to read as follows: <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to: [...]</i> <i>(g) the degree to which the activity contributes to the enhancement or restoration of public access or public use of the coast including for recreation, <u>unless the type of activity, and the need to maintain public safety, makes enhancement or restoration of public access inappropriate; [...]</u></i>	Grant in kind The Hearing Panel notes that Policy 5 contains a suite of considerations and must be read in conjunction with the other General Policies and relevant Activity-specific Policies. Policy 5(e) already addresses public health and safety risks while Policy 17 [Public access] sets out circumstances where public access would not be appropriate. Accordingly, the Hearing Panel does not believe it necessary or appropriate to paraphrase other Plan provisions. Indeed there are risks in creating legal uncertainty and ambiguity in doing so. The Hearing Panel recommends an alternative relief whereby Policy 5(g) is amended to refer to 'appropriate' public access or use. Policy 17 would then apply and provides the guidance and direction on what constitutes appropriate public access and use in the coastal environment.

Further submissions – Taranaki Energy Watch (51)		Oppose	
35 – Radio New Zealand Ltd	277	Amend Submitter seeks amendment to Policy 5(a) of the Plan to read:	Decline The Hearing Panel recommends declining the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i> <i>(a) the functional need for the activity to be located in the coastal marine area <u>or the coastal environment</u>. Conversely, activities that do not have a functional need to be located in the coastal marine area <u>or the coastal environment</u> generally should not be located there [...]</i>	The Hearing Panel notes that Policy 5(a) is deliberately confined to activities being located in the coastal marine area because they have a functional need or operational need. This reflects the coastal marine area being a public space. The Hearing Panel does not believe that such restrictions are necessary or appropriate on the landward part of the coastal environment.
Further submissions – Powerco (45)		Support	
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	
40 – Te Rūnanga o Ngāti Mutunga	278	Amend Submitter seeks amendment to Policy 5 of the Plan to include a new clause to read (based on Policy 4(d) from the Draft Coastal Plan): <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to: [...]</i> <i><u>(dd) avoiding, remedying or mitigating adverse effects on the values and attributes of coastal areas of outstanding value, significant indigenous biodiversity and significant historic heritage and significant amenity values in accordance with policies 8, 11, 12 and 15.</u></i>	No relief necessary The Hearing Panel notes the concerns of the submitter with regards to managing activities to avoid, remedy or mitigate adverse effects on the values and attributes of coastal areas of outstanding value, significant indigenous biodiversity, historic heritage and amenity values but believe that the relief is not necessary on the basis that these concerns are addressed separately and in more detail within Policy 8 [Areas of outstanding value], Policy 14 [Indigenous biodiversity], Policy 15 [Historic heritage] and Policy 18 [Amenity values]. It is important to note that the General Policies (and relevant Activity-specific Policies) must be read as a whole and it is not necessary or useful to repeat or paraphrase the provisions of other policies.
40 – Te Rūnanga o Ngāti Mutunga	279	Amend Submitter seeks amendment to Policy 5(j)(iii) of the Plan to read: <i>Determine whether use and development of the coastal environment is in an appropriate place and form, and within appropriate limits, by having regard to:</i> <i>(j) the degree and significance of actual or potential adverse effects of the activity on the environment, including consideration of: [...]</i> <i>(iii) the efficacy of measures to avoid, remedy or mitigate such effects, or provide environmental compensation where effects cannot be <u>avoided</u>, remedied or mitigated [...]</i>	Decline The Hearing Panel notes that effects can always be avoided (e.g. cease operations) but that there is an expectation that in circumstances that adverse effects cannot be avoided then, at the very least, effects should be remedied or mitigated. Policy 5(j)(iii) deliberately targets those circumstances where residual effects remain despite measures to avoid, remedy or mitigate various adverse effects. In that situation environmental compensation could be considered. However, it should not be an option in lieu of an avoidance policy.
Further submissions – Taranaki Energy Watch (51)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
41 – Te Korowai o Ngāruahine Trust	280	Amend Submitter supports Policy 5 of the Plan with the recognition that has been given to the extent to which an activity may be commensurate to Māori values, culture, practices and traditions but seek amendment to Policy 5 to reinstate references (from the Draft Coastal Plan) to the protection of indigenous biodiversity, historic heritage and amenity values of the coastal environment.	No relief necessary The Hearing Panel notes the concerns of the submitter with regards to managing activities to avoid, remedy or mitigate adverse effects on the values and attributes of coastal areas of outstanding value, significant indigenous biodiversity, historic heritage and amenity values, but believes that the relief is not necessary on the basis that these concerns are already adequately addressed within Policy 8 [Areas of outstanding value], Policy 14 [Indigenous biodiversity], Policy 15 [Historic heritage] and Policy 18 [Amenity values]. It is important to note that the Policies must be read as a whole and it is not necessary or useful to repeat or paraphrase the provisions of other policies in this Policy.
43 – Royal Forest and Bird Protection Society	281	Amend The submitter expresses concern regarding the application of Policy 5 and seeks an amendment to the Plan to better provide for Policies 11, 13, 15, 17 and 20 of the <i>New Zealand Coastal Policy Statement</i> and achieve Plan objectives by identifying: <ul style="list-style-type: none"> • appropriate places or specify appropriate forms or limits • any areas where particular activities are inappropriate • appropriate places for aquaculture. 	Decline The submitter is seeking a level of specificity not considered appropriate or necessary in the Plan. As previously discussed all Policies must be read as a whole and it is not necessary or useful to repeat or paraphrase the provisions of the <i>New Zealand Coastal Policy Statement</i> . Nor is it considered necessary or appropriate to identify/specify/map appropriate places, forms or limits and conversely identify/specify/map where particular activities are inappropriate. Such matters would generally require a more nuanced consideration having regard to the various policies through the consenting process. The Hearing Panel further notes that there is no aquaculture in Taranaki and nor is there likely to be given the wild and rugged nature of the Taranaki coastal marine area. However, in the event that there was a proposal, the appropriateness of and location would be easily determined in accordance with the General Policies.
Further submissions – Transpower NZ Ltd (26)		Oppose	
43 – Royal Forest and Bird Protection Society	282	Amend Submitter seeks amendment to Policy 5 of the Plan to <ul style="list-style-type: none"> • insert “location” instead of “place” • amend Policy 5(b) to remove reference to “aquaculture” from Clause (b) due to the uncertainty of which locations this activity would be allowed and to recognise the potential for renewable energy consistent with Policy 6(2)(a) of the <i>New Zealand Coastal Policy Statement</i> and if necessary to provide for Policy 8(c) of the <i>New Zealand Coastal Policy Statement</i>. 	Accept in part At the hearing, the submitter presented some alternative relief to address their concerns that Policy 5 could be used independently of and derogate from the policy intent of other General Policies when determining what use and development might be “appropriate” within the coastal environment. The Hearing Panel recommends that for the purposes of certainty and clarity, Policy 5 be amended to refer to ‘consider’ instead of ‘determine’ at the onset of the policy and also to clarify that clauses (a) to (j) are not the only considerations to determine the appropriateness of use and development within the coastal environment. The

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> remove reference in Clause (j)(ii) to Policy 1 given it does not set out the values and characteristics which require protection under the <i>New Zealand Coastal Policy Statement</i> and is therefore maybe misleading and ambiguous. <p>The changes sought to Policy 5 are as follows:</p> <p><i>Determine whether use and development of the coastal environment is in an appropriate place <u>location</u> and form and within appropriate limits by having regard to:</i></p> <p><i>(a) the functional need for [...]</i></p> <p><i>(b) the benefits to be derived from the activity at a local, regional and national level, including the potential contribution of aquaculture and marine based energy resources</i></p> <p><i>[...]</i></p> <p><i>(j) the degree and significance of actual or potential adverse effects of the activity on the environment, including consideration of:</i></p> <p><i>(i) cumulative effects of otherwise minor activities;</i></p> <p><i>(ii) the sensitivity of the environment with particular reference to Policy 4; [...]</i></p>	<p>Hearing Panel also agrees that the amendment sought to “<i>appropriate locations</i>”, which provides consistency with wording adopted in other Plan provisions.</p> <p>The beginning of Policy 5 would read as follows:</p> <p><i><u>Consider</u> whether <u>subdivision and</u> use and development of the coastal environment is in an appropriate <u>location</u> and form, and within appropriate limits, by having regard to <u>(but not limited to) the following:</u> [...]</i></p> <p>The Hearing Panel further agrees to amending Clause (j)(ii) to delete reference to Policy 1. Policy 1 only refers to the coastal management areas while other policies in the Plan (recognising that all General Policies must be read together) are at a finer spatial scale and are likely to be more applicable when determining the sensitivity of the environment.</p> <p>In relation to deleting reference to aquaculture, the Hearing Panel does not recommend granting the relief sought. Policy 8 [Aquaculture] of the <i>New Zealand Coastal Policy Statement</i> requires those exercising functions and powers under the RMA to recognise the potential contribution of aquaculture by, amongst other things, including provisions for such activities in Coastal Plan. However, unlike other regions, the nature of the Taranaki coast is such that it is not suited to traditional aquaculture activities due to the very rough seas and high turbidity offshore and nil demand for space for aquaculture. Taranaki has no aquaculture and so far has not had to identify Aquaculture Management Areas. Notwithstanding that, some explicit but limited policy recognition in the Plan for potential aquaculture activities is considered appropriate should changes in technology or in potential species for marine farming occur over the life of the Plan.</p> <p>In relation to amending the Policy to recognise the importance of renewable energy, the Hearing Panel believes this has already been provided for within the current drafting of Policy 5(b) of the Plan, which reads “...<i>the benefits would be derived from the activity at a local, regional and national level, including the potential contribution of aquaculture and marine based <u>renewable</u> energy resources [...]</i>”.</p> <p>However, the Hearing Panel notes that other requested amendments have also been made to broaden the scope of Clause (b) to read:</p> <p><i>(b) the benefits to be derived from <u>other activities</u> at a local, regional and national level, including <u>the existing and potential contribution of agricultural, petroleum and mineral resources, and</u> the potential contribution of aquaculture and renewable energy resources; [...]</i></p>

Activities that do not have a functional need or operational need to be located in the coastal marine area generally should not be located there (unless the non-marine related activity complements the intended use and function of the area); [...]</i></p> <p><i>(c) the appropriateness of the proposed design, methodology, location or route of the activity in the context of the receiving environment and any possible alternatives, including best practicable options for preventing or minimising adverse effects on the environment; [...]</i></p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	284	<p>Amend</p> <p>Submitter seeks amendment to Policy 5(a), (c) and (e) of the Plan to read:</p> <p><i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i></p> <p><i>(a) the functional need for the activity to be located in the coastal marine area.</i> Conversely, aActivities that do not have a functional need to be located in the coastal marine area generally should not be located there (unless the non-marine related activity complements the intended use and function of the area);</p> <p>[...]</p> <p><i>(c) the appropriateness of the proposed design, and methodology, and whether it is the best practicable option, location or route of the activity in the context of the receiving environment and any possible alternatives;</i></p> <p>[...]</p> <p><i>(e) The degree to which the activity will be threatened by, or contribute to, subject to unacceptable risks or exacerbate adverse effects arising from coastal hazards</i></p>	<p>Accept in part</p> <p>The Hearing Panel recommends amending Policy 5(a) as sought by the submitter but recommend alternative reliefs to that proposed with additional changes made to Clauses (c) and (e) in response to other submitters and to reflect that often little can be done to control the coastal hazard risk. The amended Clauses (c) and (e) would read as follows:</p> <p><i>(c) the appropriateness of the proposed design, methodology, location or route of the activity in the context of the receiving environment and any possible alternatives, including best practicable options for preventing or minimising adverse effects on the environment; [...]</i></p> <p><i>(e) the degree to which the activity will be subject to unacceptable risks or exacerbated coastal hazards, or public health and safety with particular reference to Policy 20; [...]</i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>risk, or pose a threat to public health and safety with particular reference to Policy 20; [...]</i>	
47 – Fonterra	285	<p>Amend</p> <p>Submitter believes that it is appropriate to provide for structures in the coastal marine area that have an operational requirement to be located in the coastal environment and not limit Policy 5(a) to those activities that have a functional need only.</p> <p>Submitter seeks amendment to Policy 5(a) of the Plan to read:</p> <p><i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i></p> <p><i>(a) the functional need <u>or operational requirement</u> of the activity to be located in the coastal marine area. Conversely, activities that do not have a functional need <u>or operational requirement</u> to be located in the coastal marine area generally should not be located there (unless the non-marine related activity complements the intended use and function of the area); [...]</i></p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought by the submitter. The amendment of Policy 5(a) would provide for activities that might not have "functional need" to be located within the coastal marine area but nevertheless their operational needs or constraints justify their presence there.</p>
Further submissions – Transpower NZ Ltd (26)		Support in part	
47 – Fonterra	286	<p>Amend</p> <p>Submitter requests specific recognition of the contribution that industries, such as dairy processing, make to the economic and social well-being of the region</p> <p>Submitter seeks amendment to Policy 5(b) of the Plan to read:</p> <p><i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i></p> <p><i>(b) the benefits to be derived from the activity at a local, regional and national level, including the potential contribution of <u>dairy manufacturing</u>, aquaculture and marine based renewable resources. [...]</i></p>	<p>Grant in kind</p> <p>At the hearing of submissions, the submitter noted that Policy 5 already refers to specific industries with reference to petroleum and mineral resources, aquaculture and renewable energy resources and considers that reference to 'dairy manufacturing' should also be made.</p> <p>The Hearing Panel note that reference to petroleum and mineral resources, aquaculture and renewable energy resources are consistent with those activities identified in Policy 6 (1)(a), Policy 6 (2)(a) and Policy 8 of the <i>New Zealand Coastal Policy Statement</i>. Notwithstanding that, the Hearing Panel acknowledges that agriculture is the largest industry in the region and therefore agrees with the submitter that the importance of agriculture to this region is a point of difference from many other regions and it should be acknowledged in the Policy.</p> <p>The Hearing Panel recommends an alternative relief whereby Policy 5(b) is amended to refer to "agriculture", which encompasses, but is not limited to dairy manufacturing.</p>
	287	Support	Accept

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
48 – Taranaki District Health Board		Retain Policy 5 of the Plan as notified.	Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
50 – Te Kāhui o Taranaki Trust	288	Amend Submitter seeks amendment to Policy 5(j)(iii) of the Plan to read: <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to:</i> [...] <i>(j)(iii) the efficacy of measures to avoid, remedy or mitigate such effects, or provide environmental compensation where effects cannot be <u>avoided</u>, remedied or mitigated [...]</i>	Decline The Hearing Panel notes that effects can always be avoided (e.g. cease operations) but that there is an expectation that in circumstances that adverse effects cannot be avoided then, at the very least, effects should be remedied or mitigated. Policy 5(j)(iii) deliberately targets those circumstances where residual effects remain despite measures to avoid, remedy or mitigate various adverse effects. In that situation environmental compensation could be considered. However, it should not be an option in lieu of an avoidance policy.
51 – Taranaki Energy Watch	289	Amend Submitter seeks amendment to Policy 5(j) of the Plan to incorporate the precautionary approach.	Decline The Hearing Panel recommends declining the relief sought as this matter is already addressed in a separately stand-alone policy (Policy 3) that also applies alongside other relevant policies when considering use and development in the coastal marine area.
58 – Te Atiawa	290	Amend Submitter seeks amendment to Policy 5 of the Plan to include a new clause and read (based on Policy 4(d) from the Draft Coastal Plan): [...] <u>avoiding, remedying or mitigating adverse effects on the values and attributes of coastal areas of outstanding value, significant indigenous biodiversity and significant historic heritage and significant amenity values in accordance with policies 8, 11, 12 and 15.</u>	No relief necessary The Hearing Panel notes the concerns of the submitter with regards to managing activities to avoid, remedy or mitigate adverse effects on the values and attributes of coastal areas of outstanding value, significant indigenous biodiversity, historic heritage and amenity values, but believes that the relief is not necessary on the basis that these concerns are already addressed within Policy 8 [Areas of outstanding value], Policy 14 [Indigenous biodiversity], Policy 15 [Historic heritage] and Policy 18 [Amenity values]. It is important to note that the policies must be read as a whole and it is not necessary or useful to repeat or paraphrase the provisions of other policies.
58 – Te Atiawa	291	Amend Submitter seeks amendment to Policy 5(j)(iii) of the Plan to read: <i>Determine whether use and development of the coastal environment is in an appropriate place and form and within appropriate limits by having regard to: [...]</i>	Decline The Hearing Panel notes that effects can always be avoided (e.g. cease operations) but that there is an expectation that in circumstances that adverse effects cannot be avoided then, at the very least, effects should be remedied or mitigated.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(j) the degree and significance of actual or potential adverse effects of the activity on the environment, including consideration of: [...]</p> <p>(iii) the efficacy of measures to avoid, remedy or mitigate such effects, or provide environmental compensation where effects cannot be <u>avoided</u>, remedied or mitigated [...]</p>	<p>Policy 5(j)(iii) deliberately targets those circumstances where residual effects remain despite measures to avoid, remedy or mitigate various adverse effects. In that situation environmental compensation could be considered. However, it should not be an option in lieu of an avoidance policy.</p>
59 – KiwiRail	292	<p>Support</p> <p>Retain Policy 5 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 5 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>
60 – Te Kaahui o Rauru	293	<p>Other</p> <p>In relation to Policy 5 of the Plan, submitter seeks clarification as to why the aspirations of iwi to “develop, use or protect” was removed from equivalent policy in the Draft Coastal Plan.</p>	<p>No relief necessary</p> <p>In relation to the submitter's query, following consultation on the Draft Plan, amendments were made to the Plan to highlight to the reader that all General Policies need to be considered collectively (and not individually) in the application of regional rules. It was therefore unnecessary to constantly cross reference individual General Policies to other policies and indeed there are risks inherent in ‘cherry picking’ such policies (while being silent on others).</p>
NEW Policy 5A – Aquaculture			
43 – Royal Forest and Bird Protection Society	294	<p>Amend</p> <p>Submitter seeks amendment to the Plan by:</p> <ul style="list-style-type: none"> including a new policy that identifies appropriate places for aquaculture; AND until ‘appropriate’ places are identified, ensuring Plan provisions: <ul style="list-style-type: none"> exclude aquaculture activities from Outstanding Value, Estuaries Unmodified, Estuaries Modified coastal management areas state that consents will not be granted for aquaculture in any area with the values and characteristics set out in Policy 14 of the Plan (as revised to address submitter's relief) aquaculture proposals must be consistent with General Policies 1 to 21 of the Plan. 	<p>Decline</p> <p>The Hearing Panel does not consider it appropriate or necessary to identify appropriate places for aquaculture as the Taranaki coastal marine area is not currently conducive to aquaculture activities. The nature of the Taranaki coast is such that it is not suited to traditional aquaculture activities due to the very rough seas and high turbidity offshore and nil demand for space for aquaculture. Taranaki has no aquaculture and so far has not had to identify Aquaculture Management Areas.</p> <p>As a result, the Hearing Panel suggests that the other reliefs requested by the submitter are not necessary. However, the Hearing Panel notes that in all instances of resource consent applications all the General Policies (1 to 21) and the relevant Activity-specific policies apply and will be considered.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response

Policy 6 – Activities important to the well-being of people and communities			
2 – Federated Farmers	295	Amend Submitter seeks amendment to Policy 6 of the Plan to read: <i>Recognise and provide for new and existing infrastructure and farming activities of regional importance or of significance to the social, economic and cultural well-being of people and communities in Taranaki, subject to appropriate management of adverse environmental effects.</i>	Decline The Hearing Panel recognises that farming is regionally significant but recommends declining the relief sought as Policy 6 addresses regionally important infrastructure assets – particularly those required to be provided for through national environmental standards and the resulting obligations that regional and district councils recognise and provide for these assets. This approach is consistent with other second generation regional plans around New Zealand.
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Oppose	The Hearing Panel recommends minor changes to the Policy to clarify that policy direction and guidance is on regionally important infrastructure (for which there is a definition). Of note farming activities are already adequately provided for under Policy 5, which determines the 'appropriateness' of <u>all</u> use and development activities in the coastal environment by having regard to the benefits to be derived from activities at a local, regional and national level. Policy 5(b) is also recommended to be amended to recognise the existing and potential contribution of agricultural activities to this region.
19 – South Taranaki District Council	296	Support Retain Policy 6 of the Plan as notified.	Accept Support noted. Policy 6 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
20 – Meridian Energy Limited	297	Support Retain Policy 6 of the Plan as notified.	Accept Support noted. Policy 6 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
23 – New Plymouth District Council	298	Support Retain Policy 6 of the Plan as notified.	Accept Support noted. Policy 6 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
26 – Transpower NZ Ltd	299	Amend The submitter supports the intent of Policy 5 but is concerned that infrastructure that is "nationally significant" may not be interpreted to also be "regionally	Accept in part Of note the Plan's definition of "regionally important infrastructure" includes infrastructure of regional and national importance and includes the national electricity

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><i>significant</i>". The submitter further wishes to include explicit recognition of the benefits of a reliable and secure supply of electricity. The submitter believes that such amendments would give better effect to Policy 1 of the <i>National Policy Statement on Electrical Transmission</i>.</p> <p>Submitter seeks amendment to Policy 6 of the Plan to read:</p> <p><i>Recognise and provide for new and existing infrastructure of <u>national or</u> regional importance or of significance to the social, economic and cultural well-being of people and communities in Taranaki, <u>including recognition of the benefits of a reliable, secure and efficient supply of electricity</u>, subject to appropriate management of adverse environmental effects.[...]</i></p> <p>OR</p> <p>Amend the Plan to include a standalone policy which recognises and provides for the benefits of a reliable, secure and efficient supply of electricity.</p>	<p>grid. The Hearing Panel do not recommend granting the relief in the manner sought by the submitter and note that inconsequential amendments are recommended to the Plan to remove reference to "<i>nationally important infrastructure</i>" where it is used to promote consistency in the use of terminology throughout the Plan.</p> <p>Notwithstanding the above, the Hearing Panel does recommend amending Policies 5 and 6 in response to issues raised by the submitter. The amendments include the addition of a new sub clause for Policy 5 which reads:</p> <p>[...]</p> <p><i>(aa) whether the activity relates to the use, operation, maintenance and alteration of <u>regionally important infrastructure</u> [...]</i></p> <p>The Hearing Panel further recommends amending the heading and content of Policy 6 to include reference to the safe and efficient operation of regionally important infrastructure to read (Hearing Panel notes additional amendments as sought by other submitters are also included):</p> <p><i>Policy 6: <u>Benefits of regionally important infrastructure</u></i></p> <p><i>Recognise <u>the benefits of</u> new and existing <u>regionally important infrastructure</u> to the social, economic and cultural well-being of people and communities in Taranaki, <u>and provide for the safe and efficient operation of regionally important infrastructure</u> subject to appropriate <u>avoidance, remediation or mitigation</u> of adverse environmental effects.</i></p> <p>A new Policy 6A [Management of adverse effects of the National Grid] is also proposed.</p>

Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
6 – Trans-Tasman Resources Ltd	323	Amend The submitter is unsatisfied with Policy 8 as the current wording would require the avoidance of all adverse effects no matter how trivial or transitory. While the current wording is consistent with wording within the <i>New Zealand Coastal Policy Statement</i> (Policy 13 1(a) [Preservation of natural character] and Policy 15(a) [Natural features and natural landscapes]) the Supreme Court in <i>King Salmon</i> recognised that those <i>New Zealand Coastal Policy Statement</i> policies were not intended to ban any effects, no matter how minor, or transitory. Submitter seeks amendment to Policy 8 to read: <i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 1 from inappropriate use and development by:</i> <i>(a) avoiding adverse effects of activities (other than minor or transitory effects) on the values and characteristics identified in Schedule 2 that contribute to areas: [...]</i>	Decline The Hearing Panel agrees that minor or transitory effects are not necessarily required to be avoided within Policy 8. In the recent <i>King Salmon</i> decision, the Supreme Court ruled that avoidance policies do not necessarily rule out minor and transitory effects. Notwithstanding that, the Hearing Panel does not consider it necessary to include explicit recognition of minor and transient effects within Plan policies. Indeed there are risks in doing so. The Hearing Panel believes that it is more appropriate for the interpretation of Plan policies to rely on case law when determining the extent of effects which are necessary to be avoided. The current wording reflects the wording of the <i>New Zealand Coastal Policy Statement</i> and will ensure that any evolution of case law can be taken into consideration during the consenting process.

19 – South Taranaki District Council	324	Amend Retain Policy 8 as notified.	Accept Support noted. Policy 8 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
26 – Transpower NZ Ltd	325	Amend Submitter seeks amendment to Policy 8 of the Plan to delete Clause (b) or replace it with a new clause specifically addressing the National Grid. The submitter wishes that the Plan clearly recognise that the planning and development of transmission infrastructure in the coastal parts of the rural environment should 'seek to avoid' rather than 'avoid' adverse effects on the values and characteristics of outstanding natural landscapes and areas of high natural character. The submitter believes that current wording would be unreasonably restrictive in respect of the planning and development of transmission infrastructure. Further, the submitter explains that Policy 8 of the <i>National Policy Statement of Electricity Transmission</i> requires the National Grid to 'seek to avoid'. Proposed amendments read as follows: <i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 1 from inappropriate use and development by:</i> [...] (b) maintaining significant seascapes and visual corridors associated with outstanding natural features and landscapes, including views from within the landscapes or features, and views of the landscapes and features. OR <u>(b) specific to the National Grid, seeking to avoid adverse effects of activities associated with the National Grid on the values and characteristics identified in Schedule 2 that contribute to areas:</u>	Accept The Hearing Panel recommends amending the Plan to include a new National Grid specific policy that addresses the concerns raised by the submitter and gives effect to the <i>National Policy Statement for Electricity Transmission</i> (NPS-ET). In particular, the Hearing Panel recognises that the NPS-ET directs the National Grid to "seek to avoid" adverse effects which is reflected in the policy. The new Policy would read as follows: <u>Policy 6A: Management of adverse effects of the National Grid</u> <u>Where the National Grid has a functional need or operational need to locate in the coastal environment, manage the adverse effects arising from their activities by:</u> <u>(a) recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</u> <u>(b) seeking to avoid adverse effects on:</u> <u>(i) areas of outstanding value;</u> <u>(ii) significant indigenous biodiversity;</u> <u>(iii) historic heritage as identified in schedules 5A and 5B; and</u> <u>(iv) nationally or regionally significant surf breaks as identified in Schedule 7A and B;</u> <u>(c) where it is not practicable to avoid adverse effects on the values of the areas listed in (b) above because of the functional needs or operational needs of the National Grid, remedy or mitigate adverse effects on those values; and</u> <u>(d) avoiding, remedying or mitigating other adverse effects.</u>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(i) having outstanding natural character; and/or</u></p> <p><u>(ii) being outstanding natural features and landscape;</u></p> <p><u>within or adjoining coastal management area – Outstanding Value [...]</u></p>	Supplementary evidence presented by the submitter at the hearing, suggested a variation of the above based upon discussions with the Department of Conservation and Royal Forest and Bird Society. However, at the time of writing this report, neither of these parties have indicated their support for their suggested amendments. The Hearing Panel recommends retaining the previous suggested wording for Policy 6A
29 – Department of Conservation	326	<p>Amend</p> <p>Submitter seeks amendment to Policy 8 to read:</p> <p><i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 42 from inappropriate use and development by [...]</i></p>	Accept
Further submissions – Trans-Tasman Resources Ltd (6)		Support	Schedule 1 identifies the five coastal management areas, including those of Outstanding Value, and is specific to the coastal marine area. Schedule 2 provides additional information specific to coastal areas of Outstanding Value and which applies to both the coastal marine area and landward components of the coastal environment. The Hearing Panel therefore recommends that the suggested amendment be accepted to ensure the broader consideration of values, characteristics and attributes that make these areas outstanding, irrespective of being on the seaward or landward parts of the coastal environment.
43 – Royal Forest and Bird Protection Society	327	<p>Amend</p> <p>The submitter suggests that the approach under Policy 8 limits the identification of outstanding natural features and landscapes to those areas set out in Schedules 1 and 2. This creates uncertainty as to whether the plan would recognise or enable the identification of other outstanding areas landward of the CMA.</p> <p>The submitter further suggests that the lack of criteria setting out the values and characteristics upon which the outstanding natural features and landscapes were determined means it is uncertain whether the scheduled areas achieve Policy 13 [Preservation of natural character] and 15 [Natural Features and natural landscapes] of the <i>New Zealand Coastal Policy Statement</i>.</p> <p>Submitter seeks amendment to the Plan by deleting Policy 8.</p>	<p>Decline</p> <p>The Hearing Panel does not believe it necessary or appropriate to delete Policy 8 of the Plan.</p> <p>The issue raised by the submitter refers to the inclusions and identification criteria of the Scheduled areas that relate to Policy 8. Of note, the Council has worked closely with the New Plymouth and South Taranaki district councils in identifying, mapping and describing natural character, features and landscapes along the Taranaki coastline. Much of this work was addressed in a separate report <i>Regional Landscape Study of the Taranaki Coastal Environment</i>, which was prepared and consulted on as part of the Coastal Plan review. This work and consultation on the report informed the section 32 analysis relating to the Plan.</p> <p>Given that coastal areas of outstanding value should, by their definition of being outstanding or exceptional, be clearly identifiable (and that Schedule 2 of the Plan already identifies such areas), the Hearing Panel does not believe it is necessary to revisit this work.</p>
43 – Royal Forest and Bird Protection Society	328	<p>Amend</p> <p>Submitter seeks amendment to Policy 8 of the Plan to read:</p>	Accept in part
			Schedule 1 identifies the five coastal management areas, including those of Outstanding Value, and is specific to the coastal marine area. Schedule 2 provides additional information specific to coastal areas of Outstanding Value and which

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value, <u>including those areas</u> identified in Schedule 42 from inappropriate use and development by:</i></p> <p><i>(a) avoiding adverse effects of activities, <u>including those</u> areas on the values and characteristics identified in Schedule 2, that contribute to areas: [...]</i></p>	<p>applies to both the coastal marine area and landward components of the coastal environment. The Hearing Panel therefore recommend that the suggested amendment to refer to Schedule 2 (rather than Schedule 1) be accepted to promote the broader consideration of values, characteristics and attributes that make these areas outstanding, irrespective of being on the seaward or landward parts of the coastal environment.</p> <p>In relation to the other amendments sought, the Hearing Panel considers Schedule 2 to be a complete and comprehensive list of areas of outstanding value. Therefore, reference to "including" is not appropriate. However, notwithstanding the above, the Hearing Panel consider that the values identified in Schedule 2 may not be definitive and agree with the submitter that there may be scope for additional values to be included over time.</p> <p>The Hearing Panel recommend amending the Policy 8 of the Plan to read as follows:</p> <p><i>Policy 8 Areas of outstanding value</i></p> <p>[...]</p> <p><i>(a) avoiding adverse effects of activities on the values and characteristics, <u>including those</u> identified in Schedule 2 [...]</i></p>
45 – Powerco	329	<p>Amend</p> <p>Submitter seeks that the Council revisit mapping of areas of outstanding natural features and landscapes</p> <p>OR</p> <p>amend Policy 8 of the Plan to recognise the presence of infrastructure within areas of outstanding natural features and landscapes by adding a new clause (c) to read:</p> <p><i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 1 from inappropriate use and development by: [...]</i></p> <p><i><u>(c) recognising the need to provide for the ongoing operation, maintenance, and upgrade of existing infrastructure.</u></i></p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. Of note, the Council has worked closely with the New Plymouth and South Taranaki district councils in identifying and mapping coastal areas of outstanding natural character and outstanding natural features and landscapes and there is alignment between the plans in relation to the areas identified. Mapping was appropriately based on values and attributes of the area rather than the presence (or otherwise) of particular use and development.</p> <p>In relation to the alternative relief of amending Policy 8, the Hearing Panel does not believe any relief is necessary. The Hearing Panel notes all General Policies must be read together. Policies 5, 6 and 7 already recognise the need to provide for the ongoing operation, maintenance, and upgrade of existing infrastructure.</p>

46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	330	Amend Submitter seeks that the Council revisit mapping of areas of outstanding natural features and landscapes OR amend Policy 8 of the Plan by adding a new clause (c) to read: <i>Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 1 from inappropriate use and development by: [...]</i> <u>(c) recognising the need to provide for the ongoing operation, maintenance, and upgrade of existing infrastructure.</u>	Decline The Hearing Panel recommends declining the relief sought by the submitter. Of note, the Council has worked closely with the New Plymouth and South Taranaki district councils in identifying and mapping coastal areas of outstanding natural character and outstanding natural features and landscapes and there is alignment between the plans in relation to the areas identified. Mapping was appropriately based on values and attributes of the area rather than the presence (or otherwise) of particular use and development. In relation to the alternative relief of amending Policy 8, the Hearing Panel does not believe any relief is necessary. The Hearing Panel notes all General Policies must be read together. Policies 5, 6 and 7 already recognise the need to provide for the ongoing operation, maintenance, and upgrade of existing infrastructure.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
60 – Te Kaahui o Rauru	331	Amend Submitter seeks amendment to Policy 8 to include “underwater” visual quality as part of seascape.	No relief necessary The Hearing Panel suggests that Policy 8 already addresses underwater visual quality where that attribute contributes to the sensory or associative values identified in Schedule 2 of the Plan for coastal areas of outstanding values. In addition, Policy 8 reads “(b) maintaining significant seascapes and visual corridors associated with outstanding natural features and landscapes, <u>including views from within the landscapes or features, and views of the landscapes and features</u> ”. The Hearing Panel considers that underwater visual quality is encompassed by the underlined provision where the underwater visual quality of the area is significant. No change is therefore considered necessary.
Policies 8 to 15 – Natural and historic heritage and values			
41 – Te Korowai o Ngāruahine Trust	332	Amend Submitter seeks amendment to Policies 8 to 15 of the Plan to delete reference to significant adverse effects and replace with <u>adverse effects</u> .	Decline

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Transpower NZ Ltd (26)		Oppose	Use of the term “ <i>significant adverse effects</i> ” in policies of the Plan is deliberate. The application of the term will depend upon its context but indicates adverse effects on values and uses of the coastal environment that are more than minor. All activities have some effect and granting the relief would unnecessarily preclude many use and development activities across the coastal environment, regardless of the benefits of the activity and or whether the effects were minor or transitional. Policies 8(a), 12, 14(a) and 15(a) already require a high level of protection through the avoidance of all adverse effects on areas of outstanding value, areas where coastal water is to be restored, significant indigenous biodiversity and historic heritage. However, a tiered level of protection has deliberately been adopted whereby other policies provide a lower but still very high level of protection relating to avoiding significant adverse effects on other natural and historic heritage values (refer Policy 9, 13, 14(b) and 15(b)). The Policy references to “ <i>significant adverse effects</i> ” is deliberate and, in the Hearing Panel’s view, appropriate.

	341	Amend	Decline

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga		<p>Submitter seeks amendment to Policy 9 of the Plan by including a new Clause (b) to differential between 'natural character' and 'natural features and landscapes' to read as follows:</p> <p><u>(b) Recognise that natural character is not the same as natural features and landscapes or amenity values and may include matters such as:</u></p> <p><u>(i) Natural elements, processes and patterns;</u></p> <p><u>(ii) Biophysical, ecological, geological and geomorphological aspects;</u></p> <p><u>(iii) Natural landforms such as headlands, peninsulas, cliffs, dunes, wetlands, reefs, freshwater springs and surf breaks;</u></p> <p><u>(iv) The natural movement of water and sediment;</u></p> <p><u>(v) The natural darkness of the night sky;</u></p> <p><u>(vi) Places or areas that are wild or scenic;</u></p> <p><u>(vii). A range of natural character from pristine to modified and</u></p> <p><u>(viii). Experiential attributes, including the sounds and smell of the sea; and their context or setting.</u></p>	<p>The submitter considers that the requested addition would bring the policy in line with the <i>New Zealand Coastal Policy Statement</i> and add depth to the definition of natural character as protected in the Plan.</p> <p>The requested addition represents an unnecessarily high level of detail, which is essentially supporting information. Such matters were previously addressed in a separate report <i>Regional Landscape Study of the Taranaki Coastal Environment</i>, which was prepared and consulted on as part of the Coastal Plan review.</p> <p>The Hearing Panel further notes that the detail provided by the submitter has already been considered by the Council and has informed the drafting of the Plan and its mapping. Recognition that natural character, natural feature, natural landscapes and amenity values is encompassed within the Plan's definition for those terms, even if those characteristics are not expressly or independently mentioned.</p> <p>The Hearing Panel believes the proposed relief sought by the submitter is unnecessary and does not recommend amending the Policy as sought by the submitter.</p>
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
43 – Royal Forest and Bird Protection Society	342	<p>Amend</p> <p>Submitter seeks amendment to the Plan by deleting Policy 9.</p>	<p>Decline</p> <p>The submitter contends that Policy 9 of the Plan is uncertain. The submitter suggests that the inclusion of significant areas of indigenous vegetation and historic heritage in the policy overlaps and creates inconsistency with Policies 14 and 15 of the Plan. The submitter further suggests that the policy does not recognise that natural character is different to natural features and landscapes, nor does it provide for the assessment or identification required under Policies 13 and 15 of the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel does not recommend deleting Policy 9. The Hearing Panel believes that the Plan has given full effect to the <i>New Zealand Coastal Policy Statement</i>, including undertaking a regional landscape study of the Taranaki coastal environment. Notwithstanding the above, Hearing Panel recommends amendments to Policy 9 to address some of the concerns raised by the submitter (refer submission point 343 below).</p>
Further submissions – Port Taranaki Ltd (32)		Oppose	
	343	Amend	Accept in part

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society		<p>Submitter seeks amendments to Policy 9 of the Plan by:</p> <ul style="list-style-type: none"> including a new clause that reads: <i>Protect the natural character, features, and landscapes of the coastal environment by: [...]</i> <u>(ix) avoiding adverse effects of activities on natural character of the coastal environment with outstanding natural character and on outstanding natural features;</u> amending Policy 9(a)(v) to read: <u>(v) maintains the integrity of significant areas of indigenous vegetation protects significant indigenous biodiversity and maintains or enhances indigenous biodiversity [...]</u> 	<p>The submitter is concerned that Policy 9 does not provide for avoidance of adverse effects for outstanding values which may not be identified in Schedule 2.</p> <p>The submitter is also concerned that there are inconsistencies with directive policies for protection. In particular, it is the submitter's view that Clause (a)(v) is uncertain as the provisions do not currently identify significant areas of vegetation, nor does it reflect the protection required by Policy 14 [Indigenous biodiversity] of the Plan.</p> <p>The Hearing Panel recommends granting relief in relation to Policy 8 (submission point 328) and consider this relief to address the first part of the submitters concern in Policy 9. As a result, Policy 8(a) is recommended to be amended to not limit its application only to the effects of activities in values and characteristics <u>identified</u> in Schedule 2.</p> <p>The Hearing Panel further recommends amending Policy 9 (a)(v) as requested by the submitter as the suggestion is more directive and aligns language to that used elsewhere in the Plan.</p> <p>At the hearing of submissions, the submitter indicated that the relief proposed addressed some of their concerns but that further amendments are required to better align with the <i>New Zealand Coastal Policy Statement</i>, particularly in relation to 'high natural character' areas. The Hearing Panel agrees and recommends that Policy 9 be amended to include a new clause that reads as follows:</p> <p><u>(ix) in areas of high natural character in the coastal marine area, minimises to the extent practicable, seabed and foreshore disturbances and modifications, placement of structures, and discharges of contaminants.</u></p>

NEW Policy 9A – Criteria for identifying areas of outstanding or high natural character			
43 – Royal Forest and Bird Protection Society	348	Amend Submitter seeks amendment to the Plan to include a new Policies that: <ul style="list-style-type: none"> • determines/identifies areas of Outstanding Natural Character • to preserve areas of High Natural Character • for other natural character in all areas of the coastal environment • to provide a basis for determining outstanding natural features and landscapes • other natural features and landscapes in all areas of the coastal environment. 	Grant in kind The Hearing Panel does not believe the requested amendment is necessary. Of note, the Council has worked closely with the New Plymouth and South Taranaki district councils in identifying, mapping and describing natural character, features and landscapes along the Taranaki coastline. Much of this work was addressed in a separate report <i>Regional Landscape Study of the Taranaki Coastal Environment</i> , which was prepared and consulted on as part of the Coastal Plan review. It was this work, which was used for determining and identifying outstanding natural features and landscapes but also examined natural character across the entirety of the Taranaki coastline. The Hearing Panel further notes that the Plan already contains policies addressing the protection of natural character, features and landscapes (Policies 8, 9 and 10) and do not believe additional policies are necessary or appropriate. All General Policies apply to any use and development activities in the coastal marine area and must be read together. At the hearing, the submitter supported some of the changes proposed by officers to address some of their concerns but strongly advocated for the inclusion of mapped areas of 'high natural character' in addition to amendments to Policy 9. The Hearing Panel agrees and recommends that Policy 9 be amended as previously discussed in submission point 343. The Hearing Panel further recommends granting the submitter relief in kind by amending relevant planning maps to identify those areas already identified in the Plan as having high (or higher) natural character in the coastal marine area - these being outstanding areas and estuaries unmodified, i.e: <ul style="list-style-type: none"> • Whitecliffs • Mimi Estuary • Paritutu • Ngā Motu (Sugar Loaf Islands) • Tapuae • Hangatahua River • Oaonui (Sandy Bay) • Kaupokonui

		Retain Policy 10 of the Plan as notified.	Support noted. Policy 10 is retained as notified.
49 – Cam Twigley	353	Amend	No relief necessary
		Submitter seeks amendment to Policy 10 of the Plan to include the restoration and rehabilitation of natural character within the Significant Surfing Area.	No precise details of amendments sought to Policy 10 have been provided. However, the Hearing Panel suggests that Policy 10 does not need the level of specificity sought by the submitter and through this Plan (but also through other planning mechanisms) opportunities already exist to investigate supporting the restoration and rehabilitation of natural character within the Significant Surfing Area. Policy 10 recognises that the natural character of parts of the coastal environment may be degraded and seeks to provide for the restoration or rehabilitation of the coast where this appropriate. Sensitive or vulnerable coastal habitat types have been highlighted. Rules and other (non regulatory) methods will be used to implement the Policy.
Policy 11 – Coastal water quality			
6 – Trans-Tasman Resources Ltd	354	Amend	Accept in part
		The submitter questions the practical application of how to maintain and enhance coastal water quality at the same time and seeks to amend Policy 11 of the Plan to read: <i>Maintain or and enhance coastal water quality by avoiding, remedying and mitigating the adverse effects of activities on [...]</i>	The Hearing Panel agrees but recommends an additional relief to that requested by the submitter whereby Policy 11 is amended to specify and limit the circumstances where coastal water quality will be maintained or enhanced. The revised Policy reads as follows: <i>Maintain <u>coastal water quality where it is good or</u> enhance coastal water quality <u>where it is degraded</u> by avoiding, remedying and mitigating the adverse effects of activities on: [...]</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
60 – Te Kaahui o Rauru	362	<p>Amend</p> <p>Submitter seeks amendment to Policy 11 of the Plan to include native species of value to Māori.</p>	<p>Decline</p> <p>The Hearing Panel does not recommend amending Policy 11 of the Plan to expand its scope to reference native species of value to Māori. Presence or abundance of native species are not necessarily a meaningful indicator of coastal water quality with some taonga species being quite tolerant of reduced water quality.</p> <p>The Hearing Panel notes Schedule 3 of the Plan identifies areas where there is localised degradation of water quality, which (through Policy 12) will be targeted for enhancement. Of note these 'degraded areas' do contain native species of value to Māori, including shellfish. The issue is not the presence or abundance of these species but <i>E. coli</i> levels are such that there are restrictions on the harvesting of these species.</p> <p>The Hearing Panel further notes that all General Policies need to be read together and that other policies and recommended changes to the Plan may address some of the issues of concern. Native species, including species of value to Māori, are implicitly provided for in Policy 11 in that avoiding, remedying and mitigating adverse effects of activities on the life supporting capacity of coastal water, the māuri and wairua of coastal water and the integrity and functioning of natural coastal processes will contribute to the maintenance and enhancement of native species of value to Māori. Native species are also covered by Policy 14 [Indigenous biodiversity] and Policy 15 [Historic heritage]. Hearing Panel are further recommending that a new Policy 14B be included in the Plan to recognise and provide for the maintenance and enhancement of taonga species. In giving effect to the Plan all General Policies and relevant Activity-specific policies must be read together.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	363	<p>Amend</p> <p>Submitter seeks amendment to Policy 11 of the Plan to read:</p> <p><i>Policy 11: Coastal water quality and mauri values</i></p> <p><i>Maintain and enhance coastal water quality and mauri values by avoiding, remedying and mitigating the adverse effects of activities on:</i></p> <p><i>[...]</i></p> <p><i>(a) the mauri or life-supporting capacity of coastal water;</i></p>	<p>No relief necessary</p> <p>The Hearing Panel notes that māuri values are already addressed within the Policy in Clause (b) and that it is not necessary to repeat the reference as the Policy is already clearly identifying māuri to be a component of coastal water quality. The Hearing Panel considers that no further relief is necessary.</p>

Ngāruahine Trust (41), Te Atiawa (58)			
NEW Policy 11A – Water quality limits			
43 – Royal Forest and Bird Protection Society	364	Amend Submitter seeks amendment to the Plan to include a new Policy 11A [Coastal water quality limits] to achieve Objective 5 [Coastal water quality]. The new Policy would set water quality targets and standards for freshwater and coastal water in the coastal environment to ensure that upstream water quality does not result in adverse effects in the coastal environment.	Decline The submitter does not specify what attributes and numerics would be acceptable for coastal water quality and marine health. The Hearing Panel notes Council concerns that the adoption of standardised and universal water quality targets and standards would have a perverse outcome in that such targets are likely to be too high or too low depending upon uses and values in the locality. Such matters are best dealt with through the consenting process where the type, scale and significance of the activity and the vulnerability and sensitivities of the receiving environment (including cultural interests), and an appropriate mixing zone may be considered on a case-by-case basis. The Council's approach involves taking into account recognised national/international guideline values as appropriate. The Hearing Panel notes that Taranaki only has seven major municipal and/or industrial discharges to the coastal marine area and that coastal water quality is generally good. In localities where that is not the case, a new Policy 12 has been included in the Plan seeking the restoration of local coastal water quality.

Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose in part	
Policy 12 – Restoration of coastal water quality			
15 – Surfbreak Protection Society	365	Amend The submitter believes that Policy 12 does not provide adequate protection of the awa and coastal areas. The submitter is concerned that waiting until there are significant effects could impact on shellfish gathering, cultural activities, and water based recreational activities and seeks that the word “ <i>significant</i> ” be deleted from the policy.	Decline The Hearing Panel notes that pursuant to the RMA, the Council will, as a minimum be maintaining Taranaki's generally high coastal water quality. Any activity may have an adverse effect on water quality but, for most activities, their effects are localised or temporal and/or effects can be mitigated. Policy 12 is a new policy that seeks to restore coastal water quality where it has been degraded. It recognises localised adverse effects where there is <u>already</u> significant adverse effect on coastal ecosystems, natural habitats or water based recreational activities, or is restricting existing uses such as shellfish gathering and cultural activities (these areas are identified in Schedule 3). The use of the term “ <i>significant</i> ” is deliberate and appropriate and provides context to where restoration will be promoted. It is also consistent with national directions set out in Policy 21 of the <i>New</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>Zealand Coastal Policy Statement</i> . The Hearing Panel recommends retaining Policy 12 as notified.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	366	Support Retain Policy 12 of the Plan as notified.	Accept Support noted. Policy 12 is retained subject to minor amendment as requested by another submitter that do not change the policy intent.
Further submissions – Port Taranaki Ltd (32)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	367	Amend Submitter seeks amendment to Policy 12 of the Plan to read: <i>Policy 12: Restoration of coastal water quality <u>and mauri values</u>.</i>	No relief necessary It is the Hearing Panel's understanding that each iwi, hapū or whanau may have their own concept of māuri. However, the term is generally understood to be the life principle, life force, vital essence, special nature, a material symbol of a life principle, source of emotions – the essential quality and vitality of a being or entity. The term may also refer to a physical object, individual, ecosystem or social group in which the essence is located. The Hearing Panel has concerns that introducing the term “māuri” and making it a policy requirement to restore māuri (and māuri possibly being something different from water quality) reduces certainty and clarity in respect of its application. The Hearing Panel further suggests that the relief sought is not necessary in that the term “māuri” is used elsewhere in the Plan's policy framework with all General Policies needing to be read together. Policy 13 is a specific policy that, in line with the <i>New Zealand Coastal Policy Statement</i> , is seeking to promote the restoration of coastal water quality in areas (identified in Schedule 3) where degraded water quality has resulted in restrictions to existing uses such as shellfish gathering and cultural activities. Under Policy 11 [Coastal water quality] the constituent parts of coastal water quality include the life supporting capacity, <u>māuri</u> , wairua of water and more. Therefore, Policy 12 already addresses māuri as part of the restoration of coastal water quality.

Policy 14 Indigenous biodiversity			
6 – Trans-Tasman Resources Ltd	370	Amend	Decline
		<p>Submitter seeks amendment to Policy 14 of the Plan to read:</p> <p><i>Protect areas of significant indigenous biodiversity in the coastal environment and maintain and enhance indigenous biodiversity by:</i></p> <p><i>(a) avoiding adverse effects of activities on:</i></p> <p><i>(i) indigenous taxa that are nationally threatened or at risk (declining), or regionally distinctive, including those identified in Schedule 4A;</i></p> <p><i>(ii) taxa that are internationally threatened including those identified in Schedule 4A;</i></p> <p><i>(iii) indigenous ecosystems and vegetation types that are threatened in the coastal environment, or are naturally rare, as identified in Schedule 4A;</i></p> <p><i>(iv) habitats of indigenous species where the species are at the limit of their natural range, or are naturally rare;</i></p> <p><i>(v) areas containing nationally significant examples of indigenous community types; and</i></p> <p><i>(vi) areas set aside for full or partial protection of indigenous biological diversity under other legislation; and</i></p>	<p>The submitter believes there are issues between the Schedules and Policy 14 that sets out to avoid significant adverse effects and avoid, remedy or mitigate other effects on ecosystems and habitats set out in Schedule 4B. However, the submitter does not specify what these issues are.</p> <p>The relief sought involves amending Policy 14 of the Plan and has four parts:</p> <ul style="list-style-type: none"> Reference to 'at risk' taxa in Clause (a)(i) to be confined to 'at risk (declining) taxa: <p>The Hearing Panel does not recommend granting this relief as it would be inconsistent with Policy 11(a)(i) of the <i>New Zealand Coastal Policy Statement</i>, which requires activities to avoid adverse effects on indigenous taxa listed as 'at risk' in the New Zealand Threat Classification System lists. According to that list 'at risk' taxa can be further categorised as 'declining', 'recovering', 'relict' and 'naturally uncommon'. All four categories of 'at risk' taxa are appropriately captured by the Policy as currently notified.</p> <ul style="list-style-type: none"> Delete reference in Clause (a) to 'regionally distinctive' taxa:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(b) avoiding significant adverse effects and avoiding, remedying and mitigating other adverse effects of activities on:</p> <p>(i) areas of predominantly indigenous vegetation in the coastal environment;</p> <p>(ii) habitats in the coastal environment that are important during the vulnerable life stage of indigenous species including:</p> <p>i. estuaries;</p> <p>ii. spawning areas (e.g. snapper-trevally spawning area in the North Taranaki Bight between Mōhakatino River and Pariokariwa Point);</p> <p>iii. areas that provide passage for diadromous species;</p> <p>iv. marine mammal resting, feeding and breeding areas; and</p> <p>v. bird roosting and nesting areas;</p> <p>(iii) indigenous ecosystems and habitats found only in the coastal environment and which are particularly vulnerable to modification including estuaries, lagoons, coastal wetlands, dunelands, intertidal zones, rocky reef systems, eelgrass, <u>and saltmarsh areas; and sensitive marine benthic habitats as identified in Schedule 4B;[...]</u></p>	<p>The Hearing Panel does not recommend granting this relief as it would be inconsistent with Bio Policy 4 of the <i>Regional Policy Statement</i>, which refers to, amongst other things, the presence of regionally distinctive species as a criteria for identifying significant indigenous biodiversity values in Taranaki. The category also contributes to giving effect to Policy 11(a)(iv) of the <i>New Zealand Coastal Policy Statement</i>. It is the Hearing Panel's view that Policy 14 should recognise the local context and provide for the protection of indigenous species that are locally significant to the Taranaki region, irrespective of their national threat status.</p> <ul style="list-style-type: none"> Delete reference to 'naturally rare' ecosystems and vegetation types: The Hearing Panel does not recommend granting this relief as it would be inconsistent with Policy 11(a)(iii) of the <i>New Zealand Coastal Policy Statement</i>, which requires activities to avoid adverse effects on indigenous ecosystems and vegetation types that are "naturally rare". Delete reference in Clause (b)(iii) to "sensitive marine benthic habitats": The Hearing Panel recommends declining the relief sought. Sensitive benthic habitats refer to marine habitats identified in the report https://www.trc.govt.nz/assets/Documents/Plans-policies/CoastalPlanReview/SensitiveHabitats.PDF that have low tolerance to habitat damage and for which the time for the habitat to recover from any damage would be significant. Given the sensitivity and vulnerability of such marine habitats, the Hearing Panel considers it appropriate that they be recognised and provided for in Policy 14(b)(iii) of the Plan.

Grant in kind The relief sought by the submitter would have the perverse outcome of derogating from the relationship of tangata whenua culture, values and traditions with the coastal environment. Given the importance of some of these species as mahinga kai, their inclusion in Policy 14 (with its strong avoidance direction) would potentially preclude/restrict any activity (such as harvesting) that has adverse effects on their populations, abundance and distribution. The Hearing Panel therefore recommends an alternative relief that provides for strong recognition and provision for taonga species. It is recommended that a new Policy 14B be included to ensure activities avoid, remedy or mitigate adverse effects on taonga species. It is further recommended that a definition for taonga species be provided and a new schedule included to identify taonga species. The new Policy 14B would read as follows: <u>Policy 14B: Taonga species</u> <u>Maintain or enhance taonga species as identified in Schedule 4C by:</u> <u>(a) avoiding significant adverse effects of activities on the habitat of taonga species, mahinga kai, tāiapure or mataitai and customary uses and values unless:</u> <u>the activity is necessary for the provision of regionally important infrastructure, avoidance of adverse effects is not practicable and adverse effects are remedied or mitigated to the extent practicable; and</u> <u>(b) avoiding, remedying or mitigating other adverse effects of activities on taonga species habitat, mahinga kai, tāiapure or mataitai.</u> The definition for “Taonga species” would read as follows: <u>Taonga species means the species of birds, plants and animals identified as such by treaty settlements and described in Schedule 4C.</u>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
42 – Ngāti Rahiri Hapū	379	Other Submitter seeks clarification as to whether shellfish and crayfish, and the habitat for both, are protected by Policy 14 of the Plan.	No relief necessary The Hearing Panel notes that significant indigenous biodiversity protected in Policy 14 are identified in Schedule 4A. While shellfish and crayfish are not identified in that Schedule as threatened, at risk or regionally distinctive species (and as defined by the Plan) they are nevertheless protected under Policy 14. Of particular note, the primary habitats of these species are largely reefs, which have a very high level of protection in the Plan compared with other marine habitats.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>The Hearing Panel notes however that, in response to reliefs sought by other submitters, other changes are proposed to the Plan to better recognise and protect taonga species. The Hearing Panel recommends amending the Plan to include a new Policy 4B to ensure activities avoid, remedy or mitigate adverse effects on taonga species. It is further recommended that a definition for taonga species be provided and a new schedule included to identify taonga species that may include shellfish and crayfish.</p> <p>The new Policy 14B would read as follows:</p> <p><u>Policy 14B: Taonga species</u></p> <p><u>Maintain or enhance taonga species as identified in Schedule 4C by:</u></p> <p><u>(a) avoiding significant adverse effects of activities on the habitat of taonga species, mahinga kai, tāiapure or mataitai and customary uses and values unless:</u></p> <p><u>the activity is necessary for the provision of regionally important infrastructure, avoidance of adverse effects is not practicable and adverse effects are remedied or mitigated to the extent practicable; and</u></p> <p><u>(b) avoiding, remedying or mitigating other adverse effects of activities on taonga species habitat, mahinga kai, tāiapure or mataitai.</u></p> <p>The definition for "Taonga species" would read as follows:</p> <p><u>Taonga species means the species of birds, plants and animals identified as such by treaty settlements and described in Schedule 4C.</u></p>
43 – Royal Forest and Bird Protection Society	380	<p>Amend</p> <p>Submitter seeks amendment to Policy 14 of the Plan by removing reference to "maintaining and enhancing indigenous biodiversity" so that it sets out the characteristics and values to be protected under Policy 11 of the <i>New Zealand Coastal Policy Statement</i></p> <p>AND</p> <p>Include a separate policy for the maintenance and enhancement of indigenous biodiversity in the coastal environment</p> <p>AND</p> <p>Include guidance on relevant habitats under Clause (a)(iv).</p>	<p>Accept in part</p> <p>The Hearing Panel recommends largely granting the reliefs sought by the submitter. Policy 14 is directly aligned with Policy 11 [Indigenous biodiversity] of the <i>New Zealand Coastal Policy Statement</i>. Although the matters covered in Policy 14 cover most aspects of indigenous biodiversity, the submitter, quite rightly, points out that indigenous biodiversity is much broader than those aspects highlighted in Policy 14. The Hearing Panel therefore recommends amending the Plan to include a separate stand-alone policy to address the remaining aspects of indigenous biodiversity not otherwise covered by Policy 14.</p> <p>The new Policy 14A would read as follows:</p> <p><u>Policy 14A: Indigenous biodiversity</u></p> <p><u>Maintain or enhance indigenous biodiversity generally in the coastal environment by:</u></p> <p><u>(a) as far as is practicable, avoiding, remedying and mitigating the adverse effects of activities on indigenous biodiversity; and</u></p>
Further submissions – Powerco (45)		Oppose in part	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p><u>(b) when assessing adverse effects on indigenous biodiversity, having regard to the extent of effects, including consideration of:</u></p> <p><u>(i) the association of the ecological site and values with other interrelated, but not necessarily contiguous, ecological sites and values;</u></p> <p><u>(ii) the nature, location, extent and design of the proposed development and the effects of these factors on indigenous biodiversity;</u></p> <p><u>(iii) the degree to which indigenous biodiversity values will be lost, damaged, destroyed, or enhanced, recognising that:</u></p> <p><u>i. the scale of the effect of an activity is proportional to the size and sensitivity of the ecological area and associated indigenous biodiversity values;</u></p> <p><u>ii. discrete, localised or otherwise minor effects not impacting on the ecological area may be acceptable; and</u></p> <p><u>iii. activities with transitory effects may be acceptable, where they can demonstrate the effects are not long-term and/or irreversible.</u></p> <p>In relation to adding guidance in the Plan on relevant habitats under Clause (a)(iv), habitats of indigenous species where the species are at the limit of their natural range, or are naturally rare. The Hearing Panel does not believe this level of specificity is necessary or appropriate for a regulatory plan. While the Council contains some information on the distribution and abundance of some indigenous biodiversity species, currently such information is generally fragmented and incomplete. The Hearing Panel suggests that such guidance more appropriately sits outside a Plan so that it can be easily developed and amended over time as better information is gathered.</p> <p>At the hearing, the submitter sought additional amendments to Policy 14 to include a new Clause (c) that refers to controlling the effects of activities in significant marine animal and seabird areas consistent with Policy 14(a) and (b) of the notified Plan. The Hearing Panel agrees that these areas require special mention and that clauses (a) and (b) may apply depending. The Panel recommends amending Policy 14 to include a new clause that reads as follows:</p> <p><u>(c) avoiding, remedying or mitigating the adverse effects of activities in significant marine animal and seabird areas consistent with (a) and (b) above.</u></p>
43 – Royal Forest and Bird Protection Society	381	<p>Amend</p> <p>Submitter seeks amendment to Policy 14 of the Plan or add a new policy to identify areas of significant indigenous biodiversity including criteria for determination.</p>	<p>Decline</p> <p>The submitter when presenting at the hearing supports the Council being able to identify 'significant indigenous biodiversity' areas through resource consent processes</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>At the hearing, the submitter further submitted on this point and sought the addition of a new clause to identify areas of significant indigenous biodiversity based upon a new appendix setting out suggested 'significance' criterion.</p>	<p>and through any future surveys and assessment processes. The Hearing Panel believes the Council can already do this through its current policy framework.</p> <p>The Hearing Panel notes that BIO Policy 4 of the <i>Regional Policy Statement</i> already provides the relief sought by the submitter. BIO Policy 4 reads:</p> <p><i>"When identifying ecosystems, habitats and areas with significant indigenous biodiversity values, matters to be considered will include:</i></p> <p><i>(a) the presence of rare or distinctive indigenous flora and fauna species; or</i></p> <p><i>(b) the representativeness of an area; or</i></p> <p><i>(c) the ecological context of an area.</i></p> <p><i>Once identified as significant, consideration should be given to the sustainability of the area to continue to be significant in future when deciding on what action to be taken (if any) should reasonably and practicably be taken to protect the values of the area."</i></p> <p>The above criteria adopted in the <i>Regional Policy Statement for Taranaki</i> for identifying significant indigenous biodiversity has been effective as demonstrated by the Council's significant involvement and success in promoting passive and active protection of terrestrial, freshwater and marine sites identified as having regionally significant values.</p> <p>The Hearing Panel does not believe it is necessary for all regional plans to repeat policies set out in other planning instruments and indeed there are risks in unnecessarily paraphrasing other policy instruments (of note the criterion suggested by the submitter in their Appendix is based upon proposals relating to a proposed <i>National Policy Statement for Indigenous Biodiversity</i> that has not even been consulted on yet).</p> <p>The Hearing Panel suggest that 'criterion' type policies be left for inclusion in the <i>Regional Policy Statement for Taranaki</i>, which both regional and district plans must then give effect to. The Hearing Panel notes that the <i>Regional Policy Statement</i> is due to be reviewed in 2020 and it would be timely to review its 'significance criteria' taking into account the submitter's suggestions and any new Government directions such as a proposed <i>National Policy Statement for Indigenous Biodiversity</i>. The Hearing Panel recommends the inclusion of a new Implementation Method that commits the Council to this course of action. The new Implementation Method (section 6.2) 8B would read as follows:</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<u>Review and, if necessary, amend the Regional Policy Statement for Taranaki to set out criteria for assessing the significance of natural character, natural features and landscapes, and indigenous biodiversity.</u>
43 – Royal Forest and Bird Protection Society	382	<p>Amend</p> <p>The submitter is concerned that Policy 14(a)(iii) is not broad enough or will not allow for protection of ecosystems or vegetation that may be identified as threatened or naturally rare at a later date. Submitter seeks an amendment to Policy 14(a)(iii) of the Plan to read:</p> <p><i>Protect areas of significant indigenous biodiversity in the coastal environment and maintain and enhance indigenous biodiversity by:</i></p> <p><i>(a) avoiding adverse effects of activities on: [...]</i></p> <p><i>(iii) indigenous ecosystems and habitats found only in the coastal environment and which are particularly vulnerable to modification including estuaries, lagoons, coastal wetlands, dunelands, intertidal zones, rocky reef systems, eelgrass, saltmarsh, and sensitive marine benthic habitats as, including those identified in Schedule 4B; [...]</i></p>	<p>No relief necessary</p> <p>The relief sought is unnecessary as the Policy already notes that the listed types are not an exclusive list.</p> <p><i>iii) indigenous ecosystems and habitats found only in the coastal environment and which are particularly vulnerable to modification including [emphasis added] estuaries, lagoons, coastal wetlands, dunelands, intertidal zones, rocky reef systems, eelgrass, saltmarsh, and sensitive marine benthic habitats as identified in Schedule 4B; [...]</i></p>
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
43 – Royal Forest and Bird Protection Society	383	<p>Other</p> <p>Submitter comments that Policy 14 of the Plan is unclear about how Clause (a) (<i>avoiding adverse effects of activities on: [...]</i>) and clause (b) (<i>avoiding significant adverse effects and avoiding, remedying and mitigating other adverse effects of activities on; [...]</i>) will be achieved to give effect to the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>No relief necessary</p> <p>The Hearing Panel notes that the means for achieving all of the policies are set out under the methods section and/or the rules. In particular, methods relating to indigenous biodiversity are explicitly covered in Methods 13 to 20 and also more broadly within the entire Methods section of the Plan. Rules also apply that prohibit or restrict activities where they impact on indigenous biodiversity.</p> <p>The Hearing Panel further notes that these issues are also covered within the methods of implementation within the indigenous biodiversity section of the <i>Regional Policy Statement for Taranaki</i> and again in the <i>Biodiversity Strategy for the Taranaki Regional Council</i>. The Hearing Panel therefore believes that this issue is addressed sufficiently within the Plan and also within the <i>Regional Policy Statement</i>.</p>
	384	Other	No relief necessary

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd		Submitter seeks that the Council ensure Policy 14 of the Plan and corresponding rules provide appropriately for the operation, maintenance and upgrade of existing regionally important infrastructure.	Comments noted. The Hearing Panel notes that all the General Policies (and relevant Activity-specific Policies) need to be read together, which includes considering Policies 5 [Use and development] and 6 [Regionally important infrastructure] of the Plan alongside biodiversity considerations set out in Policy 14.
47 – Fonterra	385	Support	Accept
		Retain Policy 14 as notified.	Support noted. Policy 14 is retained subject to minor amendments as requested by other submitter that do not change the policy intent.
58 – Te Atiawa	386	Amend	Grant in kind
		Submitter seeks amendment to Policy 14(a) of the Plan to include a new clause to read: <i>Protect areas of significant indigenous biodiversity in the coastal environment and maintain and enhance indigenous biodiversity by:</i> <i>(a) avoiding adverse effects of activities on [...]</i> <i>(vii) Taonga species as identified by tangata whenua [...]</i>	The relief sought by the submitter would have the perverse outcome of derogating from the relationship of tangata whenua culture, values and traditions with the coastal environment. Given the importance of some of these species as mahinga kai, their inclusion in Policy 14 (with its strong avoidance direction) would potentially preclude/restrict customary activities (such as harvesting) that has adverse effects on their populations, abundance and distribution. The Hearing Panel therefore recommends an alternative relief that provides for strong recognition and provision for taonga species. It is recommended that a new Policy 14A be included to ensure activities avoid, remedy or mitigate adverse effects on taonga species. It is further recommended that a definition for taonga species be provided and a new schedule included to identify taonga species. The new Policy 14B would read as follows: <u><i>Policy 14B: Taonga species</i></u> <u><i>Maintain or enhance taonga species as identified in Schedule 4C by:</i></u> <u><i>(a) avoiding significant adverse effects of activities on the habitat of taonga species, mahinga kai, tāiapure or mataitai and customary uses and values unless:</i></u> <u><i>the activity is necessary for the provision of regionally important infrastructure, avoidance of adverse effects is not practicable and adverse effects are remedied or mitigated to the extent practicable; and</i></u> <u><i>(b) avoiding, remedying or mitigating other adverse effects of activities on taonga species habitat, mahinga kai, tāiapure or mataitai.</i></u> The Hearing Panel also recommend amending the Plan to include a definition for "Taonga species" to read:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<u><i>Taonga species means the species of birds, plants and animals identified as such by treaty settlements and described in Schedule 4C.</i></u>
58 – Te Atiawa	387	Amend Submitter seeks amendment to Policy 14 to of the Plan include a new clause (c) that reads: <i>Protect areas of significant indigenous biodiversity in the coastal environment and maintain and enhance indigenous biodiversity by: [...]</i> <u><i>(c) recognising and providing for the role of tangata whenua as kaitiaki, when identifying and managing significant areas of indigenous biodiversity in the coastal area.</i></u>	Grant in kind The Hearing Panel does not recommend granting the relief noting that it relates to a framework setting out tiered protection of indigenous biodiversity rather than identifying particular relationships for implementing the policy. The Hearing Panel notes that the relief proposed only addresses the role of tangata whenua as kaitiaki and is silent on the role of others parties who may also have a significant involvement and/or interest in indigenous biodiversity protection. Rather than making changes to Policy 14, the Hearing Panel recommends an alternative relief that may partially give effect to the submitters wish for the role of tangata whenua as kaitiaki to be recognised. The Hearing Panel recommends minor amendment to Policy 16 to explicitly recognise for the role of tangata whenua as kaitiaki across all aspects of managing use, development and protection in the coastal environment (rather than just biodiversity). The Hearing Panel notes that all General Policies (and relevant Activity-specific Policies) must be read together. The amendment to Policy 16 would read as follows: <i>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment, <u>including the role of tangata whenua as kaitiaki</u>, and take into account the principles of the Treaty of Waitangi.</i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
60 – Te Kaahui o Rauru	388	Amend Submitter seeks amendment to Policy 14 of the Plan to include native species of value to Māori.	Grant in kind The relief sought by the submitter would have the perverse outcome of derogating from the relationship of tangata whenua culture, values and traditions with the coastal environment. Given the importance of some of these species as mahinga kai, their inclusion in Policy 14 (with its strong avoidance direction) would potentially preclude/restrict customary activities (such as harvesting) that has adverse effects on their populations, abundance and distribution. The Hearing Panel therefore recommends an alternative relief that provides for strong recognition and provision for taonga species. It is recommended that a new Policy 14B be included to ensure activities avoid, remedy or mitigate adverse effects on taonga species. It is further recommended that a definition for taonga species be provided and a new schedule included to identify taonga species. The new Policy 14B would read as follows:

Further submissions – Trans-Tasman Resources Ltd (6)		<p>Oppose</p>	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p><u>(b) avoiding, remedying or mitigating other adverse effects of activities on taonga species habitat, mahinga kai, tāiapure or mataitai.</u></p> <p>The Hearing Panel also recommend amending the Plan to include a definition for "Taonga species" to read:</p> <p><u>Taonga species means the species of birds, plants and animals identified as such by treaty settlements and described in Schedule 4C.</u></p>
Policy 15 – Historic heritage			
2 – Federated Farmers	390	<p>Amend</p> <p>Submitter seeks that historic heritage sites should be accurately mapped to give certainty and that normal farming activities are recognised as co-existing with heritage values and enabled to continue.</p>	<p>No relief necessary</p> <p>The submitter's comments have been noted. However, the Hearing Panel does not believe any relief is necessary. Historic heritage sites, in or adjoining the coastal marine area, have been mapped where possible. In many cases accurate mapping of historic heritage on the seabed is not possible.</p>
20 – Meridian Energy Ltd	391	<p>Amend</p> <p>Submitter seeks amendment to Policy 15 of the Plan to read:</p> <p><i>Protect historic heritage in the coastal environment from inappropriate <u>subdivision</u>, use and development by: [...]</i></p>	<p>Accept</p> <p>The submitter wishes to include "subdivision" within Policy 15 to be consistent with Policy 15 [Natural features and natural landscapes] of the <i>New Zealand Coastal Policy Statement</i>. The Hearing Panel notes that subdivision falls outside the statutory functions of regional councils and is instead the responsibility of district and unitary councils pursuant to Section 31 of the RMA. However, for the purpose of integrated management, the Hearing Panel recommends amending Policy 15 to include reference to subdivision. This relief is similar in kind to other reliefs sought by the submitter whereby Objective 11 [Cultural and historic heritage] has been amended to reference subdivision.</p> <p>A new definition for "subdivision" is also recommended.</p>
40 – Te Rūnanga o Ngāti Mutunga	392	<p>Amend</p> <p>Submitter wishes to see a greater level of protection within Policy 15(b) of the Plan by removing the word "significant" to read:</p> <p><i>Protect historic heritage in the coastal environment from inappropriate use and development by: [...]</i></p> <p><i>(b) avoiding significant adverse effects and avoiding, remedying and mitigating other adverse effects on the [...]</i></p>	<p>Decline</p> <p>The level of protection that Policy 15(b) provides sites of significance to Māori is considered appropriate by Hearing Panel. Policy 15(b) represents a high level of protection but does allow activities that have less than minor adverse effects and/or where the effects maybe transitory. Granting the relief sought by the submitter by deleting the term "significant" would make the Policy unnecessarily broad and prohibitive.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	Of note, the relief sought by the submitter would also have the perverse outcome of derogating from the relationship of tangata whenua culture, values and traditions with the coastal environment. For example, sites of significance to Māori identified in Schedule 5B of the Plan include a large number of kaimoana sites. Granting the relief sought, where all effects must be avoided, would potentially preclude/restrict customary activities (such as harvesting).
41 – Te Korowai o Ngāruahine Trust	393	Amend Submitter seeks amendment to Policy 15(d) of the Plan to specifically recognise the role of kaitiaki and mātauranga supplied by tangata whenua/mana whenua and their experts.	Grant in kind The Hearing Panel does not recommend granting the relief as proposed by the submitter. The Hearing Panel notes that Policy 15 sets out a framework for the tiered protection of historic heritage. Policy 15(d) already referring to the outcomes of consultation with relevant bodies or individuals, including local iwi and hapū. Amending the Policy to include an amended Clause, focusing on the roles of one organisations or stakeholder group (while remaining silent on other relevant organisations and groups) is not considered appropriate or necessary. Rather than making changes to Policy 15, the Hearing Panel recommends an alternative relief that may partially give effect to the submitter's wish for the role of tangata whenua as kaitiaki to be recognised. The Hearing Panel recommends minor amendment to Policy 16 to explicitly recognise for the role of tangata whenua as kaitiaki across all aspects of managing use, development and protection in the coastal environment (rather than just historic heritage). The Hearing Panel notes that all General Policies (and relevant Activity-specific Policies) must be read together. The Hearing Panel further recommends other consequential changes to the methods of the Plan that incorporate the concept of mātauranga Māori based methods or cultural indicators into resource consent conditions.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
45 – Powerco	394	Support Retain Policy 15 of the Plan as notified.	Accept Support noted. Policy 15 is retained subject to minor amendment as requested by another submitter that does not change the policy intent.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	395	Support Retain Policy 15 of the Plan as notified.	Accept Support noted. Policy 15 is retained subject to minor amendment as requested by another submitter that does not change the policy intent.
Further submissions – Port Taranaki Ltd (32)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
57 – Heritage new Zealand	396	Support Retain Policy 15 of the Plan as notified.	Accept Support noted. Policy 15 is retained subject to minor amendment as requested by another submitter that does not change the policy intent.
58 – Te Atiawa	397	Amend Submitter seeks amendment to Policy 15(b) of the Plan to read: <i>Protect historic heritage in the coastal environment from inappropriate use and development by: [...]</i> [...] <i>(b) avoiding significant adverse effects and avoiding, remedying and mitigating other adverse effects on the associated values with sites of significance to Māori identified in Schedules 5A.</i>	Decline The Hearing Panel recommends declining the relief sought. The relief sought would potentially restrict all activities in or near Māori sites of significant, even if such activities would only have minor or transitional effects. See above response to Te Rūnanga o Ngāti Mutunga for additional details and considerations (submission point 392).
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
58 – Te Atiawa	398	Amend Submitter seeks amendment to Policy 15(d) of the Plan to include a new Clause (x) that reads: <i>Protect historic heritage in the coastal environment from inappropriate use and development by:</i> [...] <i>(d) when assessing adverse effects on historic heritage, giving regard to the extent of effects, including consideration of:</i> [...] <i><u>(x) evidence supplied by tangata whenua including that of kaumatua and pukenga.</u></i>	No relief necessary The Hearing Panel further notes that Policy 15(d)(viii) and (ix) already refer to assessments of adverse effects on historic heritage taking into consideration any investigations and documentation of the site and the outcome of consultation with iwi and hapū, which could include evidence supplied by kaumatua and pukenga. Amending the Policy to include a new Clause, focusing on one potential source of information, is not considered necessary. At the hearing, the submitter noted concern for sites not scheduled in the Plan and considers that Policy 15(d) and (e) do not provide sufficient protections for unscheduled sites. The Hearing Panel recognises the concern of the submitter, but notes Council's efforts to identify all known sites of significance in the Plan's schedules. Inevitably over the life of the Plan new sites may be identified. These 'new' sites may be included in the schedules through a plan change. In the interim, Policy 15(c) and (d) will apply.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	399	Amend Submitter seeks amendment to Policy 15 of the Plan to read: <i>Policy 15: <u>Cultural and</u> Historic heritage</i>	Decline The Hearing Panel does not consider it necessary or appropriate to include reference to "cultural" alongside "Historic heritage". Historic heritage has a broad definition

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>Protect <u>cultural and</u> historic heritage in the coastal environment from inappropriate use and development by:</p> <p>(a) avoiding adverse effects on the values associated with Category A archaeological sites of significance and <u>cultural and</u> historic areas identified in Schedule 5A <u>and GIS map layer #</u>;</p> <p>(b) avoiding significant adverse effects, and avoiding, remedying and mitigating other adverse effects on the values associated with <u>cultural heritage</u> sites of significance to Māori identified in Schedules 5A and 5B <u>and GIS map layer #</u>;</p> <p>(c) avoiding, remedying or mitigating adverse effects on the values associated with all other <u>cultural and</u> historic heritage sites, including those identified in Schedule 5 <u>and GIS map layer #</u> and those identified by New Zealand Archaeological Association's ArchSite (Archaeological Site Recording Scheme) <u>and tangata whenua</u>;</p> <p>(d) when assessing adverse effects on <u>cultural and</u> historic heritage, giving regard to the extent of effects, including consideration of:</p> <p>i. the association of the site with other interrelated, but not necessarily contiguous, cultural and historic heritage sites and their collective significance in the context of historic landscapes and areas;</p> <p>ii. the degree to which <u>cultural and</u> historic heritage values will be lost, damaged, destroyed, or enhanced;</p> <p>iii. the nature, location, extent, design and appearance of the proposed development and the effects of these factors on <u>cultural and</u> historic heritage values;</p> <p><u>iv. the location of the proposed development in terms of the Cultural Zone (buffer zone between the proposed development and the cultural and historic heritage sites) identified on GIS map layer # and the effects of its location on cultural heritage values</u>;</p> <p>v. the classification given to the <u>cultural and</u> historic heritage, as set out in Schedule 5A and the reasons for which it has been scheduled;</p> <p>vi. the extent to which the <u>cultural and</u> historic heritage has been damaged by natural events, weather, or environmental factors and any subsequent risk to public safety;</p> <p><u>vii. spatial planning considerations which involves (but not limited to) neighbouring rural nature, landscape, cultural history values and development-</u></p>	<p>under Section 2 of the RMA and includes reference to cultural qualities as well as sites of significance to Māori. Section 2 definition of "historic heritage" reads as follows:</p> <p>"...historic heritage means:</p> <p>(a) those natural and physical resources that contribute to an understanding and appreciation of New Zealand's history and cultures, deriving from any of the following qualities:</p> <p>(i) archaeological,</p> <p>(ii) architectural,</p> <p>(iii) cultural,</p> <p>(iv) historic,</p> <p>(v) scientific,</p> <p>(vi) technological, and</p> <p>(b) includes—</p> <p>(i) historic sites, structures, places, and areas; and</p> <p>(ii) archaeological sites, and</p> <p>(iii) sites of significance to Māori, including wāhi tapu, and</p> <p>(iv) surroundings associated with the natural and physical resources."</p> <p>The Hearing Panel also have concerns that these and other amendments would reduce certainty in the application of Plan provisions including rules. It is currently quite clear what is meant by the term historic heritage and that it includes sites of significance to Māori and cultural aspects. That is not the case with the term "cultural heritage", which potentially has a much broader meaning in the context of this policy.</p> <p>Notwithstanding the above, the Hearing Panel has recommended changes elsewhere in the Plan to strengthen references to cultural heritage. This included expanding the scope of Objective 11 to refer to cultural heritage, the inclusion of a new policy (and schedule) addressing taonga species, and new standards, terms and conditions addressing the protection of taonga species and sites of significance.</p> <p>Other suggested changes by the submitter include referencing the GIS map layer. This was considered unnecessary as the schedule includes all appropriate map links and referencing tangata whenua in Policy 15 (c) was considered unnecessary as</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>related interests; identification of conflicting activities that would impact on mana whenua issues, areas of interest and cultural significance;</u></p> <p>viii the importance (if any) of land surrounding the <u>cultural and</u> historic heritage;</p> <p>ix. the degree of compliance with Heritage New Zealand's Pohere Taonga Archaeological requirements;</p> <p>x. any investigation and documentation of the site to provide a historical record; and</p> <p>xi. the outcome of any consultation <u>including written approvals</u> with any relevant body or individual, such as Heritage New Zealand Pohere Taonga, the Department of Conservation, or local iwi and/or hapū; [...]</p>	<p>such matters are more appropriately addressed in (b) which provides a higher level of protection.</p> <p>The submitter also sought reliefs that rely on a cultural zone. The submitter does not identify how or what would be considered a cultural zone or how such zones would be identified.</p>

Policy 16 – Relationship of tangata whenua			
6 – Trans-Tasman Resources Ltd	400	<p>Amend</p> <p>Submitter seeks amendment to Policy 16(i) and (j) of the Plan to read:</p> <p><i>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment and take into account the principles of the Treaty of Waitangi, and kaitiakitanga. The Taranaki Regional Council will provide opportunities for tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</i></p> <p>[...]</p> <p>(i) requiring that resource consent applications or plan change applications assess provide <u>cultural and/or historic heritage/archaeological impacts assessments and/or archaeological assessments</u> where <u>relevant appropriate</u>; and</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>In relation to amending Clause (i), the Hearing Panel suggests that the current wording is appropriate in that it notes that cultural impact assessments will be provided where appropriate. What is appropriate will depend upon individual circumstances and the wider context. Such matters are routinely canvassed and effectively addressed as part of any consenting process. The Hearing Panel notes that the Policy does not require cultural impact assessments to be provided in <u>all</u> circumstances (which is the matter of concern to the submitter). The suggested amendments to Policy 16(1), as supplied by the submitter, were not considered appropriate as it is not the duty of the applicant to assess – only tangata whenua can do this and the policy is about tangata whenua rather than wider historic heritage matters.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		(j) involving taking into account any views of tangata whenua in the development of any relevant proposed consent conditions, compliance monitoring plans and/or enforcement procedures where appropriate.	Similarly, in relation to amending Clause (j) the Hearing Panel notes that the Policy is seeking to involve tangata whenua in resource management processes where it is appropriate. Providing tangata whenua with opportunities to actively participate in resource management processes requires more than this Council just taking into account their views. Again the Hearing Panel suggests that the current wording is appropriate in that it requires tangata whenua involvement, where appropriate.

40 – Te Rūnanga o Ngāti Mutunga	403	Amend	Accept in part
		Submitter seeks amendment to Policy 16 of the Plan to read: <i>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment and take into account the principles of the Treaty of Waitangi, and kaitiakitanga. The Taranaki Regional Council will provide opportunities for tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</i> (a) <i>taking into account any relevant iwi planning documents and consider providing practical assistance to iwi or hapū who have indicated a wish to develop iwi/hapū resource management plans:</i> [...]	The submitter seeks a number of amendments to Policy 16 relating to iwi/hapū involvement in the resource management process. The Hearing Panel notes that many of the requests are actually methods and are already provided for in other, more appropriate, areas of the Plan and do not require repeating within this Policy. For example, the relief sought in (a) is a method that is already provided for in Section 5 [Methods of implementation] of the Plan, and more specifically Methods 22 and 26, which refers to the Council actively supporting and assisting in surveys, research and investigations and technical advice and support for preparing iwi planning documents. Notwithstanding the above, the Hearing Panel recommends amending Policy 16 to further strengthen tangata whenua involvement in RMA processes under the Plan,

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(k) the Council ensures the active involvement of the appropriate iwi/hapū in management of the coastal environment when activities may affect their interests and values;</u></p> <p><u>(l) provide for opportunities for iwi/hapū to exercise kaitiakitanga over waters, forest, lands and fisheries in the coastal environment through such measures as:</u></p> <p><u>(i) bringing cultural understanding to monitoring of natural resources</u></p> <p><u>(ii) providing appropriate methods for the management, maintenance and protecting of the Taonga of tangata whenua</u></p> <p><u>(iii) having regards to regulations, rules or bylaws relating to ensuring sustainability of fishing resources such as taiapure, mahinga mataitai or other non-commercial Māori customary fishing</u></p> <p><u>(m) where proposals are likely to have an adverse effect on the mauri of the coastal environment, the Council shall consider imposition of consent conditions that incorporate the use of mātauranga Māori based methods or cultural indicators that recognise and express Māori values to monitor the effects of the activity on the mauri of the natural and physical resources of the coastal environment.</u></p>	<p>including a new Clause (k) (plus other consequential changes sought by other submitters) that reads as follows:</p> <p>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment, <u>including the role of tangata whenua as kaitiaki</u>, and take into account the principles of the Treaty of Waitangi.</p> <p>The Taranaki Regional Council will provide opportunities for <u>working in partnership with</u> tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</p> <p>[...]</p> <p><u>(k) considering consent conditions that incorporate the use of mātauranga Māori based methods or cultural indicators that recognise and express Māori values to monitor the effects of the activity on the mauri of the natural and physical resources of the coastal environment.</u></p> <p>The Hearing Panel further recommends amending the Plan to include a new Policy and Schedule addressing the protection of taonga species plus amendments to Implementation Methods.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
48 – Taranaki District Health Board	405	<p>Amend</p> <p>The submitter would like to enhance the partnership with tangata whenua whilst acknowledging holistic views of the environment. Submitter seeks amendments to Policy 16 of the Plan to read:</p> <p><i>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment and take into account the principles of the Treaty of Waitangi, and kaitiakitanga. The Taranaki Regional Council will provide opportunities for <u>working in partnership with</u> tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</i></p> <p><i>(a) <u>encouraging taking into account</u> the use of relevant iwi planning document [...]</i></p>	<p>Accept in part</p> <p>The Hearing Panel recommends amending Policy 16 to include reference to “working in partnership with tangata whenua”.</p> <p>However, the Hearing Panel recommends declining the requested amendment for “encouraging” to replace “taking into account”. “Taking into account” will require the Council to be aware of the relevant iwi planning document and to take into consideration the planning provisions included. However, the Hearing Panel does not believe it is the role of Council to “encourage” the use of iwi planning documents. Indeed there might be occasion when iwi management provisions (which have not gone through a RMA or public plan process) are inconsistent with Coastal Plan provisions and might be inappropriate to encourage their use/application.</p>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
57 – Heritage New Zealand	406	<p>Amend</p> <p>Submitter seeks amendment to Policy 16(b) of the Plan to read:</p> <p><i>(b) Taking into account any relevant memorandum of understanding <u>or kaitiaki agreement with between the Taranaki Regional Council and the</u> iwi authorities;</i></p> <p>OR</p> <p>Alternatively, amend Policy 13(a)(ii) to reference kaitiaki agreements.</p>	<p>Accept</p> <p>The submitter wishes to amend Policy 16(b) to include reference to kaitiakitanga agreements. The Hearing Panel recommends granting the relief sought by stating that the Council will take into account any kaitiakitanga agreements alongside any memorandum of understanding agreements.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
60 - Te Kaahui o Rauru	410	Amend Submitter seeks amendment to Policy 16(g) of the Plan to include the right of local iwi/hapū to choose said person of expertise, as long as there has been no illustrated conflict of interest.	Grant in kind Policy 16 (g) allows a person of tikanga Māori expertise the ability to be heard in any hearing committee if a resource consent application raises significant issues for tangata whenua. The Hearing Panel considers that consultation with iwi authorities when providing for the appointment of the person of expertise is necessary and appropriate and recommends Policy 16(g) be amended to read: <i>(g) providing for the appointment of a person(s) with recognised expertise in tikanga Māori to any hearing committee where a resource consent application raises significant issues for tangata whenua, <u>in consultation with the relevant iwi authority;</u></i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
60 - Te Kaahui o Rauru	411	Amend Submitter seeks amendment to Policy 16(h) of the Plan to read: <i>(h) recognising <u>and providing for</u> the importance of matauranga maaori, customary, traditional and intergenerational knowledge [...]</i>	Grant in kind The Hearing Panel recommends an alternative relief to that sought by the submitter but which better recognises and provides for mātauranga Māori. The Hearing Panel recommends, in response to this and other submitter requests, the inclusion of a new clause that further strengthens consideration of mātauranga Māori that reads: <i><u>(k) considering consent conditions that incorporate the use of mātauranga Māori based methods or cultural indicators that recognise and express Māori values to monitor the effects of the activity on the mauri of the natural and physical resources of the coastal environment.</u></i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	412	Amend Submitter seeks amendment to Policy 16 of the Plan to clearly articulate tangata whenua participation and to list existing formal relationships between tangata whenua and councils (include reference to any agreement document). Besides Mana Whakahono a Rohe/Iwi Participation Arrangements, this includes (but not limited to) Transfer of Powers under Section 33 of the RMA, Memoranda of Understanding, co-management agreements, specific consultation processes with tangata whenua, and details of agreement as determined in consultation with tangata whenua. The recommended amendments to Policy 16 read as follows: <i>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment and take into account the principles of the Treaty of Waitangi, and kaitiakitanga. The Taranaki Regional Council will <u>provide</u></i>	Accept in part The Hearing Panel notes consequential changes to Policy 16 that accept in part the relief sought by submitter. Hearing Panel do not believe it is appropriate or necessary to list formal agreements and consultative processes with iwi in a Policy. Such matters are operational detail rather than policy considerations and are already recognised and provided for in the Plan methods of Implementation. For example, Method 11 already refers to the consideration of section 33 transfer of powers, Method 30 refers to memoranda of understandings, and Method 31 refers to tangata whenua representation on Council's standing committees. The methods are deliberately high level. Specifying or listing particular agreements would inevitably lead to details in the Plan becoming out dated as new or amended agreements are reached and recognising iwi interest in

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>opportunities ensure the active participation of for tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</p> <p>[...]</p> <p>(c) implementing the relevant legal requirements of Treaty settlements, including representation on Council committees; and have regard to taking into account other aspects of Treaty settlements including, statements of association, protection principles and statutory acknowledgements;</p> <p>(d) responding to requests for Mana Whakahono a Rohe to enhance the opportunities for collaboration with iwi provide for Mana Whakahono a Rohe. Transfer of Powers under section 33 of the RMA, Memoranda of Understanding, co-management agreements, specific consultation processes including details of agreement as determined in consultation with tangata whenua to enhance the opportunities for collaboration with iwi;</p> <p>[...]</p> <p>(i) requiring that resource consent applications, notice of requirements or plan change applications provide cultural impact assessments and/or archaeological assessments where deemed appropriate by mana whenua or heritage authorities;</p> <p>(j) recognise the matters/values identified and proposed for protection by mana whenua in the cultural impact assessment; [...]</p>	<p>developing and reaching agreement on Mana a Whakahono a Rohe provisions of the RMA.</p> <p>Notwithstanding the above, amendments are proposed in Policy 16 to accommodate some of the amendments sought by this and other submitters. The changes proposed will strengthen mechanisms for recognising and providing for tangata whenua involvement in RMA processes under the Plan.</p> <p>The revised Policy would read as follows:</p> <p>Recognise and provide for the relationship of tangata whenua culture, values and traditions with the coastal environment, <u>including the role of tangata whenua as kaitiaki</u>, and take into account the principles of the Treaty of Waitangi.</p> <p>The Taranaki Regional Council will provide opportunities for <u>working in partnership with</u> tangata whenua to actively participate in the resource management process where decisions are being made on issues of significance to tangata whenua by:</p> <p>(a) taking into account any relevant iwi planning document, <u>including but not limited to environmental plans, management plans, kaitiaki plans and marine spatial plans recognised by an iwi authority;</u></p> <p>(b) taking into account any relevant memorandum of understanding <u>or kaitiaki agreement with</u> the iwi authorities;</p> <p>(c) implementing the relevant legal requirements of Treaty settlements, including representation on Council committees; and taking into account other aspects of Treaty settlements including, statements of association, protection principles and statutory acknowledgements;</p> <p>(d) <u>give effect to</u> Mana Whakahono a Rohe <u>that provide agreements about how iwi may contribute to resource management processes;</u></p> <p>(e) providing for tikanga Māori and interpretation services for the use of Māori language in presenting evidence;</p> <p>(f) providing for marae-based pre-hearing meetings and hearings where appropriate;</p> <p>(g) providing for the appointment of a person(s) with recognised expertise in tikanga Māori to any hearing committee where a resource consent application raises significant issues for tangata whenua, <u>in consultation with the relevant iwi authorities;</u></p> <p>(h) recognising the importance of mātauranga Māori, customary, traditional and intergenerational knowledge;</p> <p>(i) requiring that resource consent applications or plan change applications <u>assess</u> cultural <u>and/or historic heritage</u> impacts <u>s assessments</u> where <u>relevant;</u></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			(j) <u>taking into account any views of tangata whenua on any relevant proposed consent conditions, compliance monitoring plans and/or enforcement procedures; and</u> (k) <u>considering consent conditions that incorporate the use of mātauranga Māori based methods or cultural indicators that recognise and express Māori values to monitor the effects of the activity on the mauri of the natural and physical resources of the coastal environment.</u>
NEW Policy 16A – Relationship of tangata whenua			
28 – Grant Knuckey	413	Amend Submitter seeks amendment to the Plan to include policies for the Taranaki Regional Council to partner with mana whenua to maintain and enhance coastal values in the coastal marine area, including the establishment of ecological bottom lines or agreed targets for maintaining the natural character, biodiversity and cultural resources of the coastal marine area and whenua.	Accept in part No precise details of amendments sought to the Plan have been provided but the submitter is seeking the inclusion of additional policies. The Hearing Panel notes that, in response to a number of submitters, consequential amendments have been made to Policy 16 that may partially give effect to the relief sought by the submitter. The submitter also refers to the setting of ecological bottom lines or agreed targets for maintaining the natural character, biodiversity and cultural resources of the coastal marine area and whenua. Hearing Panel note that all General Policies (and relevant Activity-specific Policies must be read together). These policies already address values associated with natural character, indigenous biodiversity, and historic heritage, which includes sites of significance to Māori. In response to submissions, the Hearing Panel further recommends amending the Plan to include a new Policy 14A and B that addresses the protection of biodiversity generally plus taonga species.
Policy 17 – Public access			
2 – Federated Farmers	414	Amend Submitter seeks that Policy 17 of the Plan be amended to read: <i>Maintain and <u>as far as practical</u> enhance <u>where a demand exists</u>, public access to, along and adjacent to the coastal environment <u>marine area</u>, <u>while minimising conflict with other land users</u> by:</i> (a) avoiding, remedying or mitigating any adverse effects of activities on public access;	Accept in part The Hearing Panel recommends granting the relief sought by the submitter, in part. In particular, the Hearing Panel agrees that Policy 17 be amended to align with Policy 19(2) of the <i>New Zealand Coastal Policy Statement</i> which refers to the “coastal marine area” (rather than coastal environment). The amendments do not change the policy intent of the Policy as it still quite clearly applies to the landward parts of the coastal environment adjacent to the coastal marine area.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(b) promoting the enhancement or restoration of public access including for the connection of areas of public open space, access to mahinga kai, access to sites of historical and/or cultural importance, improving outdoor recreation opportunities, access to surf breaks and providing access for people with disabilities; and</p> <p>(c) only imposing a restriction on public access, including vehicles, where such a restriction is necessary to:</p> <p>(i) protect significant natural or historic heritage values;</p> <p>(ii) protect dunes, estuaries and other sensitive natural areas or habitats;</p> <p>(iii) protect sites and activities of cultural value to Māori;</p> <p>(iv) protect threatened or at risk indigenous species and rare and uncommon ecosystem types as identified in Schedule 4A;</p> <p>(v) protect public health or safety, including where the safety of other coastal or beach users is threatened by inappropriate use of vehicles on beaches and vessels offshore;</p> <p>(vi) provide for defence purposes in accordance with the Defence Act 1990 or port or airport purposes;</p> <p>(vii) avoid or reduce conflict between public uses of the coastal marine area and its margins;</p> <p>(viii) provide for temporary activities or special events;</p> <p>(ix) ensure a level of security consistent with the activity, including protection of equipment; or</p> <p><u>(x) to maintain a level of security for lawfully established activities, users and management of areas within or adjacent to the coastal marine areas;</u></p> <p><u>(xi) where the coastal marine area is in private ownership; or</u></p> <p>(xii) provide for other exceptional circumstances where restriction to public access is justifiable;</p> <p>and alternative access routes for the public have been considered and provided where practicable.</p> <p><u>Public access over private land remains at the discretion of the landowner.</u></p>	<p>However, the submitter has also sought other changes to address their concerns on conflict between coastal public access and private ownership. Some of these changes were considered unnecessary in that public access over private land is subject to other legislation, are already adequately addressed within the Policy, and/or are not decision making considerations.</p> <p>Recommended changes to the Policy in response to this submission (and other submitters) are as follows:</p> <p><u>Maintain and enhance public access to, along and adjacent to the coastal marine area by: [...]</u></p> <p>(b) promoting the enhancement or restoration of public access, <u>where demand exists</u>, including for the connection of areas of public open space, improving outdoor recreation opportunities, access to surf breaks and providing access for people with disabilities; and</p> <p>(c) imposing a restriction on public access, including vehicles, where such a restriction is necessary to: [...]</p> <p>(ix) ensure a level of security <u>for lawfully established activities</u> consistent with the activity, including protection of equipment; [...]</p>

Further submissions – Taranaki Energy Watch (51)		Oppose in part	
5 – Point Board Riders	415	Support Submitter supports policy promoting the enhancement or restoration of public access in the circumstances listed in Policy 17(b) of the Plan.	Accept Support noted. Policy 17(b) is retained subject to minor amendments as requested by other submitter that does not change the policy intent.
6 – Trans-Tasman Resources Ltd	416	Support Submitter supports recognition in Policy 17(c)(vii) and (ix) of the Plan that in some circumstances there may be a need to restrict access to parts of the coastal environment.	Accept Support noted. Policy 17(c)(viii) and (ix) is retained subject to minor amendment as requested by another submitter that does not change the policy intent.
15 – Surfbreak Protection Society	417	Support Submitter supports policy promoting the enhancement or restoration of public access in the circumstances listed in Policy 17(b) of the Plan.	Accept Support noted. Policy 17(b) is retained subject to minor amendments as requested by other submitter that does not change the policy intent.
20 – Meridian Energy Ltd	418	Amend Submitter seeks amendment to Policy 17 of the Plan to read: <i>Maintain and enhance public access to, along and adjacent to the coastal environment marine area by: [...]</i>	Accept The Hearing Panel recommend granting the relief sought by the submitter.
20 – Meridian Energy Ltd	419	Amend Submitter seeks amendment to Policy 17(c)(vii) of the Plan to clarify what sort of conflict it seeks to avoid or reduce between public uses of the coastal marine area and its margins. It is their view that the intention of the clause has not been clarified sufficiently.	Decline No precise details of amendments sought to the Policy 17(c)(vii) to address the submitter's concerns have been provided. However, the Hearing Panel notes that the Oxford Dictionary defines “ <i>conflict</i> ” as a serious disagreement or argument, typically a protracted one. What constitutes a conflict is likely to be determined on a case-by-case basis and depends upon a wider context. The Hearing Panel therefore does not believe it is necessary to specify or list what constitutes conflict in the Policy and indeed there would be risks in doing so. Any referencing of specific conflicts is unlikely to cover all situations and circumstances. Potentially some conflicts could be unnecessarily identified and others not listed. Of

Policy 18 – Amenity values			
5 – Point Board Riders Ltd	433	<p>Support</p> <p>Submitter supports Policy 18 of the Plan maintaining and enhancing significant amenity values associated with surf breaks identified in Schedule 7.</p>	<p>Accept</p> <p>The Hearing Panel notes the submitter's support for Policy 18(b).</p>
15 – Surfbreak Protection Society	434	<p>Amend</p> <p>Submitter supports in part Policy 18 of the Plan but seeks amendments to Policy 18(c) noting that the Policy only seeks to maintain and enhance significant amenity values associated with those surf breaks identified in Schedule 7. The submitter believes that the current provisions are not consistent with section 5 of</p>	<p>Decline</p> <p>The Hearing Panel notes that Schedule 7 identifies 140 surf breaks of national, regional and local significance. Identification and classification of these surf breaks was a comprehensive and collaborative exercise involving community and expert advice to identify surf breaks across Taranaki. That exercise identified 140 surf</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		the RMA. The submitter wishes to see the protections within Policy 18(c) expanded to also include local surf breaks not listed in Schedule 7.	breaks with attributes and characteristics triggering our significance criterion. The Council is unaware of any surf breaks that are not identified within Schedule 7 and would welcome any additional information that the submitter can offer. The submitter believes that the current protections provided for are not consistent with section 5 of the RMA but has not indicated how or why this view is held. The Hearing Panel has a contrary view and believe that the Council is to the forefront in surf break protection in New Zealand under the RMA.
20 – Meridian Energy	435	Amend Submitter wishes to see the reference to historic heritage deleted from Policy 18. The submitter notes that historic sites do not necessarily have any amenity values and that appropriate historic heritage matters are already covered in Policy 15 [Historic heritage]. Submitter seeks amendment to Policy 18 of the Plan to delete reference to historic heritage: <i>Maintain and enhance significant amenity values by avoiding, remedying or mitigating adverse effects on: [...]</i> <i>(d) historic heritage sites including those identified in Schedule 5.</i>	Decline The Hearing Panel recommends declining the relief sought by the submitter seeking that reference to historic heritage in Policy 18(d) be deleted. Officer acknowledge the point made by the submitter, however, the inclusion of the term "historic heritage" was intentional noting that historic heritage is commonly associated with high amenity values. For example, the RMA definition of " <i>historic heritage</i> " includes sites of significance to Māori. As identified in Schedule 5 there are a number of historic sites and places that clearly overlap with amenity values. They include mahinga kai, mataitai, hi ika sites not counting wild or scenic values that may also be associated with these sites and places. The Hearing Panel notes that many submitters have requested expanding Policy 18(d) in order to better recognise and provide for historic heritage sites that also have amenity values.
Further submissions – Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
22 – Lyndon DeVantier	436	Support Submitter supports aspirations in Policy 18 of the Plan to maintain and enhance significant amenity values.	Accept Support noted. Policy 18 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
29 – Department of Conservation	437	Amend Submitter seeks amendment to Policy 18 of the Plan by including a new provision to read: <i>(e) other areas of the coastal environment with significant amenity values not identified in the Schedules referred to in (a), (b), (c) and (d). [...]</i>	Accept The submitter wishes to broaden the coverage of Policy 18 to include other areas with significant amenity values not identified in the Schedules. The Hearing Panel recommends granting the relief sought by the submitter to include a new clause (e). The Hearing Panel notes that the suggested amendment is in accordance with Policies 6 [Activities in the coastal environment], 13 [Preservation of natural character] and 18 [Public open spaces] of the <i>New Zealand Coastal Policy Statement</i> .

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Policy 19 – Surf breaks and Significant Surfing Area			
2 – Federated Farmers	445	<p>Amend</p> <p>Submitter seeks amendment to the Plan and associated planning maps to move the inland boundary of the Significant Surfing Area seaward to the mean high water springs or similar, to avoid potential (and probably unintended) restrictions on normal farming activities.</p>	<p>Accept</p> <p>The inland extent of the Significant Surfing Area was initially influenced by the Southern Taranaki District Council's coastal protection area with the intention of maintaining the seascape. However, the policy is primarily for the protection of surf breaks not landscape values and, therefore, after considering the implications this may have on privately owned land, the Hearing Panel recommends moving the inland extent of the Significant Surfing Area to the coastal marine area as requested.</p>
2 – Federated Farmers	446	<p>Amend</p> <p>Submitter seeks amendment to Policy 19(b) and (d) to read:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities in the coastal environment Coastal Marine Area by:</i></p> <p><i>(a) avoiding adverse effects on:</i></p> <p><i>(i) all nationally significant surf breaks as identified in Schedule 7; and</i></p> <p><i>(ii) all surf breaks within the designated Significant Surfing Area as identified in Schedule 7;</i></p> <p><i>(b) avoiding adverse effects on all regionally significant surf breaks, identified in Schedule 7, that are outside of the Significant Surfing Area unless the activity is necessary for the provision of regionally important infrastructure <u>or farming activities</u>, avoidance of effects is not possible and adverse effects are remedied or mitigated;</i></p> <p><i>(c) avoiding, remedying or mitigating adverse effects on all locally significant surf breaks listed in Schedule 7;</i></p> <p><i>(d) within the Significant Surfing Area, avoiding significant adverse effects and avoiding, remedying or mitigating other adverse effects on seascape, including development <u>within the Coastal Marine Area</u> which would have an adverse effect on the remote feel of the area; and</i></p> <p><i>(e) in managing adverse effects in accordance with clauses (a), (b) and (c), having regard to:</i></p> <p><i>(i) effects on the quality or consistency of the surf break by considering the extent to which the activity may: change or interrupt coastal sediment dynamics; change or interrupt swell within the swell corridor including through the reflection,</i></p>	<p>Accept in part</p> <p>The Hearing Panel notes that references to the "coastal environment" in Policy 19 (rather than "coastal marine area") is intentional. It ensures that when managing adverse effects of use and development in the coastal marine area, there is wider consideration (through Policy 19) of effects on the wider coastal environment.</p> <p>Policy 19 and its application to the coastal environment promotes the integrated management of the wider area across environmental domains and local authority jurisdictional boundaries. This is consistent with Policy 4 of the <i>New Zealand Coastal Policy Statement</i> and contributes to meeting Objective 1 [Integrated management] of the Plan.</p> <p>Provisions for (b) is limited to regionally important infrastructure and the Hearing Panel does not recommend that it should extend to include farming activities. However, the Hearing Panel notes that the application of the Policy is through rules which pertain to activities in the coastal marine area. As such, land based farming activities are highly unlikely to create the types of effects outlined in (e).</p> <p>Clause (d) relates to development within the Significant Surfing Area. However, the Hearing Panel does not believe it is necessary or appropriate to refer to the coastal marine area and suggest that farming activities are not particularly affected by this Policy. Notwithstanding that, the Hearing Panel suggests some of the submitter's concerns may be partially addressed by granting relief sought by other submitters whereby the landward extent of the Significant Surfing Area is amended to be the mean high water springs.</p> <p>Within Clause (e)(ii), the Hearing Panel recommends granting the relief in part by removing reference to "access to". Access to surf breaks is but one of many important consideration for managing adverse effects and it is suggested that this</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><i>refraction or diffraction of wave energy; or change the morphology of the foreshore or seabed; and</i></p> <p><i>(ii) the effects on access to surf breaks and other qualities of surf breaks, including natural character, water quality and amenity values.</i></p>	<p>clause focus more broadly on other qualities of surf breaks. The revised Clause would read as follows:</p> <p><i>(ii) effects on other qualities and characteristics that contribute to use and enjoyment of surf breaks.</i></p>
Further submissions – Powerco (45)		Support in part	
5 – Point Board Riders	447	<p>Support</p> <p>Retain Policy 19 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 19 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>
15 – Surfbreak Protection Society	448	<p>Amend</p> <p>The submitter supports, in part, Policy 19 but seeks amendments to address concerns that Policy 19(b) only requires, in relation to activities necessary for the provision of Regional Important Infrastructure, that adverse effects that cannot be avoided, to be remedied or mitigated.</p> <p>Also have concerns that Policy 19(c) only seeks to avoid, remedy or mitigate adverse effects on locally significant surf breaks identified in Schedule 7.</p>	<p>Accept in part</p> <p>The Hearing Panel recommend granting the relief sought by the submitter in part. In relation to the submitter's concerns relating to Policy 19(b), and as a response to requests sought by other submitters (refer submission points 451 and 1355), the Hearing Panel recommends amending Policy 19(b) to delete reference that adverse effects associated with Regionally Important Infrastructure (that cannot be avoided) only need to be remedied or mitigated. These consequential changes related to the inclusion of a new policy addressing the national grid and the re-designation of the Breakwater surf break from regionally significant to locally significant in Schedule 7A and associated planning maps that makes the current wording of the clause redundant.</p> <p>The Hearing Panel also notes the submitter's concerns that Policy 19(c) only seeks to avoid, remedy or mitigate adverse effects on locally significant surf breaks identified in Schedule 7. However, this is considered appropriate and reflects the hierarchical protection inherent in the the Policy based upon the relative national, regional and local values of Taranaki surf breaks.</p>
19 – South Taranaki District Council	449	<p>Amend</p> <p>Submitter seeks amendment to Policy 19 to read:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities toby:</i></p> <p><i>(a) avoid, <u>remedy or mitigate</u> significant adverse effects on: [...]</i></p> <p>OR</p>	<p>Accept</p> <p>The submitter notes that the Council is wishing to provide a higher level of protection for a higher number of surf breaks than required by the <i>New Zealand Coastal Policy Statement</i>. The submitter suggests that under Policy 19 it would be very difficult for any activity that gives rise to any adverse effects on amenity or natural character to</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		remove reference to "natural character" and "amenity values" from Policy 19(e)(ii).	find support because the Policy does not refer to an acceptable level of effects or provide for effects to be remedied or mitigated.
Further submissions – Powerco (45)		Support in part	The Hearing Panel notes the concerns of the submitter and recommend granting the relief sought by the submitter by amending Policy 19(e)(ii) to delete reference to "natural character" and "amenity values".
22 – Lyndon DeVantier	450	Other	No relief necessary
		Submitter supports aspirations in Policy 19 but raises concerns relating to impacts arising from the Significant Surfing Area, the engagement process, and the threats posed by surfing competitions and increased visitor numbers.	<p>The submitter does not expressly request amendments to Policy 19 but does highlight a number of concerns, presumably in opposition to the concept of the Significant Surfing Area, that warrant a response.</p> <p>Concerns relating to the engagement process are noted. However, the Hearing Panel notes that the proposals to identify and provide a high level of protection to all surf breaks between Kahihi Road and Cape Road originated from a consultant's report entitled <i>Taranaki Surf breaks of National Significance</i>, with attributes of surf breaks in that area being later confirmed through an online community survey. The proposal was further consulted on through a Draft Proposal that was widely distributed to interested parties and then the Proposed Plan.</p> <p>Concerns raised by the submitter primarily relate to matters outside the jurisdiction of the Council. They include issues around conflict between organised events, overcrowding at surf breaks, tourism impacts on the environment, freedom camping, and the provision of infrastructure. The concerns are valid and though largely outside the regulatory framework of the Plan (whereby the rules apply to the coastal marine area only), it does highlight the importance of Plan methods and the need for this Council, district councils and other parties to work together to address the concerns.</p>
26 – Transpower NZ Ltd	451	Amend	Grant in kind
		<p>The submitter wishes to amend Policy 19 in order to bring the Policy into closer alignment with Policy 8 [Aquaculture] of the <i>New Zealand Coastal Policy Statement</i> by amending Policy 19(b) to read:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities by:</i></p> <p>[...]</p> <p><i>(b) avoiding adverse effects on all regionally significant surf breaks, identified in Schedule 7, that are outside of the Significant Surfing Area;</i></p>	<p>The submitter requests that the word "<i>possible</i>" has a very confined meaning and conveys only a technical requirement whereas there may be a variety of other reasons why adverse effects cannot be avoided. The suggested replacement "<i>practicable</i>" is in accordance with the Policy 8 <i>National Policy Statement for Electrical Transmission</i>. The submitter also requests to include "adverse" effects within the Policy to clarify that it is adverse effects which are the issue.</p> <p>The Hearing Panel notes that in response to other submitters it is recommended that the exclusion for regionally important infrastructure be deleted. Instead an alternative relief is recommended to address submitter's (and others) concerns that makes this provision now redundant and potentially confusing. The submitter is referred to</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		unless <i>following a route, site and method selection process</i> , the activity is necessary for the provision of regionally important infrastructure, avoidance of <i>adverse</i> effects is not possible <i>practicable</i> and adverse effects are remedied or mitigated <i>to the extent reasonably practicable</i> ; [...]	submission point 325 where a new Policy 6A specifically recognises and provides for the National Grid in a similar, but more appropriate, manner and in a manner that is more aligned with the provisions of the <i>National Policy Statement for Electricity Transmission</i> .
32 – Port Taranaki	452	<p>Amend</p> <p>Submitter seeks amendment to Policy 19(b) of the Plan to read:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities by:</i></p> <p>[...]</p> <p><i>(b) avoiding adverse effects on all regionally significant surf breaks, identified in Schedule 7, that are outside of the Significant Surfing Area;</i></p> <p><i>unless the activity is necessary for the provision of regionally important infrastructure, avoidance of effects is not possible, and adverse effects are remedied or mitigated; [...]</i></p>	<p>Grant in kind</p> <p>The submitter is concerned that Policy 19(b) and the exemption for regionally important infrastructure is unclear. In particular, the submitter is concerned that the provision that avoidance of effects is not possible is ambiguous and potentially sets unrealistic expectations.</p> <p>The Hearing Panel notes that most of the concern relating to this provision relates around the relative significance of the Breakwater surf break, its 'regional' status, and the potential for the Policy to impact on the Port's operational requirements in the future. However, the Hearing Panel considers that an alternative relief involving amendments to Schedule 7 [Surfbreaks] under submission point 1355 will address these concerns and recommends that the exemption for regionally important infrastructure be deleted.</p>
41 – Te Korowai o Ngāruahine Trust	453	<p>Amend</p> <p>Submitter seeks amendment to Policy 19 of the Plan to ensure the protection of the surf breaks is not incompatible with the traditional cultural sites of significance, including those set out in Schedule 5B.</p>	<p>Accept in part</p> <p>The Hearing Panel notes that all General Policies (and relevant Activity-specific Policies) must be considered together. Accordingly, all activities, not just those associated with protection of surfing values, need to consider adverse effects on traditional cultural sites of significance, including those set out in Schedule 5B. The submitter has highlighted an issue in this part of the Policy whereby some associative values have been identified (and not others) thereby potentially derogating from the aforementioned approach. It is not considered necessary to paraphrase other Policies and indeed there are risks in doing so.</p> <p>The Hearing Panel recommends an alternative relief whereby Policy 19(e) is reframed to focus only on surfing attributes and adverse effects on other values be addressed in their relevant policies elsewhere (e.g. under the relevant natural character, historic heritage or public access policies).</p> <p>The amended Policy 19(e) would read as follows:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities by:</i></p> <p>[...]</p>

45 – Powerco	455	Support	Accept
		Retain Policy 19 of the Plan as notified.	Support noted. Policy 19 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
49 – Cam Twigley	456	Amend	Grant in kind
		<p>Submitter seeks amendment to Policy 19(d) of the Plan to read:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities by: [...]</i></p> <p><i>(d) within the Significant Surfing Area, avoiding significant adverse effects and avoiding, remedying or mitigating other adverse effects on seascape, including development which would have an adverse effect on the remote feel of the area; and in managing adverse effects in accordance with clauses (a), (b) and (c), having regard to: [...]</i></p>	<p>The submitter believes that Policy 19(d) is in conflict with Policy 19(a)(ii) in relation to the levels of protection provided for. In Policy 19(a) there is a requirement to avoid adverse effects of all surf breaks within the designated Significant Surfing Area while in Policy 19(d) there is only need to avoid significant adverse effects.</p> <p>The Hearing Panel agrees that there are conflicts between the differing levels of protection for the Significant Surfing Area provided in Clauses (a) and (d) of Policy 19, which require resolving.</p> <p>Clause (d) refers to seascapes. The Hearing Panel recommends an alternative relief to that proposed by the submitter by deleting Clause (d).</p> <p>Seascapes are more appropriately provided for under Policy 8(b) [Areas of outstanding value] and/or Policy 9 [Natural character]. In response to reliefs sought by other submitters to the planning maps, the Hearing Panel has recommended confining the extent of the significant surfing zone to the coastal marine area line and removing the inland component of the coastal environment. This amendment makes Clause (d) redundant as seascapes are no longer captured within the designated area.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
58 – Te Atiawa	457	<p>Amend</p> <p>Submitter seeks amendment to Policy 19 of the Plan to ensure that the protection of the surf breaks is not incompatible with the traditional cultural uses expressed by Māori in Schedules 5B.</p>	<p>Accept</p> <p>The Hearing Panel notes that all General Policies (and relevant Activity-specific Policies) must be considered together. Accordingly, all activities, not just those associated with protection of surfing values, need to consider adverse effects on traditional cultural sites of significance, including those set out in Schedule 5B. The submitter has highlighted an issue in this part of the Policy whereby some associative values have been identified (and not others) thereby derogates from the aforementioned approach. It is not considered necessary to paraphrase other policies and indeed there are risks in doing so.</p> <p>The Hearing Panel therefore recommends an alternative relief whereby Policy 19(e) is reframed to focus only on surfing attributes and adverse effects on other values be addressed in their relevant policies elsewhere (e.g. under the relevant natural character, historic heritage or public access policies).</p> <p>The amended Policy 19(e) would read as follows:</p> <p><i>Protect surf breaks and their use and enjoyment from the adverse effects of other activities by:</i></p> <p><i>[...]</i></p> <p><i>(e) in managing adverse effects in accordance with clauses (a), (b) and (c), having regard to:</i></p> <p><i>(i) effects on the quality or consistency of the surf break by considering the extent to which the activity may: change or interrupt coastal sediment dynamics; change or interrupt swell within the swell corridor including through the reflection, refraction or diffraction of wave energy; or change the morphology of the foreshore or seabed; and</i></p> <p><i>(ii) effects on other qualities and characteristics that contribute to use and enjoyment of surf breaks.</i></p>
Policy 20 – Avoidance of increasing coastal hazard or public safety risks			
2 – Federated Farmers	458	<p>Other</p> <p>Submitter seeks that provisions designed to protect against coastal hazards avoid unnecessarily capturing farm infrastructure.</p>	<p>No relief necessary</p> <p>The Hearing Panel recognises the concerns of the submitter but note that Policy 20 only addresses infrastructure that <u>increases</u> the risk from coastal hazards and is therefore more likely to protect farm infrastructure at risk from natural hazards such as coastal erosion.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
6 – Trans-Tasman Resources Ltd	459	Amend Submitter seeks amendment Policy 20 of the Plan to read: <i>Avoid increasing the risk of social, environmental and economic harm from coastal hazards or posing a threat and avoid increased risks to public health and safety, or aircraft or navigation safety including by:[...]</i>	Accept The submitter suggests that the use of the words "...posing a threat" in Policy 20 is too uncertain and instead the Policy should be amended to refer to avoiding increased risks to public health and safety and aircraft and navigation safety. The Hearing Panel agrees and recommends amending Policy 20 for the purposes of improved certainty and clarity to read: <i>Avoid increasing the risk of social, environmental and economic harm from coastal hazards and avoid increased risks to public health and safety, or aircraft or navigation safety including by: [...]</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Policy 21 – Natural hazard defences			
2 – Federated Farmers	462	Amend	No relief necessary
		Submitter supports in part Policy 21 of the Plan but seeks that provisions designed to protect against coastal hazards avoid unnecessarily capturing farm infrastructure.	The Hearing Panel suggests no relief is necessary. The Hearing Panel note that Policy 21 relates to natural hazard defences, therefore, any capture of farm infrastructure is likely to be very limited.
42 – Ngati Rahiri Hapū	463	Amend	Decline
		Submitter supports Policy 21 of the Plan but seek amendment to show how or what will be done to provide a natural defence from coastal hazards.	Policy 21 gives effect to Policy 26 [Natural defences against coastal hazards] of the <i>New Zealand Coastal Policy Statement</i> . It recognises that natural defences should be provided for where appropriate. However, the Hearing Panel does not believe it is necessary for the Policy to go into the details of how this is to be achieved. Such detail is better outlined elsewhere in the Plan and through consenting processes. Section 6 [Methods of implementation] sets out non regulatory methods for addressing natural hazard defences. The Policy will also inform consenting processes associated with implementing rules. The detail as to how or what will be done to provide a natural hazard defence should be considered at the consenting level having regard to all the relevant policies, methods and rules.

43 – Royal Forest and Bird Protection Society	464	Support	Accept
		Retain Policy 21 of the Plan as notified.	Support noted. Policy 21 is retained as currently notified.
Further submissions – Port Taranaki Ltd (32)		Support	
Section 5.2 – Activity-based policies			
57 – Heritage New Zealand	465	Amend	Accept
		Submitter seeks amendment to the preamble in Section 5.2 [Activity-based policies] of the Plan to read: <i>[...] The activity-based policies must be considered alongside the general policies and never in isolation. <u>Where a policy in this section conflicts with a general policy in 5.1, the general policy takes precedence.</u></i>	The submitter wishes to clarify the relationship between the General Policies in 5.1 and the activity-based policies, in particular, set out what takes precedence when the policies in each section are in conflict. The submitter considers the general policies should take precedence and the activity-based policies function be to provide additional detail.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Trans-Tasman Resources Ltd (6), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	The Hearing Panel agrees noting that this is how the Plan provisions should be read and applied. It is therefore recommended that Section 5.2 be amended with slightly different wording to maintain consistency throughout the Plan that achieves the intent sought by the submitter.
Policy 22 – Discharge of water or contaminants to coastal water			
8 – Silver Fern Farms	466	Support	Accept
		Retain Policy 22 of the Plan to provide for the discharge of contaminants to coastal waters, where it is the most practicable option.	Support noted. Policy 22 is retained subject to minor amendments as requested by other submitters that does not change the policy intent.
Further submissions – Federated Farmers (2)		Support	
15 – Surfbreak Protection Society	467	Other	No relief necessary
		Submitter supports in part Policy 22 of the Plan but question what and how to measure “acceptable quality”.	The term “ <i>acceptable quality</i> ” recognises that discharges of water or contaminants to water in the coastal marine area takes many forms – ranging from point source discharges to land runoff of rainfall. The effects of the discharges are likely to vary based upon the type volume of contaminants in the discharge plus location. Policy 22(a) therefore necessarily requires discharges to be considered on a case-by-case basis that determines the acceptability of the discharge based upon the matters considered in Policy 22(a)(i) to (iii). These relate to having regard to the sensitivity of the receiving environment, including associated values, the nature and concentration of the contaminants and the efficiency of waste reduction, treatment and disposal measures and the capacity of the receiving environment to assimilate the contaminants. What is considered “ <i>acceptable quality</i> ” will be determined on a case-by-case basis through the consenting process being directed by the requirements of Policy 22 (in addition to any other requirements arising from the General Policies).
33 - New Zealand Defence Force	468	Support	Accept
		Retain Policy 22 of the Plan as notified.	Support noted. Policy 22 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	469	<p>Amend</p> <p>Submitter seeks amendment to Policy 22 of the Plan to read: <i>Discharges of water or contaminants to water in the coastal marine area will <u>must</u>: [...]</i></p>	<p>Accept</p> <p>The use of terms with similar meanings such as “<i>must</i>”, “<i>will</i>” and “<i>shall</i>” has been alternatively adopted throughout many second generation planning documents, including national policy statements and regional plans.</p> <p>A number of submitters have identified they prefer the term “<i>must</i>”, instead of “<i>will</i>” in relevant policies. Some have argued that the use of the term “<i>must</i>” is more legally robust. The Hearing Panel has no objection to making the change noting that the policy intent of this Policy is that the activity needs to comply with the provision.</p> <p>Unless the context indicates otherwise, the Hearing Panel recommends additional consequential amendments throughout Plan policies to align language to consistently refer to “<i>must</i>”.</p>
43 – Royal Forest and Bird Protection Society	470	<p>Support</p> <p>Retain Policy 22 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 22 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>

Policy 24 – Discharge of treated wastewater containing human sewage			
15 – Surfbreak Protection Society	480	Other	No relief necessary
		Submitter suggests Policy 24 of the Plan is in conflict with other water quality policies and seems more permissive.	<p>The submitter has not indicated how or where such conflicts occur nor what specific relief is sought to alleviate their concerns.</p> <p>The Hearing Panel does not consider Policy 24 to be permissive or to be in conflict with other policies relating to discharges to the coastal marine area. Policy 24 recognises that there are circumstances when treated discharges of wastewater</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>containing human sewage may be appropriate (most cities in New Zealand discharge wastewater either directly or indirectly to the coastal marine area). The Policy only allows existing discharges to the open coast and only following careful evaluation of alternatives to discharging (including land disposal and wetland treatment) and consultation with tangata whenua and the community generally. Through the consenting process (whereby such discharges are confined to the Open Coast coastal management area and are processed as a discretionary activity) Policy 24 would be read alongside all other General Policies and is required to fulfil the other General Policies as well as Policy 24.</p> <p>The Hearing Panel notes that amendments have been made to the introduction of Section 5.2 of the Plan to clarify that in the event of any inconsistency between an Activity-specific Policy and a General Policy, the General Policy will take precedence.</p>
40 – Te Rūnanga o Ngāti Mutunga	481	Amend	Decline
		<p>Submitter seeks amendment to Policy 24 of the Plan to replace proposed Policy so as to prohibit any discharges of wastewater to the coastal marine area with:</p> <p><u>Discharges of treated wastewater containing human sewage will not be allowed.</u></p>	<p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>The relief sought would immediately preclude existing lawful discharges of municipal waste discharges to the coastal marine area in the absence of any other practicable options. To divert the quantities of waste onto land or other receiving environments is likely to be impracticable due to fiscal and technical constraints plus result in worst environmental outcomes due to the quantities involved and the lack of suitable locations to ensure the waste can be properly and safely assimilated to avoid, minimise or mitigate adverse environmental effects.</p> <p>The Hearing Panel notes that the Taranaki region only has three municipal wastewater discharges. The resource consents for these marine outfalls include conditions that the consent holder must adhere to. These conditions are designed to prevent adverse effects by including limits on the discharge (pertaining to quality and quantity) and impact on the receiving environment. Consent holders must regularly reassess whether the current system remains to be the best practicable option, in light of technological advances and changing circumstances. Community involvement in the monitoring and management of these discharges, through involvement plans and stakeholder meetings, is also required in the resource consents.</p> <p>The Hearing Panel suggests that some provision must be made in the policies and the rules to provide for the discharge of wastewater that contains treated human sewage. Most New Zealand cities discharge treated wastewater directly or indirectly into the coastal marine area. However, this rule is a discretionary activity, which means a resource consent may be granted or declined subject to the policies. A</p>

5 – Point Board Riders	492	Support	Accept
		Retain Policy 26 of the Plan seeking to improve existing wastewater discharges to coastal waters.	Support noted. Policy 26 is retained as notified.
15 – Surfbreak Protection Society	493	Support	Accept
		Retain Policy 26 of the Plan seeking to improve existing wastewater discharges to coastal waters.	Support noted. Policy 26 is retained as notified.
23 – New Plymouth District Council	494	Support	Accept
		Retain the use of the phrase “best practicable option” in Policy 26(a) of the Plan.	Support noted. Policy 26 is retained as notified.
40 – Te Rūnanga o Ngāti Mutunga	495	Support	Accept
		Submitter supports Policy 26 of the Plan but, in relation to Clause (b), seeks that the Taranaki Regional Council work with current consent holders to see if improvements could occur within the shortest possible time rather than allowing it to occur until the end of the current consent.	The Hearing Panel notes that the Council annually monitors and works with current consent holders to not only ensure compliance with consent conditions, which includes regularly reassessments to ensure the current system remains the best practicable option, in light of technological advances and changing circumstances. Community involvement in the monitoring and management of these discharges, through involvement plans and stakeholder meetings, is also required in the resource consents. Through this process, improvements are expected to occur within the shortest possible time frame rather than allowing it to occur only once the current consent time has lapsed.
41 – Te Korowai o Ngāruahine Trust	496	Other	No relief necessary
		Submitter support Policy 26 of the Plan and the implementation of the best practicable option and suggests that the adoption of the Plan would require a section 128 review of existing wastewater consents under the RMA.	Comments noted.
43 – Royal Forest and Bird Protection Society	497	Amend	Decline
		Submitter seeks amendment of Policy 26 of the Plan to include a new clause giving priority to improving water quality in outstanding and significant areas.	The Hearing Panel notes that all General Policies (Policies 1 – 21) and relevant Activity-specific Policies need to be read together. General Policies already address the protection of outstanding and significant areas with Policy 12 being particularly relevant in that it targets areas where there are wastewater discharges that have impacted on coastal water quality and where Council will be seeking a restoration of that water quality.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel further notes Policy 25 prohibits any new wastewater discharges to the coastal marine area other than the Open Coast coastal management area (i.e. no discharges to outstanding areas or estuaries).
47 – Fonterra	498	Support	Accept
		Retain Policy 26 of the Plan as notified.	Support noted. Policy 26 is retained as notified.
48 – Taranaki District Health Board	499	Support	Accept
		Retain Policy 26 of the Plan as notified.	Support noted. Policy 26 is retained as notified.
Further submissions – Port Taranaki Ltd (32)		Support	
58 – Te Atiawa	500	Support	Accept
		Submitter supports Policy 26 and the wording “no further consent will be granted”.	Support noted. Policy 26 is retained as notified.
Policy 27 – Discharges of stormwater			
40 – Te Rūnanga o Ngāti Mutunga	501	Amend	Accept in part
		Submitter seeks amendment to Policy 27 of the Plan to include a new Clause (a)(vi) that reads: <i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i> <i>(a) adequate consideration of: [...]</i> <i>(vi) Location of discharge in relation to sensitive areas: [...]</i>	The Hearing Panel recommends amending Policy 27 by including a new clause that any discharge is of an acceptable quality having regard to the location of scheduled and other values sensitive to the effects of stormwater discharges. Other submitters have also submitted on this issue. Having regard to all the submissions, the Hearing Panel recommends that a new Clause (a)(iiiA) be included that reads as follows: <i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i> <i>(a) adequate consideration of: [...]</i> <i>(iiiA) the location of the discharge in relation to avoiding, remedying or mitigating any adverse environmental effects;</i>
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	502	Amend	Accept in part
		Submitter seeks amendment to Policy 27 of the Plan to read:	The Hearing Panel recommends amending Policy 27(a)(iii) and including a new clause that any discharge is of an acceptable quality having regard to the location of

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i></p> <p><i>(a) adequate consideration of:</i></p> <p><i>[...]</i></p> <p><i>(iii) the use of measures (which may include treatment) to prevent or minimise contamination of the receiving environment</i></p> <p>AND</p> <p>Refer to preventing discharges to any sensitive area of sites of significance.</p>	<p>scheduled values sensitive to the effects of stormwater discharges. These changes will provide the relief sought by the submitter and would read as follows:</p> <p><i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i></p> <p><i>(a) adequate consideration of: [...]</i></p> <p><i>(iii) the use of measures (includeing treatment) to prevent or minimise contamination of the receiving environment</i></p> <p><i><u>(iiiA) the location of the discharge in relation to avoiding, remedying or mitigating any adverse environmental effects;</u></i></p>
43 – Royal Forest and Bird Protection Society	503	<p>Amend</p> <p>Submitter seeks amendment to Policy 27 of the Plan to include reference to matters set out in Policy 23(1) of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Decline</p> <p>The Hearing Panel does not recommend granting the relief sought by the submitter on the basis that the issues raised are already appropriately covered in other policies. Policy 23(1) [Discharge of contaminants] of the <i>New Zealand Coastal Policy Statement</i> is appropriately covered by Policy 22 and 23 of the Plan. Policy 27 covers the requirements set out in Policy 23(4) of the <i>New Zealand Coastal Policy Statement</i>.</p> <p>As noted previously, all General Policies 1 - 21 and relevant Activity-specific Policies, including both Policies 23 and 27 of the Plan, must be read together. It is Hearing Panel' view that, in doing so, Plan policies collectively address the matters covered in Policy 23(1) of the <i>New Zealand Coastal Policy Statement</i>.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	504	<p>Support</p> <p>Retain Policy 27 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 27 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>
Further submissions – Transpower NZ Ltd (26), Port Taranaki Ltd (32)		Support	
47 – Fonterra	505	<p>Amend</p> <p>Submitter seeks amendment to Policy 27 Of the Plan to include a new Clause (d) that reads:</p> <p><i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i></p> <p><i>[...]</i></p>	<p>Accept</p> <p>The submitter generally supports Policy 27 but wishes to see reference to the implementation of the best practicable option for the treatment and discharge of stormwater into the coastal environment. The Hearing Panel recommends granting the relief sought by the submitter as it provides added certainty for Plan users as to how stormwater discharges will be managed.</p> <p>Policy 27(d) would read as follows:</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>(d) the adoption of the best practicable option for the treatment and discharge of stormwater to the coastal marine area to minimise adverse effects.</u>	<u>(d) the adoption of the best practicable option for the treatment and discharge of stormwater to the coastal marine area to minimise adverse effects.</u>
48 – Taranaki District Health Board	506	Support Retain Policy 27 as notified.	Accept Support noted. Policy 27 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
58 – Te Atiawa	507	Amend Submitter seeks amendment to Policy 27(a)(iii) and (v) of the Plan and include a new Clause (vi) to read: <i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i> <i>(a) adequate consideration of: [...]</i> <i>(iii) the use of measures (which may include including treatment) to prevent or minimize contamination of the receiving environment; [...]</i> AND <i>(v) integrated management of whole stormwater catchments and stormwater networks where appropriate.</i> AND <u><i>(vi) location of the discharge in relation to sensitive areas.</i></u>	Accept in part The submitter seeks to amend some of the wording within Policy 27 to provide more certainty for Plan users in regards to how stormwater discharge will be managed. The Hearing Panel agrees to amend Policy 27 by replacing the reference to “which may include” with “including treatment”. However, it is not considered appropriate to remove reference to “where appropriate” from the policy as it recognises that integrated management of whole stormwater catchments and stormwater networks might not always be practicable or appropriate. The Hearing Panel has noted the support from other submitters for the inclusion of a new clause that any discharge is having regard to the location of scheduled and other values sensitive to the effects of stormwater discharges. Other submitters have also submitted on this issue. Having regard to all the submissions, the Hearing Panel recommends that a new Clause (a)(iiiA) be included that reads as follows: <i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i> <i>(a) adequate consideration of: [...]</i> <i>(iii) the use of measures (including treatment) to prevent or minimise contamination of the receiving environment</i> <u><i>(iv) location of discharge in relation to avoiding, remedying or mitigating any adverse environmental effects;</i></u>

58 – Te Atiawa	508	Amend Submitter seeks amendment to Policy 27(b) of the Plan to read: <i>Discharges of stormwater to the coastal marine area will be appropriately managed by:</i> <i>[...]</i>	Decline The Hearing Panel notes that in some circumstances it is not always possible to avoid cross contamination of sewage and stormwater systems.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		(b) avoiding, where practicable, and otherwise remedying avoid cross contamination of sewage and stormwater systems; and [...]	
Policy 28 – Harmful aquatic organisms			
9 – Karen Pratt	509	Amend	Decline
		The submitter outlines the risk of offloading ballast water in productive shallow waters and seeks amendment to Policy 28 of the Plan to address ballast water.	Council recognises the risk of marine pests and diseases carried in ballast water tanks that can threaten the marine environments and seafood industries. However, the Hearing Panel does not believe it is necessary or appropriate for Council to amend Policy 28 when this matter is already separately regulated by the Ministry for Primary Industries under the <i>Import health standard – Ballast water from all countries</i> . Any Council role in such matters represents an inappropriate duplication of the Ministry for Primary Industries regulatory role.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Further submissions – Nga Motu Marine Reserve Society Inc (44)		Support	
29 – Department of Conservation	510	Amend	Accept
		Submitter supports Policy 28 of the Plan but seek minor amendment to delete the words “and scraping” from Policy 28(a). The submitter does not believe that the inclusion of “scraping” is appropriate and prefers to refer to cleaning in a more general sense, while scraping is only one specific description of cleaning that may occur.	The Hearing Panel agrees that broadening references in the Policy to refer to “cleaning” is appropriate and recommends granting the relief sought.
33 – New Zealand Defence Force	511	Support	Accept
		Retain Policy 28 as notified.	Support noted. Policy 28 is retained subject to minor amendments to remove reference to “scraping”.
Further submissions – Port Taranaki Ltd (32)		Support	
43 – Royal Forest and Bird Protection Society	512	Amend	Decline
		Submitter seeks amendment to Policy 28 of the Plan to include reference to an avoidance approach with the introduction of harmful aquatic organisms.	The submitter states that they are not convinced that the “minimise” risk approach adopted for Policy 28 is in line with protections under Policies 11 [Indigenous biological diversity (biodiversity)] and 13 [Preservation of natural character] of the <i>New Zealand Coastal Policy Statement</i> . The submitter seeks that an avoidance approach be introduced. Avoiding the introduction of all harmful aquatic organisms is certainly desirable but the Hearing Panel does not believe that a strict avoidance approach is technically achievable through RMA controls. The Hearing Panel suggests avoiding the

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			introduction of harmful aquatic organisms are matters of border control and primarily dealt with by other regulatory agencies and under other statutes such as the <i>Biosecurity Act 1993</i> . The Hearing Panel recommends that the Policy retain its focus on minimising risks on the introduction or spread of harmful species.
Policy 29 – Impacts from offshore petroleum drilling and production			
6 – Trans-Tasman Resources Ltd	513	Amend Submitter seeks amendment to Policy 29 of the Plan by deleting the reference to petroleum and include all offshore drilling and production to read as follows: <i>Policy 29: impacts from offshore petroleum drilling and production</i> <i>Activities associated with petroleum drilling and production in the coastal marine area will be managed to avoid, remedy or mitigate adverse environmental effects associated with accidental discharges by ensuring: [...]</i>	Accept The submitter wishes to see Policy 29 expanded to include non-petroleum related drilling and production activities. The Hearing Panel agree that it would be useful to expand the scope of the Policy to cover all extractive industries, not just petroleum, particularly given recent interest in seabed mining in and adjacent to the Taranaki coastal marine area. The Hearing Panel recommend granting the relief sought by deleting reference to “ <i>petroleum</i> ” in the Policy.
Further submissions – Taranaki Energy Watch (51)		Oppose	
25 – New Zealand Petroleum and Minerals	514	Support Retain Policy 29 of the Plan as notified.	Accept Policy 29 is retained subject to minor amendments as requested by other submitters that do not change the policy intent. Of note, the submitter presented on this Policy further at the hearing and, in particular, the recommendations in the Section 42A report to expand Policy 29 to include non-petroleum related drilling and production activities. At the hearing, the submitter suggested that the Policy should only apply to offshore oil and gas activities. As noted in submission point 513, it is the Hearing Panel's view that there are advantages to the Policy covering all extractive industries, not just petroleum, particularly given recent interest in seabed mining in and adjacent to the Taranaki coastal marine area.
Further submissions – Port Taranaki Ltd (32), Petroleum Exploration and Production Association of New Zealand (37)		Support	
40 – Te Rūnanga o Ngāti Mutunga	515	Amend Submitter seeks amendment to Policy 29 of the Plan to read: <i>Activities associated with petroleum drilling and production in the coastal marine area will be managed to avoid, remedy or mitigate adverse environmental effects associated with accidental any discharges by ensuring: [...]</i>	Accept The submitter wishes to see Policy refer to “ <i>any</i> ” discharge rather than “ <i>accidental</i> ” discharge. The Hearing Panel agrees that the broader coverage provided by the relief request is desirable and recommends granting the relief sought.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response

		Submitter seeks amendment to Policy 29 of the Plan to remove the word “accidental”.	The submitter wishes to see Policy refer to “any” discharge rather than “accidental” discharge. The Hearing Panel agrees that the broader coverage requested by the submitter is desirable and recommends granting the relief sought.
Further submissions – Taranaki Energy Watch (51), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
43 – Royal Forest and Bird Protection Society	517	Amend	Decline
		Submitter supports in part but seeks amendment to Policy 29 of the Plan to clarify that this policy relates to existing lawful petroleum drilling and production only and does not include new activities.	<p>The Hearing Panel suggests that it is not necessary or appropriate to differentiate between existing and new oil and gas activities. The relief sought by the submitter is based upon the Government’s decision to restrict new permits to only onshore Taranaki and that there will be no new offshore oil and gas exploration permits. However, Government direction and policies regularly change over the life of any Plan.</p> <p>The Hearing Panel therefore considers the relief sought is an unnecessary level of detail that potentially may become dated and inaccurate should this Government or successive government’s change their position. It is more appropriate that the Policy focus on effects of the activity.</p> <p>Of note, the submitter presented on this Policy further in relation to recommendations from the Section 42A report to expand Policy 29 to include non-petroleum related drilling and production activities. In particular, the submitter was concerned that the amended Policy would be unclear as to what drilling and production activities are now being referred to. As noted in submission point 513 it is the Hearing Panel’s view that there are advantages to the Policy covering all extractive industries, not just petroleum, particularly given recent interest in seabed mining in and adjacent to the Taranaki coastal marine area.</p>
51 - Taranaki Energy Watch	518	Amend	Decline
		Submitter seeks amendment to Policy 29 of the Plan to incorporate a precautionary approach.	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	The submitter is concerned that areas of the Plan relating to petroleum provisions do not reflect a precautionary approach as required by the <i>New Zealand Coastal Policy Statement</i> .
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	The Hearing Panel suggests that a precautionary approach is already adequately provided for via Policy 3 [Precautionary approach] of the Plan. Policy 3 is a General Policy that applies to all activities, including oil and gas industries, within the coastal environment and regardless of which coastal management area the activity may fall within. The Hearing Panel further notes that the potential risks associated with oil and gas exploration and production activities are well understood. For this reason, it is unnecessary to repeat the provisions of Policy 3 within Policy 29. In the main, oil and gas exploration and production activities in the coastal marine area are regulated as discretionary or non-complying activities. Therefore, through the consenting process the Council will consider any application on a case-by-case basis and apply relevant policies that include the adoption of a precautionary approach to ensure the appropriate management of all adverse environmental effects.
58 – Te Atiawa	519	Amend	Accept
		Submitter seeks amendment to Policy 29 of the Plan to read: <i>Activities associated with petroleum drilling and production in the coastal marine area will be managed to avoid, remedy or mitigate adverse environmental effects associated with accidental any discharges by ensuring: [...]</i>	The submitter wishes to see Policy refer to “any” discharge rather than “accidental” discharge. The Hearing Panel agrees that the broader coverage requested by the submitter is desirable and recommends granting the relief sought.
Further submissions – Taranaki Energy Watch (51)		Support	
Policy 30 – Discharge of contaminants to air			
9 – Karen Pratt	520	Other	No relief necessary
		Submitter seeks that the Council review Policy 30 of the Plan to consider its adequacy for addressing heavy fuel emissions resulting from any potential iron sand mining that might occur in the territorial waters.	The submitter has not expressly sought amendments to Policy 30 but clearly has concerns around potential adverse effects arising from heavy fuel emissions resulting from any potential iron sand mining that might occur in the Exclusive Economic Zone that warrant a response.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	The Hearing Panel notes that in the development of the Policy 30 (and other policies), the Council has carefully considered the various types and levels of use and development in the coastal marine area. The Hearing Panel is satisfied that the Policy appropriately captures all discharges to air in the coastal marine area, including those

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			associated with potential sand mining, and provides an appropriate level of direction in the management of adverse effects.

Policies 31 to 39 – Structures			
41 – Te Korowai o Ngāruahine Trust	531	Amend	No relief necessary
		Submitter seeks amendment to Policies 31 to 39 [Structures] of the Plan to recognise the <i>Takutai Moana Act 2011</i> and the extent to which structures prejudice Māori customary and protected rights along the coastline and to include references to Schedule 5B [Sites of significance].	The Hearing Panel notes that Policy 32(d)(iv) already includes reference to structures being designed, located and managed so as to avoid, remedy or mitigate adverse effects on the environment and associated uses and values. Further policy direction is provided in Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] that direct how effects on sites of significance need to be managed. Both policies (plus any other relevant General Policies) must be read to together. The Hearing Panel therefore does not consider it necessary to repeat the provisions of another policy as it will not provide greater protection than is already given. Reference to Schedule 5B is also given in the appropriate policies.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
58 – Te Atiawa	532	Amend	No relief necessary
		Submitter seeks amendment to Policies 31 to 39 [Structures] of the Plan to include reference to Schedule 5B (and recognition of the <i>Takutai Moana Act</i>	The Hearing Panel notes that Policy 32(d)(iv) already includes reference to structures being designed, located and managed so as to avoid, remedy or mitigate adverse

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		2011) to provide assurance that structures are not placed within the sites of significance.	effects on the environment and associated uses and values. Further policy direction is provided in Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] that direct how effects on sites of significance need to be managed. Both policies (plus any other relevant General Policies) must be read to together. The Hearing Panel therefore does not consider it necessary to repeat the provisions of another policy as it will not provide greater protection than is already given. Reference to Schedule 5B is also given in the appropriate policies.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
Policy 32 – Placement of structures			
6 – Trans-Tasman Resources Ltd	533	Support	Accept
		Submitter supports the recognition in Policy 32(e) of the Plan that in some circumstances it is not appropriate to make structures available for public or multiple use.	Support noted. Policy 32(e) is retained as notified.
12 – Chorus New Zealand Ltd	534	Support	Accept
		Retain Policy 32 of the Plan as notified.	Support noted. Policy 32 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
13 – Spark New Zealand Trading Ltd	535	Support	Accept
		Retain Policy 32 of the Plan as notified.	Support noted. Policy 32 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

		Retain Policy 32 of the Plan as notified.	Support noted. Policy 32 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
26 – Transpower NZ Ltd	537	Amend	Grant in kind
		Submitter seeks amendment to Policy 32(a) of the Plan to read: <i>Structures in the coastal marine area:</i> <i>(a) will generally be limited to those that have a functional need <u>or technical, operational and/or locational requirement</u> to be located in the coastal marine area</i>	The submitter wishes that the Policy clearly recognise the technical, operational and/or locational requirement for an activity to be located in the coastal marine area. The Hearing Panel recommends granting an alternative relief to that sought by the submitter by amending Policy 32(a) to reference 'functional need' or 'operational need'. These terms, which are defined in the Plan and also in the <i>National Planning Standards</i> , include technical, operational and locational constraints. This amendment

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>and that do not cause duplication of a function for which existing structures or facilities are adequate; [...]</i>	will give effect to Policy 3 of the <i>New Zealand Coastal Policy Statement</i> which requires consideration of the constraints imposed by technical and operational requirements. The term functional need or operational has also been used elsewhere in Plan provisions. The amended Policy 32(a) would read as follows: <i>(a) must generally be limited to those that have a functional need <u>or operational need</u> to be located in the coastal marine area and that do not cause duplication of a function which existing structures or facilities are adequate [...].</i>
37 – Petroleum Exploration and Production Association of NZ	538	Amend Submitter seeks amendment to Policy 32(f) of the Plan to read: <i>Structures in the coastal marine area:</i> <i>[...]</i> <i>(f) where appropriate, should be made of, or finished with, materials that are <u>visually and aesthetically compatible with</u> <u>minimise effects on the character and visual amenity</u> of the adjoining coast.</i>	Accept The submitter seeking a more directive approach with regards to Policy 32(f). The current wording is considered subjective and it is suggested that the proposed relief would provide clarity to the policy. The Hearing Panel agrees and recommends granting the relief sought.
Further submissions – Taranaki Energy Watch (51)		Support in part	
41 – Te Korowai o Ngāruahine Trust	539	Amend Submitter seeks amendment to Policy 32 of the Plan to include reference to Schedule 5B and ensure that structures are not placed within the sites of significance.	Decline The submitter would preclude the placement of any structure within sites of significance. Given that structures may occur at various scales, in various forms, and purposes (including beneficial), and that the placement of the structure within sites of significance will not necessarily have adverse effects on this site (recognising that some structures may also be a site of significance, e.g. tauranga waka, or facilitate Māori customary uses e.g. mahinga kai), Hearing Panel recommend no change. The Hearing Panel notes that Policy 32 must be read in conjunction with each other relevant policies, including all the General Policies. Reference to Schedule 5B is appropriately referenced within Policy 15 and would require any structure to avoid significant adverse effects, and avoid, remedy and mitigate any other adverse effects on the values associated with sites of significance to Māori identified in Schedules 5A and 5B.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	540	<p>Amend</p> <p>Submitter seeks amendment to Policy 32 of the Plan to clarify that this policy is subject to the protective policies giving effect to the <i>New Zealand Coastal Policy Statement</i></p> <p>AND</p> <p>Amend Policy 32(d) to read:</p> <p><i>Structures in the coastal marine area: [...]</i></p> <p><i>(d) will be designed, located and managed:</i></p> <p><u>A. to avoid adverse effects in accordance with policies 8, 9, 14 [list policies that give effect to Policies 11, 13 and 15 of the New Zealand Coastal Policy Statement]; and</u></p> <p><u>B. so as to avoid, remedy or mitigate:</u></p> <p><i>(i) any [...].</i></p>	<p>Decline</p> <p>Section 5.1 explains that the policies apply to all activities within the coastal environment, regardless of which coastal management area the activity may fall within. Thus, Policy 32 must be read in conjunction with each of the other relevant policies, including all the General Policies. Together these policies address the matters covered in the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel therefore recommends declining the relief sought on the basis that the issue raised by the submitter has already been covered within other provisions of the Plan.</p>
45 – Powerco	541	<p>Support</p> <p>Retain Policy 32 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 32 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	542	<p>Support</p> <p>Retain Policy 32 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Policy 32 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.</p>
47 – Fonterra	543	<p>Amend</p> <p>Submitter support Policy 32 recognising and providing for structures in the coastal marine area that have an operational requirement to be located in the coastal environment but seeks amendment so that Policy 32(a) is not limited to those activities that have a functional need only. Submitter seeks amendment to Policy 32(a) of the Plan to read:</p> <p><i>Structures in the coastal marine area:</i></p> <p><i>(a) will generally be limited to those that have a functional need <u>or operational requirement</u> to be located in the coastal marine area and that do not cause duplication of a function for which existing structures or facilities are adequate; [...]</i></p>	<p>Accept</p> <p>The Hearing Panel agrees with the submitter to amend the Policy to cover “operational needs” alongside “functional needs”. The amended Policy would provide for structures that are not required to be located within the coastal marine area, however, their operational requirements or constraints justify their presence there.</p> <p>In order to maintain consistency with terms adopted in the <i>National Planning Standards</i>, the Hearing Panel recommends that the term “operational need” be adopted rather than “operational requirement”.</p> <p>The amended Policy would read as follows:</p> <p><i>Structures in the coastal marine area:</i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Trans-Tasman Resources Ltd (6)		Support	<i>(a) must generally be limited to those that have a functional need <u>or operational need</u> to be located in the coastal marine area and that do not cause duplication of a function for which existing structures or facilities are adequate; [...]</i>
57 – Heritage New Zealand	544	Amend The submitter identifies that the placement of structures has the potential to adversely affect historic heritage and wishes to include cross-reference to Policy 15 [Historic heritage] within Policy 32. Submitter seeks amendment to Policy 32 of the Plan to manage potential adverse effects of the placement of hard protection structures to historic heritage by adding a further point: <u>(g) will manage adverse effects on historic heritage in accordance with Policy 15.</u>	Decline The Hearing Panel notes that the preamble to Section 5.1 explains that the policies apply to all activities within the coastal environment, regardless of which coastal management area the activity may fall within. Thus, Policy 32 must be read in conjunction with each of the other relevant policies, including all the General Policies. Together these policies address the matters covered in the <i>New Zealand Coastal Policy Statement</i> . The Hearing Panel therefore recommends declining the relief sought as historic heritage matters are already adequately addressed under other provisions of the Plan.
Policy 33 – Hard protection structures in coastal areas of outstanding value			
43 – Royal Forest and Bird Protection Society	545	Amend Submitter seeks amendment to Policy 33 to read: <i>Hard protection structures located within the coastal management area – Outstanding Value (identified in Schedule 2) will not have an adverse effect on the values and characteristics, <u>including those</u> identified in Schedule 2, that contribute to an area having outstanding value, in accordance with Policy 8.</i>	Decline The submitter does not believe that all of the values or characteristics contributing to the outstanding natural character of the identified areas are identified within Schedule 2. Therefore, the Policy is limited to only providing for those identified in Schedule 2 and not achieving the appropriate protection required by Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> . The Hearing Panel agrees that there are broader considerations than just those values identified in Schedule 2, however, these considerations are separately provided for under other General Policies of the Plan that, in turn, give effect to Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> . The wording of Policy 33 is consistent with Policy 8 [Areas of outstanding value] of the Plan in that the avoidance of adverse effects relates to specific scheduled values identified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Policy 33A			
43 – Royal Forest and Bird Protection Society	546	Amend Submitter seeks amendment to the Plan to include a similar policy to Policy 33 to address hard protection structures and adverse effect on sites and areas with significant values identified under Policy 14 of the Plan.	Decline The submitter seeks the addition of a new policy to manage the adverse effects of hard protection structures on significant indigenous biodiversity values identified in Policy 14 of the Plan.
Further submissions – Port Taranaki Ltd (32)		Oppose The Hearing Panel recommends declining the relief sought. It is suggested that the protection of significant indigenous biodiversity from the adverse effects of hard protection structures are adequately addressed under other provisions of the Plan and do not require repeating. Section 5.1 explains that the policies apply to all activities within the coastal environment, regardless of the activity to be authorised and which coastal management area the activity may fall within. Policy 33 must therefore be read in conjunction with each of the other relevant policies, including all the General Policies. Together these policies address the matters covered in the <i>New Zealand Coastal Policy Statement</i> .	
Policy 34 – Appropriateness of hard protection			
47 – Fonterra	547	Amend Submitter seeks to expand Policy 34 to include regionally important “ <i>industry</i> ” alongside infrastructure in order to encompass the hard protection structures of industries within the region. Submitter seeks amendment to Policy 34 of the Plan to read: <i>Hard protection structures will be discouraged and the use of alternatives promoted, whilst recognising that hard protection structures may be the only practical means to protect existing nationally and regionally important <u>industry and infrastructure</u>. [...]</i>	Grant in kind The Council is seeking to manage the risk of hard protection works becoming more prevalent along the Taranaki coastline with associated risks that coastal natural character, amenity values and public access is degraded over time. Accordingly, Policy 34 seeks to generally discourage the use of hard protection structures in the coastal marine area. The submitter has highlighted an issue whereby the Policy reference to “ <i>regionally important infrastructure</i> ” is problematic in that it excludes some activities and arguably repeats consideration matters covered in Clause (e), which refer to the national and regional importance of existing infrastructure, use or value at threat. The Hearing Panel proposes an alternative relief whereby reference to regionally important infrastructure (and its limited scope) is deleted and instead the Policy will rely on Clause (c) which has a much broader application and would cover the hard protection structure that would encompass protecting the Whareroa discharge outfall. At the hearing, the submitter presented further on Policy 34 and provided two alternative amendment suggestions. The Hearing Panel considers that the

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			amendments suggested are not necessary and that Clause (a) – (g) sufficiently provide for the needs of the submitter (and others).
57 – Heritage New Zealand	548	Amend Submitter seeks amendment to Policy 34 of the Plan to read: <i><u>(h) the management of adverse effects on historic heritage in accordance with Policy 15.</u></i>	Decline The submitter identifies that the placement of hard protection structures has the potential to adversely affect historic heritage and wishes to include cross-reference to Policy 15 [Historic heritage] within Policy 34. The Hearing Panel recommends declining the relief sought as such matters are already adequately addressed under other provisions of the Plan and does not require repeating or selective cross-referencing to particular General Policies. The Hearing Panel notes that the preamble to Section 5.1 explains that the policies apply to all activities within the coastal environment, regardless of which coastal management area the activity may fall within. Policy 33 must therefore be read in conjunction with each of the other relevant policies, including all the General Policies. Together these policies address the matters covered in the <i>New Zealand Coastal Policy Statement</i> .

		Retain Policy 38 of the Plan as notified.	Support noted. Policy 38 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
25 – New Zealand Petroleum and Minerals	569	Amend	Accept in part
		Submitter seeks amendment to Policy 38 of the Plan to recognise additional considerations and to read as follows: <i>Structures will be removed from the coastal marine area at the expiry of their authorisation or at the end of their useful life, unless one or more of the following applies:</i> [...] <u>(d) the removal of the structure poses unreasonable costs or is technically unfeasible; or</u> <u>(e) the removal of the structure poses unreasonable risk on human health and safety.</u>	The submitter is concerned that part of the Policy is limiting and does not allow for other matters such as unreasonable costs or health and safety concerns to be considered alongside environmental effects as exceptions to requiring the removal of structures in the coastal marine area. The Policy does not explicitly provide for the use of industry best practice tools to determine the best practicable environmental outcome. The Hearing Panel notes that the removal of new structures are generally considered at the time of the application of a consent and with the consent being granted once the technical, financial and safety aspects have been considered. However, some older structures may have received consents before this became standard practice. It is therefore considered appropriate to ensure that the Council is not trying to require structures to be removed where it would be technically unfeasible and/or there would be a risk to human health and safety.
		Support in part	The relief sought by the submitter has three parts. The Hearing Panel agrees with the submitter to amend the Policy so that technical considerations and public health risks are reasonable considerations where Council might not require the structure to be removed. However, following pre-hearing discussions with the Department of Conservation, the Hearing Panel does not consider that the imposition of unreasonable cost is an acceptable reason for not removing a structure and expect these considerations to be addressed when the consent to place or erect the structure is sought. At the hearing, the submitter presented further on this issue and sought the inclusion of a new clause (f) to the effect that removal of all or part of a structure is not required if the retention of all or part of the structure has either beneficial or minimal adverse effects on marine ecology and coastal processes. However, it is the view of the Hearing Panel that the matters set out in Policy 38 already provides for this and the

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			new clause is not necessary. For example, retention of a structure below the seabed maybe entirely appropriate and has been provided for under Cause (a) as the disturbance to the seafloor in removing that structure is likely to cause greater adverse effects on the environment than leaving it in place.
32 – Port Taranaki	570	Amend Submitter seeks amendment to Policy 38 of the Plan to provide an exception to this policy for new port structures intended to be permanent.	Accept The Hearing Panel recommends granting the relief sought by the submitter. The Hearing Panel recognises that some (but not all) Port structures may be designed and built to be permanent. In such situations it is appropriate that there is no obligation to remove these “ <i>permanent structures</i> ”. The Hearing Panel recommends amending Policy 38 to include a new Clause (c) (plus other consequential amendments) to allow considerations for material to be left <i>in situ</i> or elsewhere in the coastal marine area where the structure, or part of the structure, is intended to be permanent, e.g. new Port structures. Policy 38 would read as follows: <i>Policy 38 removal of coastal structures</i> <i>Decommissioning and removal of any new structure <u>must be considered</u> as part of the initial design and installation <u>and removal will generally be required.</u></i> <i><u>When assessing the appropriateness of allowing a structure, a part of a structure, or material associated with a structure to be left in situ or elsewhere in the coastal marine area, at least one of the following must apply: [...]</u></i> <i><u>(c) the structure, or part of the structure, is permanent or has a reuse value that is considered appropriate in accordance with Policy 5; [...]</u></i>
37 – Petroleum Exploration and Production Association of NZ	571	Amend Submitter seeks amendment to Policy 38 of the Plan to read: Structures will be removed from the coastal marine area at the expiry of their authorisation or at the end of their useful life, unless Applications to abandon material in situ or elsewhere in the coastal marine area can be made if one or more of the following applies [...]	Grant in kind The submitter has issue with Policy 38 in that the original wording is arguably ambiguous and could mean that the Council imposes a requirement to leave the structure if an item on the list is triggered. The submitter recommends some word changes to clarify the Policy's intent. The Hearing Panel recommends granting an alternative relief to that sought by the submitter with minor word changes to align the wording with other provisions within the Plan.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	588	Amend	No relief necessary
		Submitter seeks amendment to Policy 41 of the Plan to clarify that natural values includes significant indigenous biodiversity consistent with Policy 14.	<p>The submitter is concerned that Policy 41, as currently worded, implies a potential for trading off adverse effects on some environmental values to enhance others and where the activity is for public benefit. The submitter considers “<i>appropriate management</i>” uncertain and is concerned that this Policy is in conflict with Policy 14 [Indigenous biological diversity].</p> <p>The Hearing Panel notes that the policy direction to enable disturbance, deposition or extraction activities that provide public or environmental benefit is subject to the appropriate management of adverse effects. This requires the activity to be managed in a manner consistent with the directions set out in the General Policies 1 to 21.</p> <p>Policy 41 must be read in conjunction with other of the relevant policies, including all the General Policies. Together these policies address the matters sought by the submitter, including those relating to the protection of significant indigenous biodiversity.</p> <p>In relation to amendments to the Policy to clarify that natural values include indigenous biodiversity, the Hearing Panel considers no relief is necessary. However, the Panel recommends minor amendments to Policy 41 to address relief sought by the submitter in submission point 555.</p>

41 – Te Korowai o Ngāruahine Trust	594	Other	No relief necessary
		Submitter seeks confirmation that Policy 42 of the Plan does not relate to commercial activity.	<p>The submitter is not seeking a change to the Plan but presumes that the Policy does not apply to large-scale commercial activities (and their appropriateness) in the coastal marine area.</p> <p>The Hearing Panel notes that the Plan must necessarily address commercial and non-commercial activities. Accordingly, Policy 42 could be applied to commercial activities.</p> <p>It is the view of the Hearing Panel that Policy 42 does not need to differentiate activities according to whether or not they are a commercial activity but rather focus on the range of environmental effects that the activity might result in. This is considered appropriate and a better management practice than merely regulating the activities for commercial ventures. Notwithstanding the above, the Hearing Panel notes that large scale commercial activities that cause disturbance of the foreshore and seabed will generally be of a scale or type that trigger certain rules and consenting requirements. However, even small commercial activities and non-commercial activities can be of a size, type or in a location that need to be managed in a manner that has regard to the sensitivity of the site specific values present plus the other matters set out in Policy 42.</p>
43 – Royal Forest and Bird Protection Society	595	Amend	Decline
		Submitter seeks amendment to Policy 42 of the Plan to ensure activities avoid adverse effects as required by Policies 11, 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> .	<p>The Hearing Panel suggests that the submitter's concerns have already been provided for within the Plan and recommend declining the relief sought.</p> <p>As stated in the preamble of Section 5.1, Policy 42 must be read in conjunction with each of the other relevant policies, including all the General Policies and Policies 11, 13 and 15. 			necessary to refer to indigenous biodiversity throughout the Policies when a standalone Policy provides the required protection already.
55 – Kiwis Against Seabed Mining	596	Amend Submitter seeks amendment to Policy 42 of the Plan, as the interpretation of "disturbance" does not relate to commercial activity.	Decline The Hearing Panel recommends declining the relief sought by the submitter as Plan provisions must necessarily address all activities in the coastal marine area, irrespective of whether they are commercial or not. It is not the intent of the Plan to preclude appropriate commercial use and development. It is the view of the Hearing Panel that Policy 42 should focus on environmental effects rather than presumptions on the appropriateness of activities based on whether they are commercial or not. The Hearing Panel notes that commercial activities that cause disturbance of the foreshore and seabed will generally be of a scale or type that trigger certain rules and consenting requirements. However, even small commercial activities and non-commercial activities can be of a size, type or in a location that need to be managed in a manner that has regard to the sensitivity of the site specific values present plus the other matters set out in Policy 42.

57 – Heritage New Zealand	598	Amend Submitter seeks amendment to Policy 42 of the Plan to read:	No relief necessary

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><i>Activities that cause disturbance of the foreshore or seabed will:</i></p> <p><i>[...]</i></p> <p><i>(c) avoid, remedy or mitigate other adverse effects – <u>including adverse effects on historic heritage (refer to Policy 15)</u>; and [...]</i></p>	<p>The Hearing Panel recognises the concern of the submitter but suggests that their concerns have already been provided for within the Plan.</p> <p>As stated in the preamble of Section 5.1, Policy 42 must be read in conjunction with each of the other relevant policies, including all the General Policies and Policy 15. Together these policies address the matters sought by the submitter, including those relating to the protection of historic heritage. It is not necessary to refer to historic heritage throughout the policies when a stand-alone Policy provides the required protection already.</p>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
58 – Te Atiawa	599	<p>Other</p> <p>Submitter seeks confirmation that the disturbance referred to in Policy 42 of the Plan is covered by Policies 40, 41, 43 and 44 and does not relate to commercial activity.</p>	<p>No relief necessary</p> <p>The submitter seeks confirmation that disturbance referred to in Policy 42 is covered by Policies 40, 41, 43 and 44. The Hearing Panel notes that which policies apply will depend upon the activity (e.g. if the activity is not occurring in the Port then Policy 43 does not apply). However, all policies must be read together. All General Policies 1 to 21 plus any relevant Activity-specific Policies will be considered together.</p> <p>In relation to the Policy excluding commercial activities, the Hearing Panel notes that neither the policies, nor the rules, differentiate activities according to whether or not they are a commercial activity. Instead, Plan provisions focus on the range of effects that the activity will result in. This is considered appropriate and a better management practice than merely regulating the activities for commercial ventures.</p> <p>Notwithstanding the above, the Hearing Panel notes that commercial activities that cause disturbance of the foreshore and seabed will generally be of a scale or type that trigger certain rules and consenting requirements. However, even small commercial activities and non-commercial activities can be of a size, type or in a location that need to be managed in a manner that has regard to the sensitivity of the site specific values present plus the other matters set out in Policy 42. It is, therefore, preferable not to limit any policies or rules to commercial activities only and a broader approach captures all activities.</p>
Policy 43 – Port dredging

Policy 44 – Extraction or deposition of material			
6 – Trans-Tasman Resources Ltd	603	Support	Accept
		Submitter supports Policy 44 (with the exception of Clause (f)) of the Plan as providing appropriate policy support and guidance for extraction and deposition activities in the coastal marine area.	General support for Policy 44 noted. Issues raised regarding Clause (f) are discussed in the following submission point.
Further submissions – Department of Conservation (29), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
6 – Trans-Tasman Resources Ltd	604	Amend	Decline
		Submitter seeks amendments to Policy 44 of the Plan to delete Clause (f): <i>Extraction of sand, shingle, shell and other natural material from the foreshore or seabed, or deposition of material on the foreshore or seabed, not provided for by Policies 39, 40, and 42 should: [...]</i> <i>(f) where applicable and appropriate, ensure that the deposited material is of a similar size, sorting and parent material as the receiving sediments”.</i>	The submitter considers Clause (f) to be too subjective and provides no guidance as to when it may be applicable and appropriate to impose size and sorting requirements on the deposited material. Further, the submitter believes that there may be a range of circumstances when such requirements may not be appropriate. The Hearing Panel notes that Policy 44(f) includes a qualifier that, where applicable and appropriate, the deposition of material from any extractions from the foreshore or seabed must be of a similar size, sorting and parent material as the receiving sediments. As a general requirement, this is considered reasonable and appropriate. However, through the consenting process there is an opportunity to consider on a case-by-case basis any circumstances where such requirements may not be applicable or appropriate and set conditions relating to sizing and sorting requirements (after also referring to other policies that may be relevant).
9 – Karen Pratt	605	Amend	Accept in part
		Submitter seeks amendments to Policy 44 of the Plan to include additional considerations and read as follows: <i>Extraction of sand, shingle, shell and other natural material from the foreshore or seabed, or deposition of material on the foreshore or seabed, not provided for by Policies 39, 40, and 42 should: [...]</i> <i>(c) generally not occur in close proximity to moderate to high relief offshore reefs;</i> <i>(d) have regard to unique geological features that drive benthic primary production in the South Taranaki Bight [...]</i>	The submitter wishes to 'strengthen' Policy 44 by including a new clause to acknowledge biodiversity 'hot-spots' that are moderate to high relief reefs known by the local community of divers and recreational fishermen. Conversely, Submitter (6) argued at the hearing against reference to “close proximity” and “moderate to high relief offshore reefs” on the basis that the terms were uncertain (and instead only refer to those reefs identified as outstanding in Schedule 2 of the Plan). The Hearing Panel agrees that there is merit in amending the Policy to generally require that the extraction or deposition of material on the seafloor (not otherwise

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	<p>provided for by Policies 40, 41 and 43) not to occur in close proximity to moderate or high relief offshore reefs. The Hearing Panel further notes that there are potentially many such reefs in the Taranaki coastal marine area other than those few identified in Schedule 2 that also merit protection. Issues raised by submitter (6) relating to the lack of certainty are able to be adequately addressed through the consenting process.</p> <p>The Hearing Panel recommends amending Policy 44 to include a new Clause (c) that reads as follows:</p> <p><i>Extraction of sand, shingle, shell and other natural material from the foreshore or seabed, or deposition of material on the foreshore or seabed, not provided for by Policies 39, 40, and 42 should:</i></p> <p>[...]</p> <p><i>(ba) not occur close to moderate or high relief offshore reefs;</i></p> <p>In regards to the requested Clause (d), “unique geological features that drive benthic primary habitat” is already implicitly addressed in (a) and there is no advantage to confining the consideration of such matters to the South Taranaki Bight. The Hearing Panel declines the request as Clause (a) as currently worded provides a wider protection.</p>
Further submissions –Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Nga Motu Marine Reserve Society Inc (44). Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	606	Amend Submitter seeks amendments to Policy 44 of the Plan to exclude areas identified in Schedules 2, 4A and 4B, 5A and 5B and 6 plus areas subject to a crown application or settlement under the <i>Takutai Moana Act 2011</i> .	Decline The Hearing Panel notes that the relief sought would exclude any extraction or deposition of natural material from the foreshore and seabed from most if not all of the Taranaki coastal marine area regardless of the size of the activity and regardless of whether there are any environmental effects. For example, the whole coastal marine area is currently subject to a Crown application or settlement under the <i>Takutai Moana Act 2011</i> . The Hearing Panel recognises that there are areas where the extraction or disposition of material on the foreshore or seabed would clearly be inappropriate having regard to the values and sensitivity of the receiving environment. Further, policy direction is provided in the General Policies relating to the protection, maintenance and/or enhancement of particular values and uses plus the rules themselves may include standards, terms and conditions that would exclude the activity from areas identified in Schedules 2, 4A, 4B, 5A, 5B and 6. All Plan provisions need to be read together and in their entirety. They include the General Policies, relevant Activity-specific Policies, and the rules (which address the type, scale and location of the activity). Some extraction and deposition activities are

43 – Royal Forest and Bird Protection Society	611	Amend	Accept in part
		Submitter seeks amendment to Policy 45(a) and (b) of the Plan to refer to “functional need” so that this can be guided by Policy 5 in the Plan.	<p>The Hearing Panel recommends granting part of the relief sought by the submitter by amending Policy 45(b) to refer to “functional need”.</p> <p>With regards to also including the term in Policy 45(a), the Hearing Panel recommends declining that part of the relief sought given that all the policy clauses apply and it is not considered necessary to again refer to functional need in Clause (a).</p> <p>The amendment would read as follows:</p> <p>(b) <i>there is a functional need or operational need for the activity to be located in or adjacent to the coastal marine area</i></p>
43 – Royal Forest and Bird Protection Society	612	Amend	Grant in kind
		<p>The submitter considers Policy 45 to be uncertain in relation to determining “appropriateness”. It is the submitter's view that the <i>New Zealand Coastal Policy Statement</i> requires plans to provide direction in inappropriate locations/places.</p> <p>Submitter seeks amendment to Policy 45 of the Plan by including a new clause that states that the activity will be in an appropriate location.</p>	<p>At the hearing of submissions, the submitter identified an alternative relief that would address the concerns raised. The Hearing Panel considers the proposed relief to be appropriate as it clarifies the intent of the Policy to provide a number of considerations that need to be weighed against other policies of the Plan. The Hearing Panel notes that Policy 45 needs to be read in conjunction with all of the general policies and other relevant activity policies.</p> <p>The Hearing Panel recommend amending Policy 45 to read:</p> <p><i>Consider reclamation or drainage of land in the coastal marine area <u>only in circumstances</u> where: [...]</i></p>
43 – Royal Forest and Bird Protection Society	613	Amend	Decline
		Submitter seeks amendment to the Plan (Policy 5) to clarify that the activity in Policy 45 is subject to the protective policies in giving effect to the <i>New Zealand Coastal Policy Statement</i> .	<p>As stated in the preamble of Section 5.1, Policy 42 must be read in conjunction with each of the other relevant policies, including all the General Policies. Together these Policies provide for and give effect to the <i>New Zealand Coastal Policy Statement</i>. Therefore, it is not necessary or appropriate to reference other Policies within the Plan or Policies within the <i>New Zealand Coastal Policy Statement</i>.</p>
59 – KiwiRail	614	Support	Accept
		Retain Policy 45 of the Plan as notified.	Support noted. Policy 45 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Policy 46 – Design of reclamation			
43 – Royal Forest and Bird Protection Society	615	Amend Submitter seeks amendment to Policy 46 of the Plan to provide for protection required by Policies 11, 13 and 14 of the <i>New Zealand Coastal Policy Statement</i> OR Alternatively retain Policy 46 as worded and amend Policies 5 and 45 as per the relief sought by the submitter in relation to those policies.	Accept in part The Hearing Panel suggests that the submitter's concerns have already been provided for within the Plan. As stated in the preamble of Section 5.1, Policy 46 must be read in conjunction with each of the other relevant policies, including all the General Policies, which address the natural character and indigenous biodiversity policies of the <i>New Zealand Coastal Policy Statement</i> referred to by the submitter. It is not necessary to continuously refer to indigenous biodiversity or natural character value throughout the Policies when General Policies already provide for the required protection. Notwithstanding the above, refer to submission points 281 and 607 for recommendations relating to granting in part reliefs sought by the submitter in relation to Policies 5 and 45 of the Plan.
Further submissions – Port Taranaki Ltd (32)		Oppose/Support in part	
57 – Heritage New Zealand	616	Amend Submitter seeks amendment to Policy 46 of the Plan by adding a new Clause (d) to read: <i>Subject to Policy 45, the design and form of any reclamation of land in the coastal marine area will:</i> [...] <u>(d) manage adverse effects on historic heritage in accordance with Policy 15.</u>	No relief necessary The Hearing Panel acknowledges the concerns of the submitter but suggest that their concerns have already been provided for within the Plan. As stated in the preamble of Section 5.1, Policy 42 must be read in conjunction with each of the other relevant policies, including all the General Policies and Policy 15. Together these policies address the matters sought by the submitter, including those relating to the protection of historic heritage. The Hearing Panel suggests that it is not necessary to refer to historic heritage throughout the policies when a stand-alone Policy provides the required protection already.
Policy 47 – Taking and use of coastal water			
6 – Trans-Tasman Resources Ltd	617	Support Submitter supports recognition in Policy 47 of the Plan that it is appropriate to take and use coastal water provided there are no adverse environmental effects.	Accept Support noted. Policy 47 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
33 - New Zealand Defence Force	618	Amend Submitter seeks amendment to Policy 47 of the Plan to ensure a connection between the policy and rule framework and to allow the taking and use of coastal water at a rate and volume where the taking results in an acceptable level of environmental effect.	Accept Submitter is concerned that Policy 47, as drafted, requires all adverse effects relating to the taking of coastal waters to be avoided. The submitter considers such a requirement impractical and in conflict with Rule 65 of the Plan. The Hearing Panel agrees and recommends granting the relief sought by the submitter by amending Policy 47 (plus minor inconsequential changes to align policy language with reliefs granted elsewhere) to read: <i>Allow the taking and use of coastal water and any taking of heat or energy from coastal water <u>subject to it being taken in a quantity or at a rate and in a manner that avoids, remedies or mitigates</u> adverse environmental effects..</i>
43 – Royal Forest and Bird Protection Society	619	Support Retain Policy 47 of the Plan as notified.	Accept Support noted. Policy 47 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
Further submissions – Port Taranaki Ltd (32)		Support	
Policy 48 – Damming or diversion of coastal water			
43 – Royal Forest and Bird Protection Society	620	Amend The submitter does not believe that the use of “should” provides certainty and wishes to use “will” as a stronger directive. Submitter seeks amendment to Policy 48 of the Plan to read: <i>Damming or diversion of coastal water <u>will</u> should not cause adverse environmental effects.</i>	Decline The Hearing Panel notes that Policy 48, as currently worded, states that the general course of action is that any damming or diversion of coastal waters do not cause adverse environmental effects. However, the Policy also recognises that, in some circumstances, some adverse effects might be acceptable, especially if such effects are minor or transitory. The amendment sought by the submitter would preclude such considerations and would be unnecessarily excessive.
Policy 49 – Noise and vibration			
9 – Karen Pratt	621	Amend Submitter seeks amendment to Policy 49 of the Plan to adopt the same precautionary principles applied by the Environmental Protection Authority by adopting similar wording to Condition 10 for the Trans-Tasman Resources consent for ironsand mining and which states that there be “...no adverse effects	No relief necessary The Hearing Panel recognises the concerns of the submitter in regards to the protection of blue whales, mammals in the threat classification, or on the IUC red list. The Hearing Panel notes that Policy 44 [Extraction or deposition of material] would require the consideration of such matters and, consistent with the <i>New Zealand</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>at a population level' on blue whales, mammals in the threat classification, or on the IUC red list".</i>	<p><i>Coastal Policy Statement</i>, would require such activities to avoid adverse effects at a population level on blue whales and any other mammals in the threat classification, or on the IUC red list.</p> <p>The Hearing Panel further notes that Policy 14 (plus the other General Policies) would also be considered in conjunction with Policy 49, which is specific to noise and vibration activities in the coastal marine area. Therefore, it is not necessary to amend Policy 49 as the concerns raised are already adequately addressed within other areas of the Plan.</p>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose

33 - New Zealand Defence Force	622	Support	Accept
		Retain Policy 49 of the Plan as notified.	Support noted. Policy 49 is retained subject to minor amendments as requested by another submitter that does not change the policy intent.
Further submissions – Port Taranaki Ltd (32)		Support	
43 – Royal Forest and Bird Protection Society	623	Amend	Accept in part
		<p>Submitter seeks amendment to Policy 49 of the Plan to read:</p> <p><i>Noise and vibration from activities undertaken in the coastal marine area, including underwater activities, will be managed to minimise adverse environmental effects.</i></p> <p><i><u>(a) avoid adverse effects on marine mammals and fish species consistent with policies 8, 9 and 14; and</u></i></p> <p><i><u>(b) be managed to avoid, remedy or mitigate other minimise adverse environmental effects.</u></i></p>	<p>There are two parts to the relief sought by the submitter,</p> <p>First, the submitter seeks explicit references to the avoidance of adverse effects on marine mammals and fish species that is consistent with Policies 8, 9 and 14. The Hearing Panel recommends declining this part of the relief sought given that this matter has already been addressed elsewhere in the Plan.</p> <p>The Hearing Panel notes that Policy 14 [Significant indigenous biodiversity] (plus the other General Policies) would be considered in conjunction with Policy 49, which is specific to noise and vibration activities in the coastal marine area. Therefore, it is not necessary to amend Policy 49 as the sought relief has already been addressed within other areas of the Plan.</p> <p>Second, the submitter seeks amendment to Policy 49 to refer to avoiding, remedying or mitigating adverse environmental effects (rather than the current focus on just minimising adverse effects). The Hearing Panel agrees and recommends granting this part of the relief sought.</p> <p>The amended Policy would read as follows:</p> <p><i>Noise and vibration from activities undertaken in the coastal marine area, including underwater activities, will be managed to <u>avoid, remedy or mitigate</u> adverse environmental effects.</i></p>
Further submissions – Trans Tasman Resources Ltd (6)		Oppose	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
48 – Taranaki District Health Board	624	Support Retain Policy 49 of the Plan as notified	Accept Support noted. Policy 49 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
60 - Te Kaahui o Rauru	625	Amend Submitter seeks amendment to Policy 49 of the Plan to focus on avoiding and remedying adverse environmental effects before mitigating and emphasize the protection of biodiversity from adverse environmental effects.	Accept The submitter notes that section 8.6.3 [General standards – Air] of the Plan does not contain noise and vibration limits to manage effects on biodiversity values and seek amendments to the Plan that focuses on avoiding such effects.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	The Hearing Panel recommends granting the relief sought by the submitter by amending Policy 49 to refer to managing noise and vibration from activities in the coastal marine area in a manner that avoids, remedies or mitigates adverse environmental effects (rather than the current focus on just minimising adverse effects). This would strength alignment between this Policy and other policies, particularly Policy 14 [Indigenous biodiversity] where there may be a requirement to avoid such effects.
New Policy – National Grid			
26 – Transpower NZ Ltd	626	Amend As an alternative to reliefs sought by the submitter in relation to Policies 8, 14, and 19, amend Plan to include new policy specific to the National Grid that reads as follows: <u>(a) Managing activities, to the extent reasonably practicable, to avoid adverse effects, including reverse sensitivity effects, on the National Grid; and</u> <u>(b) Manage the adverse effects of new National Grid infrastructure by all of the following:</u> <u>(i) recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas.</u> <u>(ii) seeking to avoid adverse effects on the values of the following:</u> <u>a. areas of significant indigenous biodiversity</u> <u>b. areas of outstanding value</u> <u>c. places or areas containing historic heritage of regional or national significance</u>	Accept in part The submitter would like to see the Plan amended to include an additional policy specific to the National Grid in order to provide for the requirements of the <i>National Policy Statement for Electricity Transmission 2008</i> (NPSET). In particular, the submitter would like to see Policies 2,3,4,8 and 10 of the NPSET given effect to within the new policy. The Hearing Panel recommends accepting in part the reliefs requested by the submitter. The Hearing Panel recommends that a new policy, Policy 6A [Management of adverse effects of the National Grid], be included in the Plan that specifically addresses the management of adverse effects of the National Grid, particularly where there may be conflicting values and priorities between use and development and the protection of significant coastal values. The new Policy 6A will seek to reconcile national requirements in the NPSET that the Council recognise and provide for the National Grid against other national requirements set out in the <i>New Zealand Coastal</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>d. significant surf breaks</u></p> <p><u>(iii) where it is not reasonably practicable to avoid adverse effects on the value of the areas listed in d)ii) above because of the functional, operational, technical or locational needs of the National Grid, remedy or mitigate adverse effects on those values to the extent reasonably practicable;</u></p> <p><u>(iv) where reasonably practicable, avoiding, remedying or mitigating other adverse effects;</u></p> <p><u>(v) consider offsetting for residual adverse effects on indigenous biological diversity.</u></p>	<p>Policy Statement relating to natural character, indigenous biodiversity and surf breaks.</p> <p>While most of the suggested wording is recommended to be adopted by the Hearing Panel, some amendments are considered appropriate based on the view that many of the NPSET requirements are already separately recognised and/or addressed in other Plan policies such as Policy 5 [Appropriate use and development], Policy 6 [Benefits of regionally important infrastructure], Policy 31 [Structures that support safe public access and use, or public or environmental benefit], Policy 36 [Maintenance minor alteration or minor extension of existing structures] and Policy 37 [Major alteration or extension of existing structures].</p> <p>The new Policy 6A would read as follows:</p> <p><u>Policy 6A: Management of adverse effects of the National Grid</u></p> <p><u>Where the National Grid has a functional need or operational need to locate in the coastal environment, manage the adverse effects arising from their activities by:</u></p> <p><u>(a) recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</u></p> <p><u>(b) seeking to avoid adverse effects on:</u></p> <p><u>(i) areas of outstanding value;</u></p> <p><u>(ii) significant indigenous biodiversity;</u></p> <p><u>(iii) historic heritage as identified in schedules 5A and 5B; and</u></p> <p><u>(iv) nationally or regionally significant surf breaks as identified in Schedule 7A and B;</u></p> <p><u>(c) where it is not practicable to avoid adverse effects on the values of the areas listed in (b) above because of the functional needs or operational needs of the National Grid, remedy or mitigate adverse effects on those values; and</u></p> <p><u>(d) avoiding, remedying or mitigating other adverse effects.</u></p>

4.5 Methods

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Methods 1 to 7 – General			
2 – Federated Farmers	627	Support	Accept Support noted. The methods are retained subject to amendments to offer relief to other submitters' concerns where appropriate.
		Retain Implementation Methods 1 - 7 of the Plan as notified.	
Further submissions – Port Taranaki Ltd (32)		Support	
Method 1 – Advice and information			
41 – Te Korowai o Ngāruahine Trust	628	Amend	Accept The Hearing Panel recommends granting the relief sought by the submitter by including a new Clause (ab) that reads as follows: 1. <i>Provide advice and information, including guidelines to coastal users, consent holders and the public: [...]</i> <i>(ab) to promote awareness of the natural, cultural, historic, and amenity attributes and values of the coastal environment, including the cultural significance and importance of the coastal and marine environments to Māori and iwi/hapū. [...]</i>
		Submitter seeks amendment to Implementation Method 1 of the Plan to include the provision of advice and information about the cultural significance and importance of the coastal and marine environment to Māori and iwi/hapū.	
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
43 – Royal Forest and Bird Protection Society	629	Amend	Accept The Hearing Panel recommends granting the relief sought by the submitter by amending Implementation Method 1(g) to read: <i>(g) on responsibilities and processes under other legislation, for example, Fisheries Act 1996, Biosecurity Act 1993, Reserves Act 1977, Heritage New Zealand Pouhere Taonga Act 2014, <u>the Marine Mammal Protection Act 1978, Wildlife Act 1953 and Exclusive Economic Zone and Continental Shelf (Environmental Effects) Act 2012.</u></i>
		Submitter seeks amendment to Implementation Method 1(g) of the Plan to include reference to the <i>Marine Mammal Protection Act 1978, Wildlife Act 1953 and Exclusive Economic Zone and Continental Shelf (Environmental Effects) Act 2012.</i>	
Trans-Tasman Resources Ltd (6)		Oppose in part	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Methods 2 and 3 – Economic instruments and works and services			
41 – Te Korowai o Ngāruahine Trust	630	Amend The submitter believes that the instruments, works and services referred to in Methods 2 and 3 should be used where they enhance and protect coastal values. The submitter seeks to amend Implementation Methods 2 and 3 of the Plan to delete the word <i>consider</i> .	Decline The Hearing Panel notes that the use of economic instruments, and/or the Council undertaking works and services, may not necessarily be appropriate over the life of the Plan. Such methods need to be considered on a case-by-case basis recognising that the use of economic instruments and/or undertaking works and services will not be appropriate in all circumstances.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
49 – Cam Twigley	631	Amend Submitter seeks amendment to Implementation Methods 2 and 3 of the Plan so that commentary on economic instruments and works and services also references the significant surfing area (and not just surf breaks).	Accept The Hearing Panel agrees to the relief sought by the submitter and recommend amending Implementation Methods 2 and 3 of the Plan so that commentary on economic instruments and works and services refer to the Significant Surfing Area (and not just surf breaks).
Method 4 – State of the environment monitoring			
61 – Te Rūnanga o Ngāti Ruanui Trust	632	Amend Submitter seeks amendment to Implementation Method 4 of the Plan to explicitly include cultural state of the environment monitoring within Taranaki Regional Council's state of the environment monitoring programme.	Grant in kind The Hearing Panel notes that the level of detail sought by the submitter is not considered necessary or appropriate for this part of the Plan. However, the Hearing Panel notes that Section 10.1 does include additional detail relating to monitoring the Plan's efficiency and effectiveness and suggest that Section 10.1 is the more appropriate place to refer to incorporating mātauranga Māori into the Council's state of the environment monitoring. The Hearing Panel recommends an alternative relief by amending Section 10.1 of the Plan to investigate, develop and implement, where appropriate, monitoring methods for the incorporation of mātauranga Māori state of the environment monitoring within the Council's state of the environment monitoring programme.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Method – Spatial planning			
55 – Kiwis Against Seabed Mining	633	Amend Submitter seeks amendment to the Plan to include a new implementation method for the Taranaki Regional Council to use spatial planning to <ul style="list-style-type: none"> establish planning considerations which involves neighbouring rural nature, landscape, cultural history values and development-related interests identify conflicting activities that would impact on mana whenua issues, areas of interest and cultural significance and incorporation of buffer zones include values-based framework that identifies, organises, and describes key Māori values as a basis for guiding and determining natural and physical resource management and can be used to set limits and standards connected to Māori values. 	Accept The submitter seeks the inclusion of marine spatial planning, as an implementation method, to inform decision making. The Hearing Panel recommends granting the relief sought by including a new Implementation Method 5A that reads as follows: <u>5A. Develop and implement spatial planning to achieve integrated management of the coastal environment, including the identification of sites and places with significant values, and, where appropriate, make this publicly available.</u>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
56 – Greenpeace	634	Amend Submitter seeks amendment to the Plan to include a new Implementation Method for the Council to use spatial planning to achieve integrated management of the marine environment that is collaborative and inclusive.	Accept The submitter seeks the inclusion of marine spatial planning, as an implementation method, to inform decision making. The Hearing Panel recommends granting the relief sought by including a new Implementation Method 5A that reads as follows: <u>5A. Develop and implement spatial planning to achieve integrated management of the coastal environment, including the identification of sites and places with significant values, and, where appropriate, make this publicly available.</u>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	635	Amend Submitter seeks amendment to the Plan to include a new Implementation Method for the Council to use spatial planning to <ul style="list-style-type: none"> establish planning considerations which involves neighbouring rural nature, landscape, cultural history values and development-related interests 	Accept The submitter seeks the inclusion of marine spatial planning, as an implementation method, to inform decision making. The Hearing Panel recommends granting the relief sought by including a new Implementation Method 5A that reads as follows:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none">identify conflicting activities that would impact on mana whenua issues, areas of interest and cultural significance and incorporation of buffer zonesinclude values-based framework that identifies, organises, and describes key Māori values as a basis for guiding and determining natural and physical resource management and can be used to set limits and standards connected to Māori values.	<u>5A. Develop and implement spatial planning to achieve integrated management of the coastal environment, including the identification of sites and places with significant values, and, where appropriate, make this publicly available.</u>
Method 6 – Use and development of resources			
35 – Radio New Zealand Ltd	636	Support	Accept
		Retain as notified.	Support noted. Method 6 is retained as notified.
Method 8 – Coastal management framework			
43 – Royal Forest and Bird Protection Society	637	Amend	Grant in kind
		<p>Submitter seeks amendment to Implementation Method 8 of the Plan to read:</p> <p><i>Implement Plan objectives, policies and methods of implementation that recognise different coastal processes, values, and uses, and which allow, regulate or prohibit activities in:</i></p> <p><u>1. the following coastal management areas:</u></p> <p>a) Outstanding Value</p> <p>b) Estuaries Unmodified</p> <p>c) Estuaries Modified</p> <p>d) Open Coast</p> <p>e)Port; <u>and</u></p> <p><u>2. areas identified as having:</u></p> <p><u>a) significant indigenous biodiversity values under Policy 14</u></p> <p><u>b) areas with natural character values under Policy XX</u></p> <p><u>c) areas with natural features and landscapes under Policy XX;</u></p> <p><u>Consistent with policies in section 5.1.</u></p>	<p>The relief sought seeks to expand Implementation Method 8 to reference locations, sites and places (at a finer spatial scale to coastal management areas) with significant coastal values.</p> <p>The Hearing Panel recommends Implementation Method 8, which focuses on coastal management areas, be retained as is but propose an alternative relief whereby a new Method 8A is included that recognises significant sites and places at the finer spatial scale. The new method would read as follows:</p> <p><u>8A. Implement Plan objectives, policies and methods of implementation that allow, regulate or prohibit activities in locations, areas or places with significant values in a manner that avoids, remedies or mitigates adverse effects on:</u></p> <p><u>a) infrastructure of regional importance;</u></p> <p><u>b) natural character and natural features and landscapes;</u></p> <p><u>c) indigenous biodiversity;</u></p> <p><u>d) historic heritage, including sites of significance to Māori; and</u></p> <p><u>e) amenity values, including surf breaks.</u></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Oppose	
Method 12 – Implement Plan to recognise use and development			
35 – Radio New Zealand Ltd	638	Support Retain Implementation Method 12 as notified.	Accept Support noted. Policy 12 is retained as notified.
43 – Royal Forest and Bird Protection Society	639	Amend Submitter supports in part Implementation Method 12 of the Plan but is opposed to the use of the term “ <i>appropriate use and development</i> ”. The submitter seeks amendments to the Implementation Method to reflect reliefs sought by the submitter to Policy 5 of the Plan whereby appropriateness is determined on the basis of avoiding inappropriate locations.	No relief necessary The Hearing Panel does not believe any changes to Implementation Method 12 are necessary. The submitter has not specified what changes they are seeking to the Implementation Method. However, providing for use and development is consistent with the Section 5 sustainable management purpose of the RMA. The Hearing Panel notes that not all use and development in the coastal environment will be appropriate. In determining what is appropriate use and development the reader need to refer to the policies, which includes consideration of location plus other matters.
Further submissions – Transpower NZ Ltd (26), Radio New Zealand (35)		Oppose	
50 – Te Kāhui o Taranaki Trust	640	Amend Submitter seeks amendment to Implementation Method 12 of the Plan to read: <i>Implement Plan objectives, policies and methods of implementation that recognise and provide for appropriate use and development in the coastal environment where Māori cultural values are not adversely impacted on.</i>	Decline The Hearing Panel does not believe any changes to Implementation Method 12 are necessary or appropriate. The methods section of the Plan is broad reaching and identifies non regulatory methods for achieving all the Plan objectives, including those relating to Māori cultural values. What is appropriate and where certain activities will be allowed will be determined having regard to the relevant policies and rules within the Plan (not the methods). It is important to note that these policies address broader values and uses than just Māori values or historic heritage. The Hearing Panel does not consider it necessary or appropriate for Plan provisions to focus on one set of values, or unnecessarily restate all the values.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
Methods 13 to 20 Natural heritage			
2 – Federated Farmers	641	Support Retain Implementation Methods 13 to 20 of the Plan as notified.	Accept

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Support	Support noted. Implementation Methods 13 to 20 are retained subject to minor and inconsequential amendments requested by other submitters.
29 – Department of Conservation	642	Amend The submitter is concerned by the number of blue penguins killed or injured by domestic dogs off leashes along Taranaki beaches and wishes to see bylaws to protect indigenous species encouraged through the Methods section. Submitter seeks amendment to Section 6.4 [Natural heritage] of the Plan to include a new Implementation Method to read: <u>Encourage district councils to enforce dog control bylaws to preserve indigenous biodiversity by reducing the risk of dogs killing or injuring native birds, marine mammals and other indigenous species.</u>	Accept in part The Hearing Panel recognises the threat posed by dogs to penguins and other indigenous species. However, the Hearing Panel suggests there are disadvantages to confining advocacy to single issues. Instead, the Hearing Panel recommends amending Implementation Method 14 to broaden its scope to advocacy for the purposes of protecting significant indigenous biodiversity, which includes territorial authorities, and could be for the purpose of encouraging the enforcement of dog control bylaws and to reduce the risk of dogs killing or injuring native birds, marine mammals and other indigenous species. Of note, advocacy would not be confined to that issue and could include other agencies, including the submitter, on other biodiversity related issues.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
Method 15 – Integrated management			
56 – Greenpeace	643	Amend Submitter seeks amendment to Implementation Method 15 of the Plan to extend its scope to address not only marine protected areas but also integrated management of fisheries resources, marine eco-systems and other natural resources and to ensure that there is an integrated management of any activities that occur across jurisdictional boundaries and/or are managed by multiple regimes.	No relief necessary The submitter wishes to see integrated management extended beyond the scope of Implementation Method 15. The Hearing Panel notes that actions or methods promoting integrated management are not confined to this particular method. It is evident in the development of this Plan, in the setting of objectives and general policies, in the scheduling and identification of outstanding natural character, outstanding natural features and landscapes, biodiversity, and historic heritage. The Hearing Panel further notes that many of the methods of implementation may contribute to integrated management even if not explicitly stated. For example, the Council has significant extension and advocacy programmes involving active and passive protection of biodiversity on land, including coastal herbfields, wetlands and dunes. Similarly, the Council works with a wide variety of agencies and land occupiers under a range of statutes in order to achieve the requirements of the Coastal Plan and to improve our databases.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel does not believe that it is necessary to amend Implementation Method 15 to achieve the submitter's request as these matters are fully addressed in the relevant sections of the Plan as discussed. The Hearing Panel also notes that the achievement of integrated management is also dependent upon other agencies and Council may be limited in what it can influence yet alone achieve under other jurisdictions.
Method 16 – Natural heritage			
9 – Karen Pratt	644	Amend The submitter considers the term “coastal site” to be ambiguous and prefers to use the term “coastal marine areas” as this indicates an offshore component. Submitter seeks amendment to Implementation Method 16 of the Plan to read: <i>Maintain and update GIS databases of all known coastal sites coastal marine areas with regionally significant values that identify their values, including the presence of any threatened or regionally distinctive species and sites of high cultural, spiritual and historical significance.</i>	Decline Other submitters are encouraging the adoption of better spatial planning and Implementation Method 16 contributes to that deliverable. For the purposes of effective integrated management, the Hearing Panel suggests that it is appropriate for the Implementation Methods to apply to the wider coastal environment, not just the coastal marine area. Referring to the coastal marine area would limit the scope of the method to only areas within the coastal marine area, removing a considerable amount of onshore area that the Coastal Plan includes. The Hearing Panel does not believe that this is the intention of the submitter and reassures the submitter that “coastal sites” does include offshore reefs and sites within the coastal marine area in addition to the landward part of the coastal environment. The Council gathers considerable information across the broad suite of its activities (not just those that relate to this Plan or the RMA) and regularly maintains and updates relevant information on its GIS databases. These include its biodiversity and biosecurity programmes under the <i>Local Government Act</i> and the <i>Biosecurity Act</i> but may also include useful information from the Council's other regional plans and/or from other environmental agencies.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Method 19 – Natural heritage			
60 - Te Kaahui o Rauru	645	Amend Submitter seeks amendment to Implementation Method 19 to include mana whenua alongside landowners.	Accept The Hearing Panel recommends including mana whenua alongside landowners. The amended Implementation Method 19 would read as follows: <i>19. Promote active restoration of sand dunes and coastal herb fields, wetlands and forests through working with landowners and <u>tangata whenua</u> and providing advice and funding for planting, weed and pest control and other related matters.</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Methods 21 to 31 – Historic heritage			
28 – Grant Knuckey	646	Amend Submitter seeks amendment to Implementation Methods 21 - 31 of the Plan to require reports mandated by mana whenua and including cultural dimensions applying matauranga Māori.	Accept in part The Council is currently investigating the incorporation of matauranga Māori principles into its monitoring strategies. Although these changes are taking place, the Hearing Panel does not consider it necessary or appropriate to amend the Plan to require reporting prior to the outcomes of that process. The Hearing Panel notes that such reporting requirements and protocols are an operational matter best addressed outside the Plan.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
28 – Grant Knuckey	647	Amend Submitter seeks amendment to Implementation Methods 21 - 31 of the Plan to require for all applications for resource consent policy; or plan changes; or variations are to be reported on by cultural adviser(s) mandated by tangata whenua of Taranaki with costs to be borne by proponents.	Decline The Hearing Panel recommends declining the relief sought noting that such matters are operational detail that is not appropriate to be included in the Plan. Notwithstanding the above, the Hearing Panel notes Implementation Method 30 which states that the Council will work with iwi authorities to develop memoranda of understanding that establish and maintain an effective working relationship. In particular, Mana Whakahono a Rohe agreements between the Council and iwi represent an opportunity to set out agreements on Council/iwi relationships, including any requirements for resource consent applications, policy; or plan changes; or variations to be reported on by cultural advisers.

Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
28 – Grant Knuckey	648	Amend Submitter seeks amendment to Implementation Methods 21 – 31 of the Plan to require memoranda of understanding with mana whenua.	No relief necessary The Hearing Panel notes Implementation Method 30 already provides for the relief sought by the submitter. Method 30 states that the Council will work with iwi authorities to develop memoranda of understanding that establish and maintain an effective working relationship.
28 – Grant Knuckey	649	Amend Submitter seeks amendment to Implementation Methods 21 - 31 of the Plan to require marine spatial planning - incorporating matauranga Māori in collaboration with mana whenua.	Accept in part The submitter seeks the inclusion of marine spatial planning, as an implementation method, to require marine spatial planning that incorporates matauranga Māori in collaboration with manawhenua inform decision making.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	The submitter has not provided specific details as to what this relief looks like or how matauranga Māori is incorporated into a spatial framework. The Hearing Panel notes that the Council already gathers considerable information, including spatial information, across the broad suite of its activities (not just those that relate

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>to this Plan or the RMA) and regularly maintains and updates relevant information on its GIS databases. The Council is further investigating the incorporation of matauranga Māori principles into its monitoring strategies with opportunities of incorporating some or all of that information into spatial planning.</p> <p>The Hearing Panel recommends granting the relief sought in part by including a new Implementation Method 5A that reads as follows:</p> <p><i><u>5A. Develop and implement spatial planning to achieve integrated management of the coastal environment, including the identification of sites and places with significant values, and, where appropriate, make this publicly available.</u></i></p>
39 – Maniapoto Māori Trust Board	650	<p>Other</p> <p>Submitter encourages Council to uphold the principles of the Treaty of Wāitangi and to actively look at Māori representation on its standing committees.</p>	<p>No relief necessary</p> <p>The submitter's comments are noted.</p> <p>The Hearing Panel directs the submitter to Implementation Method 31 which provides for tangata whenua to be represented on the Council's Policy and Planning Committee, the Consents and Regulatory Committee and other committees arising out of Treaty of Waitangi settlements. In addition, Objective 10 [Treaty of Waitangi] and Policy 16 [Relationship of tangata whenua] also ensure that the Treaty of Waitangi is part of the Plan's policy framework.</p>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	651	<p>Support</p> <p>Submitter support Implementation Methods 21 to 31 of the Plan as a useful basis to support implementation of the Plan in line with tangata whenua values.</p>	<p>Accept</p> <p>Support noted. Implementation Methods 21 – 31 are retained subject to minor and inconsequential amendments requested by other submitters to Implementation Methods 24, 25 and 27.</p>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
57 – Heritage New Zealand	652	<p>Amend</p> <p>Submitter seeks amendment to Section 6.5 of the Plan by adding a new Method within the section to read:</p> <p><i><u>Regularly review and update Schedule 7 [Historic Heritage] to reflect the latest information; for example, new entries on the New Zealand heritage list/Rārangī Kōrero and new sites of significance identified by iwi and/or hapū.</u></i></p>	<p>No relief necessary</p> <p>The Hearing Panel does not believe the relief sought by the submitter is appropriate or necessary.</p> <p>Methods of implementation are optional content matters under Section 67 of the RMA. The Plan methods are deliberately high level to broadly capture the suite of coastal uses and values addressed by the Plan. The Hearing Panel does not believe it is necessary for Implementation Methods to provide the specificity sought by the submitter.</p> <p>The Hearing Panel suggests that Implementation Method 16 already sets out that the Council will maintain and update GIS databases of all known coastal sites with</p>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41) Te Atiawa		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
(58), Te Rūnanga o Ngāti Ruanui Trust (61)			regionally significant values, including historic significance. Section 10.2 [Review of the Plan] further states that a review of the relevant parts or provisions of the Plan may be carried out if a new issue arises, or if regional monitoring or research programmes show that a review would otherwise be appropriate.
57 – Heritage New Zealand	653	Amend Submitter seeks amendment to Section 6.5 of the Plan by adding a new Method within the section to read: <u>Consider opportunities for collaboration with stakeholders on the protection and conservation of historic heritage.</u>	No relief necessary The Hearing Panel directs the submitter to Implementation Method 22, which already addresses supporting and, where appropriate, being involved in surveys, research and investigations involving historic heritage.
Method 24 – Identification of wāhi tapu and other taonga			
42 – Ngati Rahiri Hapū	654	Amend Submitter seeks amendment to Implementation Method 24 of the Plan to include the definition “waahi taonga” noting the submitter will provide the Taranaki Regional Council with GIS data of sites that they are willing to share.	Accept The submitter notes that it has GIS data on sites of significance in its rohe. Through the pre-hearing process the submitter has worked with the Council to identify sites of significance in their rohe, which have subsequently been included in the Plan and associated planning maps (where this is appropriate). The Hearing Panel further agrees to amend Implementation Method 24 (and other consequential amendments) to include “waahi taonga” within the Method. The amended method would read as follows: 24. Support and assist iwi as appropriate, <u>to identify sites and places of special cultural and traditional value associated with the coastal environment, including the identification of wāhi tapu, wāhi taonga and other taonga through the development of electronic wāhi tapu inventories, registers or ‘silent files’.</u>
Method 25 – Iwi involvement or partnership			
41 – Te Korowai o Ngāruahine Trust	655	Amend Submitter suggests Implementation Method 25 of the Plan refers to two distinct forms of implementation and involvement and seeks that it be amended to separate those activities relating to databases and information (which is already addressed in Method 24).	Accept The Hearing Panel agrees to the relief sought by the submitter. The Hearing Panel recommends amending Implementation Methods 24 and 25 to read: 24. Support and assist iwi <u>to develop iwi and Council databases and records that identify sites and places of special cultural and traditional value associated with the coastal environment, including the identification of wāhi tapu, wāhi taonga and</u>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>other taonga through the development of electronic wāhi tapu inventories, registers or 'silent files'.</p> <p>25. Consider iwi involvement or partnerships in Taranaki Regional Council resource investigations and projects associated with the coastal environment.</p>
42 – Ngati Rahiri Hapū	656	<p>Amend</p> <p>Submitter seeks amendment to Implementation Method 25 of the Plan by deleting and replacing the word “consider” (in relation to Iwi involvement or partnerships in Council resource investigations and projects) with a stronger word to show a stronger commitment from the Council.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter noting that involvement or partnerships with other parties (not just iwi) on Council investigations and projects necessarily need to be considered on a case-by-case basis.</p>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41) Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
Method 27 – Promote public awareness of wāhi tapu and other taonga			
42 – Ngati Rahiri Hapū	657	<p>Amend</p> <p>Submitter seeks amendment to Implementation Method 27 of the Plan to also refer to “waahi taonga”.</p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought by the submitter. It is recommended the Implementation Method 27 be amended to read:</p> <p>27. Provide advice and information to generally promote awareness of wāhi tapu, <u>wāhi taonga</u> and other taonga and the importance and values of such sites and values.</p>
Method 29 – Historic heritage			
57 – Heritage New Zealand	658	<p>Amend</p> <p>Submitter seeks amendment to Implementation Method 29 of the Plan due to the potential issues with silent files and the accessibility of the public. The submitter suggests to consider using indicative markers on planning maps and consultation with iwi and/or hapū instead.</p>	<p>No relief necessary</p> <p>The Hearing Panel notes the concerns of the submitter are around a sensitive area of information to iwi/hapū. However, this level of detail is not considered appropriate to specify in Plan methods. Such matters are currently being worked through in this Plan review process.</p>
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	Operational details to address potential issues with silent files and the use of indicative markers might be a matter to be addressed in Mana Whakahono a Rohe agreements. Although it is noted that in the engagement with iwi and hapū to date

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			there is general agreement that polygons are the more appropriate planning tool which has been implemented as a result of such consultations with iwi/hapū. The methodology and appropriateness of using indicative markers to identify culturally sensitive sites of significance will be determined only in consultation with the affected tangata whenua.
Method 31 – Historic heritage			
57 – Heritage New Zealand	659	Amend	Decline
		Submitter seeks amendment to Implementation Method 31of the Plan to include how the Council will provide guidance on how tangata whenua representatives will be chosen.	The Hearing Panel does not recommend granting the relief sought by the submitter. The Hearing Panel considers this level of detail inappropriate for Plan methods noting that such matters have already been addressed with the agreements of the iwi authorities.
Method 32 – Resource consents			
50 – Te Kāhui o Taranaki Trust	660	Amend	No relief necessary
		Submitter seeks amendment to Implementation Method 32 of the Plan to read: <i>As appropriate, require new or renewed resource consents for the use or development of the coastal marine area to include a condition addressing public access <u>where Māori cultural values are not adversely impacted on.</u></i>	The Hearing Panel recognises the submitter’s concerns regarding Māori cultural values and public access. The Hearing Panel would like to reassure the submitter that such issues are already addressed in the Policies section. The Hearing Panel further notes that the qualifier for including consent conditions addressing public access is it must be “appropriate”. Policy 17 (c) sets out directions where public access might not be appropriate and it includes, amongst other things, where restrictions necessary to protect historic heritage and sites and activities of cultural value to Māori.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	As the requested relief is already contained within the relevant policies and will be implemented on such instances where public access and cultural values coincide, the Hearing Panel does not consider it appropriate or necessary to repeat the provisions already provided for.
Method 34 – Public use and enjoyment			
2 – Federated Farmers	661	Support	Accept
		Retain Implementation Method 34 of the Plan as notified.	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Support	Support noted. Implementation Method 34 is retained subject to minor and inconsequential amendments requested by another submitter.
5 – Point Board Riders	662	Support Submitter supports Implementation Method 34 of the Plan establishing a working group of stakeholders for the designated Significant Surfing Area and suggest the concept could be expanded to other parts of the coastline if the model is successful.	Accept Support and comments noted.
15 – Surfbreak Protection Society	663	Support Submitter supports Implementation Method 34 of the Plan establishing a working group of stakeholders for the designated Significant Surfing Area and seeks key surfing groups be involved.	Accept Support and comments noted.
50 – Te Kāhui o Taranaki Trust	664	Amend The submitter comments that Implementation Method 34 is premature and contend that the Council has not gone through appropriate consultation on the surf breaks designations. Submitter seeks amendment to the Plan by deleting Implementation Method 34 of the Plan relating to the establishment of a working group to look at protecting and enhancing recreational values.	Grant in kind The Hearing Panel notes that through the Coastal Plan review there has already been considerable consultation and engagement on the issue of surf break protection. An initial list of regionally significant surf breaks was adopted in the current <i>Regional Policy Statement for Taranaki</i> , which was adopted in 2010. However, through the Coastal Plan review additional investigations and engagement occurred. This included the commissioning of reports on Regional significance criteria for the assessment of surfbreaks and Taranaki surf breaks of national significance, consultation and seeking of feedback on draft Plan policies, further consultation on a draft Plan and, more recently, public notification for the Proposed Plan. As part of the review, an innovative 'wave survey' was also carried out that allowed the community to tell Council which surf breaks had specific values and why. In relation to Implementation Method 34, the Hearing Panel notes there is wide spread support for the establishment of a working group to look at not only protecting and enhancing recreational values in the Significant Surfing Area but also to address wider issues associated with public access, tourism promotion, the management of over-crowding, freedom camping, district council bylaws and the protection of other values in the area. This is an example of reliefs sought by other submitters, on other issues, where greater collaboration and integrated

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>management is sought to address issues that are much broader than those covered by this Plan.</p> <p>Iwi and hapū are seen as integral to this concept working. If the submitter sees no merit in establishing and participating in a working group that includes relevant agencies, landowners, iwi, hapū and interest groups to protect and enhance the recreational values of the Significant Surfing Area as described in Schedule 7B, then the Council will not proceed. Accordingly, the Hearing Panel recommends amending Implementation Method 34 to <u>investigate</u> the establishment of a working group.</p>
Method 35 – Public Access			
42 – Ngati Rahiri Hapū	665	<p>Amend</p> <p>Submitter suggests that the reference to the <i>Queen Elizabeth the Second National Trust Act 1977</i> is in conflict with the intent of Implementation Method 35 to promote public access along the coast as the Queen Elizabeth II covenants generally exclude public access. Submitter seeks amendment to Implementation Method 35 of the Plan to delete reference to “<i>Queen Elizabeth the Second National Trust Act 1977</i>”.</p>	<p>Accept</p> <p>The Hearing Panel agrees to the submitters request to remove the reference to “<i>Queen Elizabeth the Second National Trust Act 1977</i>”. The revised method would read as follows:</p> <p>35. <i>Promote</i> the enhancement of public access to and along the coast through agreements or covenants with landowners under the Walking Access Act 2008, the Reserves Act 1977, or through the voluntary creation of esplanade strips under the RMA.</p>
Method 43 – Implement Plan			
50 – Te Kāhui o Taranaki Trust	666	<p>Amend</p> <p>Submitter seeks amendment to Implementation Method 43 of the Plan to read: <i>Promote industrial, domestic, and agricultural discharge and treatment systems, siting, design, installation, operation and maintenance procedures to avoid or mitigate adverse effects on coastal water or air quality <u>where Māori cultural values are not adversely impacted on.</u></i></p>	<p>No relief necessary</p> <p>The Hearing Panel recognises that the submitter wishes to protect their cultural values from adverse effects associated with discharge systems. However, the Hearing Panel notes that the rationale for avoiding or mitigating adverse effects on coastal water or air quality includes wider resource management considerations and is not confined to Māori cultural values. It is not appropriate to limit or restrict Implementation Method 43 in such a manner. The Hearing Panel refers the submitter to the relevant policies, including General Policies, to see the level of protections provided for under such matters.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Method 47 – Notify Medical Officer of Health			
48 – Taranaki District Health Board	667	Amend	Accept
		Submitter seeks amendment to Implementation Method 47 of the Plan to read: <i>Notify the Medical Officer of Health for Taranaki and the relevant territorial authority if water quality shows that coastal water is unfit for contact recreation or gathering of shellfish for human consumption. <u>The Taranaki Regional Council will also conduct an investigation to determine the cause of the poor water quality if it is practicable.</u></i>	The submitter wishes to include a method component that emphasises the investigation into the cause of the poor water quality if it is practicable to do so. The Hearing Panel agrees and recommends amending Implementation Method 47 as sought.
Method 48 – Advocate or encourage			
9 – Karen Pratt	668	Amend	No relief necessary
		The submitter is concerned about the potential adverse environmental effects of ballast water and seeks amendment to Implementation Method 48 of the Plan to reference Maritime New Zealand Marine Protection Rules and Craft Risk Management Standard and suggest looking at the wording in conditions of consent included in the recent granting to mine ironsand off New Zealand.	The Hearing Panel suggests that the relief sought by the submitter is a matter to be considered when applying the rules although care needs to be taken to ensure the matters being considered relate to the Council's jurisdictional responsibilities under the RMA and do not derogate from the Ministry for Primary Industries border control responsibilities, which includes ballast water. The Hearing Panel notes that Implementation Method 48 is a non-regulatory method to achieve Plan objectives (in this case advocacy and encouragement).
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
29 – Department of Conservation	669	Support	Accept
		Retain Method 48 of the Plan as notified.	Support noted. Implementation Method 48 is retained as notified.
Method 50 – Regional marine oil responses			
7 – Waikato Regional Council	670	Support	Accept
		Submitter supports Implementation Method 50 of the Plan relating to marine oil spill responses.	Support noted. Implementation Method 50 is retained as notified.
Further submissions – Port Taranaki Ltd (32)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Method 51 – Noise standards			
43 – Royal Forest and Bird Protection Society	671	Amend Submitter seeks amendment to Implementation Method 51 of the Plan to delete reference to New Zealand Standards and replace with: <i>[...] <u>considerations of the latest information of the effects of noise of marine species and habitats. The use of the most recent professionally supported noise modelling for the marine environment. Taking a precautionary approach where limited information is available.</u></i>	Decline The Hearing Panel recommends declining the relief sought by the submitter noting that the <i>New Zealand Standards NZS 6802:2008 Acoustics - Environmental noise</i> and <i>NZS 6803: 1999 Acoustics – Construction Noise</i> have been adopted and underpin the limits set in Section 8.6.3 [General standards – Noise] of the Plan.
Further submissions – Trans-Tasman Resources Ltd (6), Port Taranaki Ltd (32)		Oppose	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
48 – Taranaki District Health Board	672	Amend Submitter seeks amendment to Implementation Method 51 of the Plan to read: <i>Consideration of the general standards in this Plan, and of New Zealand Standards NZS 6802:2008 Acoustics - Environmental noise and NZS 6803: 1999 Acoustics – Construction Noise when:</i> <i>(a) considering applications for coastal permits; or</i> <i>(b) determining whether noise <u>is unreasonable levels are excessive</u> for the purpose of enforcement action under Part 12 of the RMA.</i> <i><u>Note “excessive noise” is subject to special provisions of the RMA under sections 326-328 of the Act. Council enforcement Hearing Panel may exercise powers to investigate complaints that noise is excessive and take appropriate actions under s.327 of the Act.</u></i>	Accept in part The Hearing Panel recommends amending Implementation Method 51 in part to read: <i>Consideration of the general standards in this Plan, and of New Zealand Standards NZS 6802:2008 Acoustics - Environmental noise and NZS 6803: 1999 Acoustics – Construction Noise when:</i> <i>(a) considering applications for coastal permits; or</i> <i>(b) determining whether noise levels are <u>in breach</u> for the purpose of enforcement action under Part 16 of the RMA.</i> Hearing Panel suggest the explanatory note would be more appropriately placed in Section 8.6.3 of the Plan.
NEW Method Natural hazard management			
7 – Waikato Regional Council	673	Amend Submitter seeks that Council consider incorporating an adaptive pathways planning approach to natural hazards as a new Implementation Method.	Decline No precise details of amendments sought to the Plan have been provided and seems to be an unnecessary level of detail given that the Coastal Plan would be

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			only one of the elements necessary to deliver adaptive pathways planning approach to natural hazards with other agencies (such as territorial authorities) having the key role.

4.6 Rules

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
General – Plan			
43 – Royal Forest and Bird Protection Society	674	Amend Submitter seeks amendment to rules to change “ <i>effects on ecological values</i> ” to “ <i>effects on indigenous biodiversity</i> ” in matters for control.	Accept The term “ <i>ecological values</i> ” means relating to or concerned with the relation to organisms to one another and their physical surroundings. As such it has a broad application and potentially captures other matters of control identified in relevant rules such as water quality but is potentially unclear as to what other constituent parts of the environment are also captured in the term. For the purposes of certainty and clarity, the Hearing Panel recommends changing reference to “ <i>effects on ecological values</i> ” to “ <i>effects on indigenous biodiversity</i> ” plus other consequential changes (addressing natural character) within the rules section to better align with Plan policies addressing natural form and functioning and indigenous biodiversity. This relief will better align language between the rules and language already adopted in the objectives and policies of the Plan.
Further submissions – Port Taranaki Ltd (32)		Oppose	
43 – Royal Forest and Bird Protection Society	675	Amend Submitter seeks amendment to permitted activity rules of the Plan by replacing references to avoiding adverse effects on Policy 11 of the <i>New Zealand Coastal Policy Statement</i> matters with permitted activities that limit the activity type, scale and location to the extent that the activity will not have an adverse effect which is inconsistent with achieving Policy 11 of the <i>New Zealand Coastal Policy Statement</i> .	Decline At the hearing, the submitter highlighted concerns over subjective rule standards, term and conditions. It was their view that standards, terms and conditions for permitted (or controlled) activities should only be provided where it is known that the potential effects will be not more than minor and in these instances the conditions should be clear. The Hearing Panel agrees but notes that, as far as is practicable, this has been done. It is the Hearing Panel's view that all rules give effect to Policy 11 [Indigenous biological diversity (biodiversity)] of the <i>New Zealand Coastal Policy Statement</i> . Permitted activity rules are already proposed that are believed to be of a scale, type and location that any adverse effects on biodiversity will be less than minor and is consistent with community expectations set out in the Plan policies – particularly Policies 14, 14A and 14B the Plan, which, in turn give effect to Policy 11 of the <i>New Zealand Coastal Policy Statement</i> . Notwithstanding any permitted activity classification, undertaking such activities is still subject to compliance with the standards, terms and
Further submissions – Powerco (45)		Oppose in part	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>conditions of the rule, which will ensure that such activities are carried out in a manner that will avoid, remedy or mitigate effects on significant indigenous biological diversity. There may be isolated circumstances where a permitted activity could occur at a time or place that might have potential adverse effects on significant indigenous biodiversity. In such cases, the activity is not 'allowed' as there is a standard, term and condition that requires adverse effects to be avoided.</p> <p>This is part of a precautionary approach that may require a higher level of protection than otherwise provided for under Policy 14). Also as part of the precautionary approach, Rules 18, 20, 21 and 22 include notification clauses whereby the activity must notify the Council prior to commencing the activity so that there is an opportunity if necessary to confirm that the type, scale and location of the permitted activity should indeed be able to comply with the relevant standards, terms and conditions.</p> <p>Further to this, the Hearing Panel notes that, in response to other reliefs sought by the submitter and others, the Panel has recommended additional standards, terms and conditions to be included in permitted and controlled activity rules that address other wider biodiversity considerations, for example, protection of taonga species and aquatic life</p>
43 – Royal Forest and Bird Protection Society	676	Amend	No relief necessary
		Submitter seeks amendment to rules of the Plan to avoid adverse effect on natural character as required by Policies 13 and 15 of the <i>New Zealand Coastal Policy Statement</i> .	No precise details of amendments sought to the Plan have been provided. However, it is the Hearing Panel's view that all rules give effect to Policies 13 [Preservation of natural character] and 15 [Natural features and natural landscapes] of the <i>New Zealand Coastal Policy Statement</i> .
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	Permitted activity rules are believed to be of a scale, type and location that any adverse effects on natural character and natural features and landscapes will be less than minor and is consistent with community expectations set out in the Plan policies – particularly Policies 8 to 13 of the Plan, which, in turn give effect to Policies 13 and 15 of the <i>New Zealand Coastal Policy</i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Powerco (45)		Oppose in part	<p><i>Statement.</i> Any permitted activity is subject to compliance with the standards, terms and conditions of the rule, which will ensure permitted activities are carried out in a manner that will avoid, remedy or mitigate effects on natural character and natural features and landscapes.</p> <p>Where activities are of a scale, type and location that any adverse effects on natural character and natural features and landscapes will likely to be more than minor a resource consent is required. Through the consenting process, all General Policies are considered, including Policies 8 to 13, when determining whether the activity will be allowed and, in the event that it is consented, what conditions will be imposed to avoid, remedy or mitigate effects on natural character and natural features and landscapes. The Hearing Panel further notes that controlled and restricted discretionary rules generally include, as a matter of control/discretion, effects on natural character, features and landscape values.</p>
55 – Kiwis Against Seabed Mining	677	<p>Amend</p> <p>Submitter seeks amendment to the Plan to include rules prohibiting and restricting fishing activities and protect coastal values as identified through spatial planning.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter noting that jurisdictional responsibilities for marine fishing lies with the Ministry for Primary Industries under the <i>Fisheries Act</i>. Regional councils are therefore not responsible for fishing activities <i>per se</i> within the coastal marine area.</p> <p>Notwithstanding the above, the Hearing Panel recognises that activities in the coastal marine area may result in the disturbance or destruction of marine habitat. However, such activities are already addressed via Plan rules. Any other prohibitions or restrictions targeting fishing activities are considered inappropriate.</p>
56 – Greenpeace	678	<p>Amend</p> <p>Submitter seeks amendment to the Plan (rules) to ensure that fishing activities are managed so as to avoid, remedy or mitigate adverse effects to environmental bottom lines and policies of the <i>New Zealand Coastal Policy Statement</i> and/or values identified in the Regional Policy Statement and Coastal Plan.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. noting that jurisdictional responsibilities for marine fishing lies with the Ministry for Primary Industries under the <i>Fisheries Act</i>. Regional councils are therefore not responsible for fishing activities <i>per se</i> within the coastal marine area.</p> <p>Notwithstanding the above, the Hearing Panel recognises that activities in the coastal marine area may result in the disturbance or destruction of marine habitat. However, such activities are already addressed via Plan rules. Any other prohibitions or restrictions targeting fishing activities are considered inappropriate.</p>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Ahiawa (58)		Support	<p>Notwithstanding the above, the Hearing Panel recognises that activities in the coastal marine area may result in the disturbance or destruction of marine habitat. However, such activities are already addressed via Plan rules. Any other prohibitions or restrictions targeting fishing activities are considered inappropriate.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	679	Amend Submitter seeks amendment to the Rules of the Plan to clearly articulate tangata whenua participation.	No relief necessary No precise details of amendments to the Plan have been provided and the Hearing Panel is unclear as to what amendments to rules would be appropriate to clearly articulate tangata whenua participation (presumably in relation to RMA matters). The Hearing Panel does not believe operational details relating to the implementation of the Plan are appropriate to be included within a Plan yet alone in the rules section. The Hearing Panel does not recommend making any changes to the rules section of the Plan in response to the relief sought. However, the Hearing Panel notes consequential amendments have been made to relevant Plan objectives, policies and methods articulating tangata whenua values and relationships. Further opportunities to address operational detail exists outside the Plan. In particular, the Hearing Panel notes that, through Mana Whakahono a Rohe agreements, such matters can be addressed and further detail provided. The Council will be seeking to work with tangata whenua in order to address these issues in the appropriate setting and format through Mana Whakahono a Rohe agreements.
Further submissions - Te Korowai o Ngāruahine Trust (41)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	680	Other Submitter seeks that more details are provided with respect to the nature and scope of the word “ <i>minor</i> ” to avoid confusion.	No relief necessary The word “ <i>minor</i> ” has been used in several contexts. The most common instance is in relation to describing the effects of an activity. In general, the magnitude of the effects of an activity are determined on a case-by-case basis as it is not appropriate to make a blanket statement that covers so many variables, environmental locations and sensitive environments. For example, what is considered a minor effect in one location may produce a significant effect in another due to the nature of that specific location and the associated values and uses. The criteria for determining “ <i>minor adverse effects</i> ” is whether the activity will cause an adverse effect and the level of that effect and the time it would take for that effect to be remedied (either naturally or through remedial processes). Generally, minor effects are small and transitory such that they do not require avoiding, remedying or mitigating in order to maintain the values of that location, whether those be biological, environmental, historic, cultural, visual, etc.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	681	Amend Submitter seeks amendment to the Rules section of the Plan that monitoring programmes referred to within the Rules section of the Plan include cultural or mauri indicators/values.	No relief necessary The Hearing Panel does not believe the rules section is the appropriate place to introduce or detail cultural monitoring requirements. The submitter has not stated which rules need to be amended or the precise amendments sought. However, the Hearing Panel notes that for discretionary and non-complying activities, cultural monitoring programmes that include cultural or māori indicators/values may be considered on a case-by-case basis as part of the consenting process. Similarly, controlled activity rules already include, as matters of control, monitoring considerations. Monitoring is a broad term that is used in the Plan to include all aspects of monitoring including cultural monitoring and there is no advantage in confining monitoring to particular forms. Again, through the consenting process, there is the opportunity to consider and include cultural or mauri indicators/values on a case-by-case basis as part of any compliance programme.
Further submissions - Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	682	Amend Submitter seeks amendment to the Rules section of the Plan to reference adverse effects on Schedules 1, 2, 4C, 5B and Appendix 2 of the Plan.	No relief necessary The Hearing Panel notes that the appropriate references to Plan schedules have already been included within the rules section and no further additions are required. The Hearing Panel further notes that the submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities. The inclusion of such matters in the rule is not considered appropriate with conditions being developed on a case-by-case basis through the consenting process having regard to the relevant policies, which in turn contain the necessary reference to the schedules sought by the submitter.
Rule 1 – Stormwater discharge			
29 – Department of Conservation	683	Amend Submitter seeks amendment to Rule 1 of the Plan to exclude its application to coastal management areas, Outstanding Value and Estuaries Unmodified.	Decline The submitter believes that the permitted classification of stormwater discharge into Outstanding Value coastal management areas and Estuaries Unmodified is inappropriate.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Stormwater is defined within the Plan (in accordance with the <i>National Planning Standards</i>) and means "...runoff that has been channelled, diverted, intensified or accelerated by human modification of a land surface or runoff from the surface of any structure, as a result of precipitation and includes any contaminants contained within."</p> <p>The Hearing Panel does not recommend granting the relief sought by the submitter.</p> <p>The Hearing Panel does not consider it appropriate to require consents from all premises to simply authorise the discharge of rainfall runoff from their land. Coastal monitoring over the life of the current Coastal Plan has identified no issues with stormwater contributing to more than minor adverse effects to coastal water quality. Therefore, to now require all properties (urban, rural, industrial and trade premises) because they are adjacent to Outstanding Value and Estuaries Unmodified coastal management areas to get a resource consent, regardless of having less than minor adverse effects, imposes significant added compliance cost without any net environmental gain.</p> <p>The Hearing Panel notes that any permitted activity to discharge stormwater into the coastal marine area is still subject to compliance with the standards, terms and conditions of the rule, which will ensure permitted activities are carried out in a manner that will avoid, remedy or mitigate effects on coastal water quality and associated values and uses.</p>
40 – Te Rūnanga o Ngāti Mutunga	684	<p>Amend</p> <p>Submitter seeks amendment to Rule 1 of the Plan by deleting Activity Description (b)(i) in Rule 1 of the Plan to read:</p> <p><i>Stormwater discharge into water or onto land in the coastal marine area that either:</i></p> <p><i>(a) does not convey stormwater from any industrial or trade premises, or</i></p> <p><i>(b) conveys stormwater from industrial or trade premises that:</i></p> <p><i>(i) cover a total area of 2 ha or less; and</i></p> <p><i>(ii) do not use or store hazardous substances.</i></p>	<p>Decline</p> <p>The submitter believes that any stormwater discharge from an industrial or trade premises should be monitored for its possible adverse effects on the environment irrespective of the size of the trade or industrial premises.</p> <p>Stormwater is defined within the Plan (in accordance with the <i>National Planning Standards</i>) and means "...runoff that has been channelled, diverted, intensified or accelerated by human modification of a land surface or runoff from the surface of any structure, as a result of precipitation and includes any contaminants contained within."</p> <p>The relief sought by the submitter will significantly increase compliance costs on a range of businesses by including a requirement to obtain a consent to discharge stormwater. The RMA definition of 'industrial or trade premises' includes a large variety of premises such as surf lifesaving clubs, dairies etc. Stormwater discharges to the coastal marine area from these premises</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>(recognising that they cannot use or store hazardous substances) are expected to have less than minor adverse environmental effects.</p> <p>In terms of managing adverse effects and not imposing unnecessary (and disproportionate costs) on resource users, it is considered inappropriate to require consents from all industrial or trade premises to simply authorise the discharge of rainfall runoff from their land. The Hearing Panel recommends retaining the activity description (b)(i) of Rule 1 as notified.</p>
40 – Te Rūnanga o Ngāti Mutunga	685	<p>Amend</p> <p>The submitter is not convinced that, even with the conditions listed, there is not a possibility of contamination of the water in these areas where stormwater discharges are allowed as a permitted activity.</p> <p>Submitter seeks amendment to amend Rule 1 of the Plan to make stormwater discharges a discretionary activity in Outstanding Value, Estuaries Unmodified and Estuaries Modified coastal management areas.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>Stormwater is defined within the Plan (in accordance with the <i>National Planning Standards</i>) and means “...runoff that has been channelled, diverted, intensified or accelerated by human modification of a land surface or runoff from the surface of any structure, as a result of precipitation and includes any contaminants contained within.”</p> <p>The Hearing Panel notes there are significant urban areas that would be affected by the relief sought by the submitter such as New Plymouth, Waitara, Urenui and Patea. Coastal monitoring over the life of the current Coastal Plan has identified no issues with stormwater contributing to more than minor adverse effects to coastal water quality. Therefore, to now require all properties (urban, rural, industrial and trade premises) to get a resource consent regardless of having less than minor adverse effects is not considered appropriate and would unnecessarily restrict activities without any net environmental impacts.</p>
40 – Te Rūnanga o Ngāti Mutunga	686	<p>Amend</p> <p>Submitter seeks amendment to Condition (i) of Rule 1 of the Plan to read:</p> <p>(i) the discharge does not render marine organisms unsuitable for human consumption within recognised mātaihai reefs/resources; [...]</p>	<p>Accept</p> <p>The submitter identifies that there are difficulties in mapping all of the mātaihai areas within the Ngāti Mutunga rohe and requests that the condition be expanded to include all marine organisms.</p> <p>The Hearing Panel recommends granting the relief sought by the submitter by amending condition (i) to read:</p> <p><i>(i) the activity does not render marine organisms unsuitable for human consumption.</i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	687	<p>Amend</p> <p>Submitter seeks amendment to Condition (k) of Rule1 of the Plan to read: <i>(k) the discharge does not cause the natural temperature to be changed by more than three degrees from normal seasonal water temperature fluctuations, after reasonable mixing <u>or any changes that cause it to exceed 25 degrees Celsius.</u></i></p>	<p>Decline</p> <p>The submitter supports setting an upper temperature limit to the increase any discharge can have on water temperature due to the detrimental effect it can have on life.</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. A review of coastal water temperatures at coastal recreational monitoring sites between 2015 to 2018 shows that temperatures may naturally reach 25 degrees celsius. Including a threshold of 25 degrees celsius when such temperatures can be 'naturally' exceeded would unnecessarily restrict stormwater discharges at certain times of the year for no net environmental benefit.</p> <p>The Hearing Panel suggests that the Condition (k) already adequately addresses the effects of temperature through the requirement that the discharge does not cause the natural temperature to be changed by more than three degrees from normal seasonal water temperature fluctuations.</p>
41 – Te Korowai o Ngāruahine Trust	688	<p>Amend</p> <p>Submitter supports Rule 1 and specifically the inclusion of Condition (e) in Rule 1 of the Plan addressing historic heritage, but seeks further dialogue on how adverse effects will be considered in practice. The submitter is uncertain if the Council is best placed to determine if Condition (e) is met.</p> <p>If an agreement cannot be reached, submitter seeks amendment to Rule 1 to make stormwater discharges a discretionary activity (rather than Permitted activity).</p>	<p>Decline</p> <p>The issue is one of managing adverse effects from normal incidental discharges of stormwater. In most cases, allowing stormwater discharges associated with residential premises, production land, parks and reserves, and smaller benign industrial and trade premises adjacent to the coastal marine area can be permitted as they will generally be of a scale, type and location that any adverse effects on historic heritage values (and other values) are less than minor. However, in isolated circumstances this might not be the case – hence the need for Condition (e) addressing no adverse effects on scheduled historic heritage values that would apply if an activity was having unexpected/unintended impacts.</p> <p>In terms of who is best placed to make that determination as to the significance of any effects, the Council has the regulatory responsibilities to monitor and enforce its regional plans. However, Hearing Panel note that in making that determination it will be informed by the advice and guidance by others, including tangata whenua where the values associated with sites of significance are potentially being impacted upon. Some of this guidance would be set out in the Plan, through its policies or scheduled of sites of</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			significance, while on other occasions it might be informed by further individual engagement with iwi or hapū. With regards to changing the Activity classification from Permitted to Discretionary, the Hearing Panel recommends declining the relief sought.
42 – Ngati Rahiri Hapū	689	Amend Submitter expresses concern for conflicting activities between Activity Description (a) and (b) of Rule 1 of the Plan and seeks amendment to Activity Description (b) to read: <i>Stormwater discharge into water or onto land in the coastal marine area that either:</i> <i>(a) does not convey stormwater from any industrial or trade premises, or</i> <i>(b) conveys stormwater from industrial or trade premises that:</i> (i) cover a total area of 2 ha or less; and (ii) do not use or store hazardous substances [...]	Decline Stormwater is defined within the Plan (in accordance with the <i>National Planning Standards</i>) and means "...runoff that has been channelled, diverted, intensified or accelerated by human modification of a land surface or runoff from the surface of any structure, as a result of precipitation and includes any contaminants contained within." The Hearing Panel recommends declining the relief sought by the submitter in that granting the relief would significantly increase compliance costs (for no net environmental gain) on a range of businesses by including a requirement for small industrial and trade premises (less than 2 ha) to obtain a consent to discharge stormwater. The definition of industrial or trade premises includes a large variety of premises such as surf lifesaving clubs, dairies etc. Stormwater discharges to the coastal marine area from these premises (recognising that they cannot use or store hazardous substances) are expected, based on previous coastal monitoring, to have less than minor adverse effects.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	690	Support Retain Rule 1 of the Plan as notified.	Accept Support noted. Rule 1 is retained subject to minor amendments as requested by other submitters that do not change the rule's scope.
48 – Taranaki District Health Board	691	Support Retain Rule 1 of the Plan as notified.	Accept Support noted. Rule 1 is retained subject to minor amendments as requested by other submitters that do not change the rule's scope.
53 - Taranaki Regional Council	692	Amend Submitter seeks amendment to the activity classification of Rule 1 of the Plan to include a schedule of hazardous substances, the type and quantity of which would warrant regulating through the resource consent process. Refer to threshold values that trigger controls under <i>Hazardous Substances and New Organisms Act 1996</i> .	Accept The definition of hazardous substances is very broad and includes many normal day-to-day items and products such as detergents, household cleaners etc. As a result, Rule 1 is likely to unnecessarily capture all industrial or trade premises regardless of quantities and risk to the environment.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	<p>The Hearing Panel recommends granting the relief sought by the submitter to include a schedule of hazardous substances limits (setting out for the reader's information hazardous property threshold criteria under the <i>Hazardous Substances and New Organisms Act</i>) and amending Rule 1 to read:</p> <p><i>Stormwater discharge into water or onto land in the coastal marine area that either:</i></p> <p>(a) does not convey stormwater from any industrial or trade premises, or</p> <p>(b) conveys stormwater from industrial or trade premises that:</p> <p>(i) cover a total area of 2 ha or less; and</p> <p>(ii) do not use or store hazardous substances <u>in quantities or of a type that exceed any of the hazardous property threshold criteria identified in Schedule 8AA.</u></p> <p>As well as the inclusion of an additional Schedule identifying the hazardous substances and quantities which are identified in Schedule 8AA [Hazardous substance thresholds].</p>
58 – Te Atiawa	693	<p>Amend</p> <p>Submitter suggests that storm water discharged from an industrial or trade premises should be assessed in terms of discharge constituents, volume and frequency, and the associated environmental impacts. They contend that land size should not be a consideration when assessing discharges of this nature.</p> <p>Amend Rule 1 by deleting activity description (b)(i) cover a total area of 2 ha or less;.</p>	<p>Decline</p> <p>Stormwater is defined in the Plan and means "...runoff that has been channelled, diverted, intensified or accelerated by human modification of the land surface or runoff from the external surface of any structure as a result of precipitation (rainfall) and includes entrained contaminants and sediment (including that generated during construction or earthworks)."</p> <p>The Hearing Panel recommends declining the relief sought by the submitter in that granting the relief would significantly increase compliance costs (for no net environmental gain) on a range of businesses by including a requirement for small industrial and trade premises (less than 2 ha) to obtain a consent to discharge stormwater. The RMA definition of industrial or trade premises includes a large variety of premises such as surf lifesaving clubs, dairies etc. Stormwater discharges to the coastal marine area from these premises (recognising that they cannot use or store hazardous substances) are expected to have less than minor adverse effects.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
58 – Te Atiawa	694	Amend	Accept
		Submitter seeks amendment to Condition (i) of Rule 1 of the Plan to read: <i>(i) the discharge does not render marine organisms unsuitable for human consumption within recognised mātaihai reefs/resources.</i>	The submitter notes that full extent of mātaihai reefs/resources have not been mapped and therefore requests that Rule 1 be applied to all marine organisms. The Hearing Panel recommends granting the relief sought by the submitter.
58 – Te Atiawa	695	Amend	Decline
		Submitter seeks amendment to Rule 1 of the Plan by amending the activity classification to a discretionary activity (rather than a permitted activity) in order to provide iwi the opportunity to be involved in the decision making process to ensure conditions of consent are monitored.	The Hearing Panel recommends declining the relief sought by the submitter. To change the activity classification to discretionary activity would require all industrial or trade premises to require a resource consent. This would capture (and impose unnecessary consenting and compliance costs) on all surf lifesaving clubs, dairies and small trade premises that generally have no or less than minor adverse effects. The Hearing Panel further notes the number of premises likely to face these increased costs given the significant urban areas adjacent to the coast including New Plymouth, Waitara, Oakura, Urenui and Patea. The Hearing Panel notes that coastal monitoring over the life of the current Coastal Plan has identified no issues with stormwater contributing to more than minor adverse effects to coastal water quality. Therefore, to now require all properties (urban, rural, industrial and trade premises) to get a resource consent regardless of having less than minor adverse effects is not considered appropriate. The Hearing Panel considers the current activity classification is sufficient and should be retained as currently notified.
61 – Te Rūnanga o Ngāti Ruanui Trust	696	Amend	Accept in part
		Submitter seeks amendment to Rule 1 of the Plan by making several amendments to the standards, terms and conditions to read: [...] <i>(d) the discharge does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems] and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat];</i>	The submitter has made multiple requests to amend the conditions of Rule 1. Each of these requests are addressed point by point in the following: <ul style="list-style-type: none"> The Hearing Panel agrees to include reference to taonga species as requested but suggest that a new condition be included to read: <i><u>(ee) the discharge does not have a significant adverse effect on the values associated with taonga species as identified in Schedule 4C [Taonga species];</u></i>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(e) the discharge does not have an adverse effect on the values associated with <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage];</p> <p>(f) the discharge does not have adverse effect on Schedules 1 and 2</p> <p>(g) the activity does not have any adverse effects on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</p>	<ul style="list-style-type: none"> The Hearing Panel does not consider the inclusion of “cultural” necessary or useful within Condition (e). The definition of historic heritage includes cultural considerations and captures sites of significance. The Hearing Panel is uncertain as to what else needs to be captured or could be captured by including “cultural”. With regards to other cultural aspects these are better addressed separately, e.g. Condition (ee) covers taonga species. Hearing Panel recommend retaining Condition (e) as currently notified within the Proposed Plan. The Hearing Panel does not believe that the inclusion of Schedules 1 and 2 adds any value to the rule. The Rule covers small standard stormwater discharge activities and any effects must be localised, minor and transitional. Certainty not at a scale that they would have an impact on an entire coastal management area or have an impact on the significant values and attributes of areas with outstanding natural character or natural features and landscapes. The Hearing Panel recommends declining the inclusion of proposed Condition (f). By definition, historic heritage includes sites of significance to Māori, therefore, the Hearing Panel does not consider it appropriate to create a standalone condition since it is already provided for within Condition (e). The Hearing Panel recommends declining the request for a new proposed Condition (g).
Rules 1 to 17 – Discharges			
52 – Emily Bailey	697	<p>Amend</p> <p>Submitter seeks amendments to Rules 1 to 17 of the Plan that reference point source contaminant discharges, to make discharging into the coastal environment a prohibited activity.</p>	<p>Decline</p> <p>Stormwater is defined within the Plan (in accordance with the <i>National Planning Standards</i>) and means “...runoff that has been channelled, diverted, intensified or accelerated by human modification of a land surface or runoff from the surface of any structure, as a result of precipitation and includes any contaminants contained within.”</p> <p>Rules 1 to 17 capture many different activities most of which involve point source discharges. It is appropriate that a coastal management regime be in</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			place to manage adverse effects based upon the size and the significance of those adverse effects rather than banning all discharge activities outright. This is why the Plan includes a number of different rules relating to point source contaminant discharges as each rule regulates a different kind of discharge or location type. Some discharges have minor risks that do not warrant requiring people going through the consents process. Other point source discharges to the coastal marine area may also be provided for subject to going through the consenting process to ensure risks are fully assessed and specific conditions imposed to avoid, remedy or mitigate any adverse effects. Prohibiting such activities outright is not considered appropriate and is likely to be inconsistent with both the RMA and the <i>New Zealand Coastal Policy Statement</i> .
NEW Rule 1A – Stormwater discharges			
29 – Department of Conservation	698	<p>Amend</p> <p>Submitter seeks amendment to the Plan to include a new rule, which makes stormwater discharge in the Outstanding Value and Estuaries Unmodified coastal management areas a controlled activity. The submitter seeks that the matters of control should be to the same effect as the conditions of Rule 1.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. Stormwater is defined within the Plan and means “...runoff that has been channelled, diverted, intensified or accelerated by human modification of the land surface or runoff from the external surface of any structure as a result of precipitation (rainfall) and includes entrained contaminants and sediment (including that generated during construction or earthworks).”</p> <p>The Hearing Panel does not believe it would be appropriate to require consents from all premises to authorise the discharge of rainfall runoff from their land. The requested relief would capture a large number of premises and businesses such as camping grounds, dairies and small trading premises (and impose unnecessary consenting and compliance costs) immediately adjacent to Outstanding Value and Estuaries Unmodified coastal management areas.</p> <p>Coastal monitoring over the life of the current Coastal Plan has identified no issues with stormwater contributing to more than minor adverse effects in these areas to coastal water quality. Therefore, to now require all properties (urban, rural, industrial and trade premises) immediately adjacent to Outstanding Value and Estuaries Unmodified coastal management areas to get a resource consent, regardless of having less than minor adverse effects, is not considered appropriate.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel notes that any permitted activity is still subject to compliance with the standards, terms and conditions of the rule, which will ensure permitted activities are carried out in a manner that will avoid, remedy or mitigate effects on coastal water quality and associated values and uses.
Rule 2 – Stormwater discharges			
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	699	Support Retain Rule 2 of the Plan as notified.	Accept Support noted. Rule 2 is retained as notified, subject to minor inconsequential amendments that do not change the Rule's scope.
Further submissions – Port Taranaki Ltd (32)		Support	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
47 – Fonterra	700	Support Retain Rule 2 of the Plan as notified.	Accept Support noted. Rule 2 is retained as notified, subject to minor inconsequential amendments that do not change the Rule's scope.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
61 – Te Rūnanga o Ngāti Ruanui Trust	701	Amend Submitter seeks amendment to Rule 2 (discretionary activity) of the Plan to include standards, terms and conditions to read: <i><u>(a) discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></i> <i><u>(b) discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></i> <i><u>(c) discharge is consistent with iwi management plan.</u></i> AND Include the following notification note: <i><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></i>	Decline The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities. The Hearing Panel recommends declining the relief sought by the submitter noting that it is not standard planning practice for discretionary or non-complying rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22 and 27 being given effect to. In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately
Further submissions - Trans-Tasman Resources (6)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. The Hearing Panel highlights the risks that including unnecessary operational detail in the Plan might make the Plan overly verbose plus are likely to be subject to change over the life of the Plan. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion". The Hearing Panel notes recommendations to delete such notification requirements from the Plan and notes that the relevant notification requirements are set out in sections 95A to 95G of the RMA.
Rule 3 – Stormwater discharges			
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	702	Support Retain Rule 3 of the Plan as notified.	Accept Support noted. Rule 3 is retained as notified, subject to minor inconsequential amendments that do not change the Rule's scope.
61 – Te Rūnanga o Ngāti Ruanui Trust	703	Amend Submitter seeks amendment to Rule 3 (non-complying activity) to include standards, terms and conditions to read: <u>(a) discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u> <u>(b) discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u> <u>(c) discharge is consistent with iwi management plan.</u> AND Include the following notification note: <u>Resource consent applications under this Rule will be notified to tangata whenua.</u>	Decline The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities. The Hearing Panel recommends declining the relief sought noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22 and 27 being given effect to. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly

Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	<p>changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to “matters of control/discretion”. The Hearing Panel notes recommendations to delete such notification requirements from the Plan and notes that the relevant notification requirements are set out in sections 95A to 95G of the RMA.</p> <p>The Hearing Panel further notes that, in addition to the requirements of the RMA, notification to iwi can also be addressed through Mana Whakahono a Rohe agreements without the need to be included in the Plan rules.</p>
Rule 4 – Petroleum dispersal use in the Port			
21 – Climate Justice Taranaki	704	<p>Amend</p> <p>Submitter opposes the use of petroleum dispersant in any of the coastal management areas and certainly not as a permitted activity. Notes that two dispersants approved for use by Maritime NZ – Corexit 9500 and Corexit 952 – are extremely toxic to humans and the environment and seek that:</p> <ul style="list-style-type: none"> the use of the above-mentioned and other toxic petroleum dispersants be Prohibited in all coastal management areas; and the use of non-toxic dispersants be Discretionary (require a resource consent). 	<p>Grant in kind</p> <p>Petroleum dispersants are used in the event of an oil spill in order to aid oil spill response. They are very much a tool for avoiding, remedying or mitigating adverse effects in the event that capital dredging in Port Taranaki results in a natural marine oil seepage event. The rule covers an emergency situation not planned or foreseen as part of their consented activities.</p> <p>The Council recognise that the use of petroleum dispersants can, in some cases, lead to adverse environmental effects. Accordingly, their use in an emergency event would only be used where other alternatives (including inaction) would have worst environmental consequences. The Hearing Panel notes that Gamalin is generally the preferred dispersant as it is less toxic and has been approved by Maritime NZ for most crude oil treatment. Corexit 9500 and Corexit 952 would only be used in very limited situations where other alternatives are unsuitable.</p> <p>Notwithstanding the above, the submitter and others have highlighted a broader issue of duplicating regulatory controls addressed by Maritime New Zealand under other legislation. The Hearing Panel therefore recommends that Rule 4 be deleted.</p>
40 – Te Rūnanga o Ngāti Mutunga	705	<p>Amend</p> <p>Submitter opposes permitting the use of petroleum dispersants in the Port and seeks amendment to Rule 4 of the Plan that such activities be a discretionary activity.</p>	<p>Grant in kind</p> <p>Petroleum dispersants are used in the event of an oil spill in order to aid oil spill response. They are very much a tool for avoiding, remedying or mitigating adverse effects in the event that capital dredging in Port Taranaki</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>results in a natural marine oil seepage event. The rule covers an emergency situation not planned or foreseen as part of their consented activities.</p> <p>The Council recognise that the use of petroleum dispersants can, in some cases, lead to adverse effects. Accordingly, dispersants are only used in an emergency event where other alternatives (including inaction) would have worst environmental consequences.</p> <p>Notwithstanding the above, the submitter and others have highlighted a broader issue of duplicating regulatory controls addressed by Maritime New Zealand under other legislation. The Hearing Panel therefore recommends that Rule 4 be deleted.</p>
41 – Te Korowai o Ngāruahine Trust	706	Amend	No relief necessary
		Submitter supports Rule 4 as a permitted activity, however, seeks the inclusion of a new condition that would require the notification of appropriate iwi authorities as soon as practicable after an event.	The Hearing Panel notes that, in response to other submitters' requests, it is recommended that the Council delete Rule 4 as it is addressed under other legislation.
42 – Ngati Rahiri Hapū	707	Amend	Decline
		Submitter noted concerns that rules relating to the use of petroleum dispersants is confined to the Port coastal management area and suggest that the rule apply to all coastal management areas (specifically those of outstanding value). Submitter seeks amendment to Rule 4 to include all coastal management areas.	<p>The submitter's comments are noted.</p> <p>Rule 4 addresses a quite discreet activity associated with capital dredging in Port Taranaki that results in a natural marine oil seepage event. Oil seepage associated with maritime accidents are separately addressed under maritime legislation. The Hearing Panel suggests that the use of dispersants in an emergency event in other coastal management areas is less likely and in which case can be adequately under maritime legislation (or the emergency provisions of the RMA).</p> <p>Notwithstanding the above, other submitters have highlighted a broader issue of duplicating regulatory controls addressed under other legislation. The Hearing Panel therefore recommends that Rule 4 be deleted.</p>
54 – Maritime New Zealand	708	Amend	Accept
		Submitter seeks amendment to the Plan by deleting Rule 4, OR Alternatively, amend Rule 4 by replacing the term "petroleum dispersant" with "oil spill control agent" to clarify the difference between a dispersant to be used on	The submitter and others have highlighted a broader issue of duplicating regulatory controls addressed under other legislation. The submitter notes that under Part 132 of the <i>Marine Protection Rules</i> the definition of "oil spill"

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		petroleum products (spilt in the marine environment) and petroleum based dispersants.	reads " <i>an actual or probable release, discharge or escape of oil</i> " and encompasses natural oil seeps resulting from dredging activities.
Further submissions – Port Taranaki Ltd (32)		Oppose/Support in part	<p>Part 132.20 of the <i>Marine Protection Rules</i> also identifies who may discharge an Oil spill Control Agent (OSCA) for which petroleum dispersants are one type in the event of an oil spill. Of note, the discharge must be authorized under a marine oil spill contingency plan on by an on-scene commander.</p> <p>Port Taranaki (submitter 32) have outline concerns (further submission and at the hearing of submissions) for the deletion of Rule 4, in particular how this might affect dredging operations at the Port for which the Port holds a consent. Of note, one of the consent conditions requires the Port to provide the Council with a contingency plan outlining measures to be taken in the event of an unforeseen spill or discharge of oil. The Port are concerned that the removal of the rule would inhibit the Port from undertaking the procedures for oil spill response should a spill occur and are concerned that they would subsequently be required to obtain a resource consent or disperse using emergency works under the RMA.</p> <p>Of note, the <i>Port Oil Spill Contingency Plan</i> focuses on containment and recovery and no petroleum dispersants are listed under the spill response equipment as available should a spill occur. Therefore, Rule 4 is potentially misleading as it would appear to allow their use when (for the Port) this would not be appropriate under Part 132.20 of the <i>Marine Protection Rules</i>.</p> <p>In addition, should a spill warrant the use of a petroleum dispersant (under a tier II spill) the <i>Marine Protection Rules</i> would supercede the rules in the Coastal Plan to ensure that necessary oil response procedures are fulfilled.</p> <p>The Hearing Panel therefore considers that Rule 4 is unnecessary and does not provide any value to Plan users and that the necessary provisions are addressed through other means. The Hearing Panel recommends that Rule 4 be deleted.</p>
55 – Kiwis Against Seabed Mining	709	Support	Decline
		Submitter supports Rule 4 of the Plan as a permitted activity.	Support noted. However, in response to requests by other submitters, the Hearing Panel recommends deleting Rule 4 to avoid duplicating regulatory controls addressed under other legislation.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
56 – Greenpeace	710	Support	Decline
		Submitter supports Rule 4 of the Plan as a permitted activity.	Support noted. However, in response to requests by other submitters, the Hearing Panel recommends deleting Rule 4 to avoid duplicating regulatory controls addressed under other legeslation.
58 – Te Atiawa	711	Amend	No relief necessary
		Submitter seeks amendment to Rule 4 of the Plan by adding a new condition (d) to read: <i><u>(d) iwi are notified as soon as practicable after the event.</u></i>	The Hearing Panel notes that in response to requests by other submitters, it is recommended that Rule 4 be deleted to avoid duplicating regulatory controls addressed under other legeslation.
Rule 5 – Untreated human sewage			
5 – Point Board Riders	712	Support	Accept
		Retain Rule 5 of the Plan prohibiting untreated human sewage into the coastal marine area.	Support noted. Rule 5 is retained as notified.
21 – Climate Justice Taranaki	713	Support	Accept
		Retain Rule 5 of the Plan as notified.	Support noted. Rule 5 is retained as notified.
29 – Department of Conservation	714	Support	Accept
		Retain Rule 5 of the Plan as notified.	Support noted. Rule 5 is retained as notified.
40 – Te Rūnanga o Ngāti Mutunga	715	Support	Accept
		Retain Rule 5 of the Plan as notified.	Support noted. Rule 5 is retained as notified.
48 – Taranaki District Health Board	716	Support	Accept
		Retain Rule 5 of the Plan as notified.	Support noted. Rule 5 is retained as notified.
58 – Te Atiawa	717	Support	Accept
		Retain Rule 5 of the Plan as notified.	Support noted. Rule 5 is retained as notified.
Rule 6 – Wastewater treatment plant discharges			

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
8 – Silver Fern Farms	718	Support	Accept
		Retain Rule 6 of the Plan to provide for existing discharges of contaminants to coastal waters.	Support noted. Rule 6 is retained as notified.
Further submissions – Federated Farmers (2)		Support	
21 – Climate Justice Taranaki	719	Amend	Decline
		The submitter opposes allowing an existing wastewater discharge that contains human sewage to discharge to the coastal management area after its consent expires and seeks that once existing consents expire, that the activity be Prohibited in all coastal management areas.	The Hearing Panel recommends declining the relief sought. The relief sought would immediately preclude existing lawful discharges of municipal waste discharges to the coastal marine area in the absence of any other practicable options. To divert the quantities of waste onto land or other receiving environments is likely to be impracticable plus result in worse environmental outcomes due to the quantities involved and the lack of suitable locations to ensure the waste can be properly and safely assimilated to avoid, minimise or mitigate adverse environmental effects. The Hearing Panel notes Taranaki only has three municipal wastewater discharges. The resource consents for these marine outfalls include conditions that the consent holder must adhere to. These conditions are designed to minimise adverse effects by including limits on the discharge (pertaining to quality and quantity) and managing impacts on the receiving environment. Consent holders must regularly reassess whether the current system remains to be the best practicable option, in light of technological advances and changing circumstances. Community involvement in the monitoring and management of these discharges, through involvement plans and stakeholder meetings, is also required in the resource consents.
Further submissions – Royal Forest and Bird Protection Society (43)		Support	The Hearing Panel suggests that some provision must be made in the rules to provide for the discharge of wastewater that contains treated human sewage. Most New Zealand cities discharge water directly or indirectly into the coastal marine area. However, this rule is a discretionary activity, which means a resource consent may be granted or declined subject to the Plan's policies. A discharge consent application is subject to meeting the directions and guidance set out in General Policies 1 to 21 and Activity-specific Policies 22, 24 and 26. With these policies any discharge of treated wastewater must be of an acceptable quality and can only be considered when more appropriate alternatives have been considered. This rule is in line with the requirements

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>of the <i>New Zealand Coastal Policy Statement</i> Policy 23 [Discharge of contaminants] (2) and (3) and meets the requirements of the RMA.</p> <p>It is the Hearing Panel's view that providing the option to consider discharges of treated wastewater into the coastal marine area is necessary in order to provide for the requirements of the general public. The Hearing Panel is satisfied that through the resource consents process, adverse environmental effects can be appropriately avoided, remedied or mitigated. Policy 26 in particular is highlighted whereby it is Council's expectation that the best practicable option be adopted to improve the quality of the discharge and reduce the quantity of the discharge over time.</p>
23 – New Plymouth District Council	720	Support	Accept
		Retain Rule 6 of the Plan as a discretionary activity to support the continuation of wastewater discharges at the Waiwhakaiho.	Support noted. Policy 6 is retained as notified.
38 – Nigel Cliffe	721	Other	No relief necessary
		Submitter notes opposition (in relation to the toilet at Paora Road) to discharges of fluids or solids to the ocean. The submitter does not wish the toilet to discharge any fluids or solids either directly or indirectly by way of ground water. The submitter wishes to have the location of the toilet reassessed.	<p>Submitter's comments are noted and have been passed on to the Inspectorate section of the Council for further investigation.</p> <p>The Hearing Panel have been advised by Council officers that the toilet at Paora Road has previously been investigated for compliance and that samples indicated the toilet is compliant with relevant regional rules. The Council will conduct further monitoring to ensure that there are no unconsented discharges.</p>
40 – Te Rūnanga o Ngāti Mutunga	722	Amend	Decline
		<p>Submitter does not support the disposal of treated or untreated human sewage to any water body due to the effect this will have on the mouri and wairua of the receiving water body. The submitter would prefer to see alternative disposal to land of the wastewater from the New Plymouth District Council's Treatment station at Waiwakaiho before the end of the current consent in 2041.</p> <p>Submitter seeks amendment to Rule 6 of the Plan to make all discharges of treated wastewater to the coastal marine area a prohibited activity (rather than a discretionary activity).</p>	<p>The Hearing Panel recommends declining the relief sought whereby the continuation of existing consented activities to discharge treated human sewage is prohibited.</p> <p>The relief sought would immediately preclude existing lawful discharges of municipal wastewater discharges to the coastal marine area in the absence of any other practicable options. To divert the quantities of waste onto land or other receiving environments is likely to be impracticable plus result in worst environmental outcomes due to the quantities involved and the lack of suitable locations to ensure the waste can be properly and safely assimilated to avoid, minimise or mitigate adverse environmental effects.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			It is Hearing Panel's view that providing the option to consider discharges of treated wastewater into the coastal marine area is necessary in order to provide for the requirements of the general public. The Hearing Panel is satisfied that through the resource consents process, adverse environmental effects can be appropriately avoided, remedied or mitigated. Policy 26 in particular is highlighted whereby it is Council's expectation that the best practicable option be adopted to improve the quality of the discharge and reduce the quantity of the discharge over time.
61 – Te Rūnanga o Ngāti Ruanui Trust	725	<p>Amend</p> <p>Submitter seeks amendment to Rule 6 (discretionary activity) of the Plan to include standards, terms and conditions to read:</p> <p><u>(a) discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></p> <p><u>(b) discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></p> <p><u>(c) discharge is consistent with iwi management plan.</u></p> <p>AND</p> <p>Include the following notification note:</p> <p><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></p>	<p>Grant in kind</p> <p>The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities.</p> <p>The Hearing Panel recommends declining the relief noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies.</p> <p>Notwithstanding the above, the Hearing Panel notes that all matters identified by the submitter would generally be considered through any consenting process with Policies 1 to 21, 22 24 and 26 being given effect to.</p> <p>In relation to notification requirements proposed by the submitter, the Hearing Panel further notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements.</p> <p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. Hearing Panel note that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amend the headings throughout the rules section to refer only to "matters of control/discretion" and to delete any reference to notification requirements in the Plan (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		<p>Support</p>	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>The Hearing Panel further notes that, in addition to the requirements of the RMA, notification to iwi can also be addressed through Mana Whakahono a Rohe agreements without the need to be included in the Plan rules.</p> <p>At the hearing of submissions, submitter (41) further presented on Rule 6 and considers that if Rule 6 is to remain then clearer wording should be used to ensure that only lawfully established discharges be authorised by this rule. The Hearing Panel consider this relief is consistent with the intent of the rule and adds clarity for plan users. The Hearing Panel recommends amending the gateway to refer to “existing <i>lawfully established</i> wastewater discharges”.</p> <p>For consistency, the Hearing Panel also recommend similar wording be incorporated into Policy 24 which addresses existing discharges of wastewater containing human sewage.</p>
Rule 7 – Wastewater treatment plant discharges			
21 – Climate Justice Taranaki	726	Amend Submitter opposes allowing new wastewater discharge that contains human sewage to discharge to the coastal management area and request that the activity be a prohibited activity in all coastal management areas.	Accept The Hearing Panel recommends accepting the relief requested by the submitter. The Hearing Panel notes that previous recommendations to prohibit <u>new</u> discharges of treated human sewage to the CMA would not affect currently consented discharges of treated human sewage but would limit the region to utilizing the three existing discharges at the New Plymouth, Hawera and Pātea outfalls into the future or finding land-based solutions.
Further submissions - Royal Forest and Bird Protection Society (43)		Support	<p>The Hearing Panel suggests prohibiting new discharges of treated wastewater containing human sewage to the CMA is in line with Policy 11 [Coastal water quality] of the Plan, which directs that coastal water quality be maintained where it is good. The change is broadly supported by other submitters including tangata whenua.</p> <p>The amendment sought would be reflected by deleting Rule 7 and including the Open Coast in coastal management areas addressed under Rule 8.</p>
40 – Te Rūnanga o Ngāti Mutunga	727	Amend Submitter seeks amendment to Rule 7 of the Plan to make all new discharges of treated wastewater to the coastal marine area a prohibited activity (rather than a discretionary activity).	Accept The Hearing Panel recommends accepting the relief requested by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response

Rule 8 – Wastewater treatment plant discharges			
5 – Point Board Riders	731	<p>Support</p> <p>Retain Rule 8 of the Plan prohibiting new wastewater discharges in the designated coastal management areas.</p>	<p>Accept</p> <p>Support noted. Rule 8 is retained subject to the addition of the Open Coast coastal management area as requested by other submitters.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
21 – Climate Justice Taranaki	732	Support Retain Rule 8 of the Plan prohibiting new wastewater discharges in the designated coastal management areas (but seek that the activity be prohibited in the other coastal management areas as well).	Accept Support noted. Rule 8 is retained subject to the addition of the Open Coast coastal management area as requested by other submitters.
Further submissions - Royal Forest and Bird Protection Society (43)		Support	
40 – Te Rūnanga o Ngāti Mutunga	733	Support Retain Rule 8 of the Plan prohibiting new wastewater discharges in the designated coastal management areas.	Accept Support noted. Rule 8 is retained subject to the addition of the Open Coast coastal management area as requested by other submitters.
41 – Te Korowai o Ngāruahine Trust	734	Amend Submitter seeks amendment to Rule 8 of the Plan to include any new wastewater discharge to the Open Coast thereby making all such discharges in the coastal marine area a prohibited activity.	Accept The Hearing Panel recommends accepting the relief requested by the submitter. The Hearing Panel notes that the recommendation to prohibit <u>new</u> discharges of treated human sewage to the coastal marine area would not affect currently consented discharges of treated human sewage but would limit the region to utilizing the three existing discharges at the New Plymouth, Hawera and Pātea outfalls into the future, or finding land-based solutions. The Hearing Panel suggests prohibiting new discharges of treated wastewater containing human sewage to the coastal marine area is in line with Policy 11 [Coastal water quality] of the Plan, which directs that coastal water quality be maintained where it is good. The change is broadly supported by other submitters, including tangata whenua. The amendment sought would be reflected by deleting Rule 7 and including the Open Coast in coastal management areas addressed under Rule 8.
Further submissions – Climate Justice Taranaki Inc (21)		Support	
58 – Te Atiawa	735	Support Retain Rule 8 prohibiting new wastewater discharges in the designated coastal management areas.	Accept Support noted. Rule 8 is retained subject to the addition of the open coast coastal management area as requested by other submitters.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 9 – Sampling and biofouling in the Port			
16 – Ministry for Primary Industries	736	<p>Amend</p> <p>Submitter seeks amendment to Rule 9 in order to refine how the Australian/New Zealand Anti-Fouling and In Water Cleaning Guidelines (2013) are translated into the Rules. In particular, to the description of fouling and the activity description.</p> <p>Amend permitted activity rule for in-water cleaning of biofouling to read:</p> <p><u>Activity:</u></p> <p><u>In-water cleaning of biofouling from the part of a ship, moveable object or navigation aid that is normally below the water surface, resulting in the discharge of a contaminant into water in the coastal marine area and any associated:</u></p> <p><u>(a) deposition on the foreshore or seabed.</u></p> <p><u>Note: If the activity does not meet the standards, terms and conditions in this Rule refer to Rule 13.</u></p> <p><u>Standards, terms and conditions:</u></p> <p><u>(a) the anti—foul coating on the ship, moveable structure or navigational aid shall not have exceeded its planned service life as specified by the manufacturer, and the cleaning method shall be undertaken in accordance with the coating manufacturer's recommendations;</u></p> <p><u>(b) microfouling may be cleaned without capture;</u></p> <p><u>(c) goose barnacles may be cleaned without capture;</u></p> <p><u>(d) macrofouling (other than goose barnacles) coverage on the ship, moveable structure or navigational aid shall be less than or equal to 2 on the Level of Fouling rank (Floerl et al (2005));</u></p> <p><u>(e) all biological material greater than 50 microns in diameter dislodged during cleaning (other than goose barnacles) shall be captured and disposed of at an approved landfill; and</u></p> <p><u>(f) if any person undertaking or responsible for the cleaning, suspects that harmful or unusual aquatic species (including species designated as unwanted organisms or pest species under the Biosecurity Act 1993) are present on the ship, structure or navigational aid, that person shall take the following steps:</u></p> <p><u>i. any cleaning activities commenced shall cease immediately, and</u></p>	<p>Accept</p> <p>The intention of Rule 9 is to provide for additional hull cleaning activities that are currently prohibited under the current Plan. Hull cleaning currently excludes ships that are greater than 25 metres in length and any ships that have been outside the exclusive economic zone since their last hull cleaning. Many second-generation coastal plans have provisions that allow the cleaning of these hulls provided the appropriate standards, terms and conditions are met.</p> <p>It is Hearing Panel's view that the requested amendments provide additional information that strengthens Rule 9 and aligns with industry requirements and procedures. The Hearing Panel further notes that capture of macrofoul will be an important condition to ensure that the Port and surrounding areas (of note, the nearby area of outstanding value) are safeguarded against any possible invasive marine species introduction.</p> <p>The Hearing Panel recommends granting the relief requested subject to minor inconsequential word changes to align the reading of rules with the remainder of the Plan. The amended rule would read as follows:</p> <p><u>Activity</u></p> <p><u>Discharge of contaminants from the cleaning of biofouling from the part of a ship, moveable object or navigation aid that is normally below the water surface into water in the coastal marine area and any associated:</u></p> <p><u>(deposition on the foreshore or seabed.</u></p> <p><u>Note (1) If the activity does not meet the standards, terms and conditions in this Rule refer to Rule 13.</u></p> <p><u>Note (2) For the purposes of this rule, further guidance is provided in the Anti—fouling and In-water Cleaning Guidelines (June 2013).</u></p> <p><u>Note (3) International vessels arriving into New Zealand waters have additional obligations under the Craft Risk Management Standard: Biofouling on Vessels Arriving to New Zealand (May 2014).</u></p> <p><u>Standards, terms and conditions:</u></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>ii. the Taranaki District Council and the Ministry for Primary Industries shall be notified without unreasonable delay; and</u></p> <p><u>iii. the cleaning may not recommence until notified by the Council to do so, or in the event a designated unwanted organisms or pest species is found, notified to do so by the Ministry for Primary Industries.</u></p> <p><u>Notes</u></p> <p><u>1. For the purposes of the above, further guidance is provided in the Anti—fouling and In-water Cleaning Guidelines (June 2013).</u></p> <p><u>2. International vessels arriving into New Zealand waters have additional obligations under the Craft Risk Management Standard: Biofouling on Vessels Arriving to New Zealand (May 2014).</u></p> <p><u>Footnotes</u></p> <p><u>Defined in Floerl et al (2005) A Risk-based Predictive Tool to Prevent Accidental introductions of Nonindigenous Marine Species as: Light Fouling - 1—5% of visible surface covered by very patchy macrofouling. Remaining area often covered in microfouling.</u></p>	<p><u>(a) the anti—foul coating on the ship, moveable object or navigation aid shall not have exceeded its planned service life as specified by the manufacturer, and the cleaning method shall be undertaken in accordance with the coating manufacturer's recommendations;</u></p> <p><u>(c) the activity does not involve any species designated as unwanted organisms or pest species under the Biosecurity Act 1993;⁴</u></p> <p><u>(d) macrofouling (other than goose barnacles) coverage on the ship, moveable structure or navigational aid is less than or equal to 2 on the Level of Fouling rank (Floerl et al (2005));⁵ and</u></p> <p><u>(e) all biological material that cannot pass through a 50 micron sieve that is dislodged during cleaning (other than goose barnacles) is captured and disposed of at an approved landfill (microfouling and goose barnacles may be cleaned without capture).</u></p> <p>⁴ <u>If any person undertaking or responsible for the cleaning suspects that harmful or unusual aquatic species are present, that person should cease the activity immediately and notify the Ministry for Primary Industries without unreasonable delay. Cleaning should not recommence until notified by the Ministry for Primary Industries.</u></p> <p>⁵ <u>Defined in Floerl et al (2005) A Risk-based Predictive Tool to Prevent Accidental introductions of Nonindigenous Marine Species as: Light Fouling - 1—5% of visible surface covered by very patchy macrofouling. Remaining area often covered in microfouling.</u></p>
Further submissions – Port Taranaki Ltd (32)		Oppose	
33 – New Zealand Defence Force	737	<p>Amend</p> <p>Submitter highlights that cleaning of biofoul is an important measure in controlling undesirable foreign organisms contaminating local waters and seeks amendment to Rule 9 of the Plan to provide for biofouling activities in the Open Coast and Estuaries Modified Coastal Management Areas as a discretionary activity (rather than a non-complying activity).</p>	<p>Decline</p> <p>The Hearing Panel recognises the importance of regular hull cleaning in preventing the spread of invasive biota. However, it is important that the cleaning of biofoul is undertaken in a manner and location where the potential adverse effects of contamination can be addressed in an appropriate and timely manner. This can only be achieved if cleaning practices are undertaken in the appropriate location which minimises the risk of contamination to other locations. The Port is the chosen location for these activities to be undertaken as it is already a largely modified environment, it has high traffic flow so is an ideal place to undertake the activity, plus, it is also the only location within the region that is routinely monitored for invasive marine species.</p> <p>To perform cleaning in locations other than the Port introduces additional and unacceptable risks to those locations and the benefits of providing for the activity do not outweigh the potential risks. The Hearing Panel recommends</p>
Further submission – Royal Forest and Bird Protection Society (43)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			adopting a precautionary approach to minimise the risks of contamination by foreign and invasive organisms to local waters outside the Port by declining the relief sought.
33 – New Zealand Defence Force	738	<p>Amend</p> <p>Submitter generally supports Rule 9 but seeks to amend the standards, terms and conditions of Rule 9(c) to read:</p> <p><i>(c) the Ministry for Primary industries, or subsequent replacement Ministry, is advised <u>immediately without unreasonable delay</u> if a suspected invasion or non-indigenous aquatic species is encountered.</i></p>	<p>Grant in kind</p> <p>The Hearing Panel agrees that immediate contact may not be reasonable and recommend granting the relief in kind (as well as other amendments sought by other submitters) by including guidance in a footnote to the rule. The submitter has highlighted a standard, term and condition that is legally uncertain with reference to 'suspects' which is addressed by amending the condition and inserting guidance in a footnote to read as follows:</p> <p><u><i>(c) The activity does not involve any species designated as unwanted organisms or pest species under the Biosecurity Act 1993; ⁴</i></u></p> <p><u><i>⁴ If any person undertaking or responsible for the cleaning suspects that harmful or unusual aquatic species are present, that person should cease the activity immediately and notify the Ministry for Primary Industries without unreasonable delay. Cleaning should not recommence until notified by the Ministry for Primary Industries.</i></u></p>
40 – Te Rūnanga o Ngāti Mutunga	739	<p>Amend</p> <p>Submitter seeks amendment to the permitted activity rule for in-water cleaning of biofouling in the Port and make such activities a controlled activity.</p>	<p>Decline</p> <p>The regular cleaning of biofoul is a desirable activity and should be encouraged to be undertaken in a timely fashion and provided for in appropriate locations, i.e. the Port. Regular biofouling reduces the risk of foreign organisms contaminating New Zealand waters and are best undertaken in places where the activity can be monitored, controlled and the appropriate actions can be taken immediately if necessary. In this instance, the Port is the only appropriate location and, as such, it is a non-complying activity elsewhere.</p> <p>The Hearing Panel would like to point out that the risks associated with sampling and cleaning of biofouling have been assessed by the Ministry for Primary Industries who have legislative biosecurity responsibilities, including those relating to border control and the enforcement of import health standards. The rule is consistent with their advice and good practice.</p> <p>Changing the permitted activity classification to Controlled may become a potential deterrent to people following best practice and could ultimately discourage people from cleaning and/or slow down the cleaning process. This, in turn, increases the risk to the environment by allowing biofoul</p>

			communities time to grow or proliferate before they are removed from the vessel.
58 – Te Atiawa	740	Amend Submitter opposes permitting in-water cleaning of biofouling in the Port as, in their view, there is no way of monitoring the activity and they are not convinced that the conditions stated will be adhered to. Submitter seeks amendment to Rule 9 of the Plan to make biofouling in the Port a controlled activity (rather than a permitted activity) and that the Council exercise control over such matters to ensure these matters are met by users of the Plan.	Decline The regular cleaning of biofoul is a desirable activity and should be encouraged to be undertaken in a timely fashion and provided for in appropriate locations, i.e. the Port. Regular biofouling reduces the risk of 'dirty' boats and other crafts unintentionally bringing foreign harmful organisms (as hitch-hikers) into the region where they can then establish in our territorial waters. Bio-fouling is best undertaken in places where the activity can be monitored, controlled and the appropriate actions can be taken without delay if necessary. In this instance, the Port is considered the only appropriate location for this activity and, as such, it is a non-complying activity elsewhere. The Hearing Panel would like to point out that the risks associated with sampling and cleaning of biofouling have been assessed by the Ministry for Primary Industries who have legislative biosecurity responsibilities, including those relating to border control and the enforcement of import health standards. The rule is consistent with their advice and good practice. Changing the permitted activity classification to Controlled may become a potential deterrent to people following best practice and could ultimately discourage people from cleaning and/or slow down the cleaning process. This, in turn, increases the risk to the environment by allowing biofoul communities time to grow or proliferate before they are removed from the vessel.

Rule 10 – Sampling and biofouling			
9 – Karen Pratt	741	Amend Submitter seeks amendment to Rule 10 to cover operations such as the recently granted consent for ironsand mining in the EEZ, i.e. artificial structures.	No relief necessary No precise details of amendments sought to Rule 10 have been provided. The Hearing Panel notes that Rule 10 applies to all biofouling activities in the relevant coastal management areas and no further change is considered necessary.
Further submissions – Trans-Tasman Resources (6)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
16 – Ministry for Primary Industries	742	<p>Amend</p> <p>Submitter seeks amendment to Rule 10 of the Plan by removing the word “scraping” from the activity classification, and to include the term “in-water” to describe where the cleaning is taking place and the words “involving” be replaced with “resulting in”, to read:</p> <p><i>In water cleaning Sampling, scraping and/or cleaning of biofouling from the part of a ship, moveable object or navigation aid that is normally below the water surface resulting in involving a discharge of a contaminant substance into water in the coastal marine area and any associated:</i></p> <p><i>(a) deposition on the foreshore or seabed.</i></p>	<p>Accept in part</p> <p>Hearing Panel agrees that scraping is only one method of cleaning of biofouling and that a more general approach is necessary to keep the activity description broad.</p> <p>The Hearing Panel notes that in the Taranaki scenario, the Port wharves and breakwaters are within the coastal marine area and there may be need to remove objects to be cleaned (for example, navigation aids and buoys) from the water to be cleaned on the wharves. The inclusion of “in-water cleaning” would preclude this kind of activity from occurring even though this method offers greater possibility of capture and removal of material.</p> <p>The Hearing Panel further notes that the activity should focus on the discharge rather than the cleaning itself as this is the activity to be managed and recommend restructuring the activity classification of Rule 10 to read as follows:</p> <p><i>Discharge of contaminants from the cleaning of biofouling from the part of a ship, moveable object or navigation aid that is normally below the water surface, into water in the coastal marine area and any associated:</i></p> <p><i>(a) deposition on the foreshore or seabed.</i></p>
Further submissions – Trans-Tasman Resources (6)		Support	
21 – Climate Justice Taranaki	743	<p>Support</p> <p>Retain Rule 10 of the Plan so that any discharges from biofoul cleaning into all coastal management areas, excluding the Port, be a non-complying activity.</p>	<p>Accept</p> <p>Support noted.</p>
Further submissions – Royal Forest and Bird Protection Society (43)		Support	
29 – Department of Conservation	744	<p>Amend</p> <p>Scraping is one type of cleaning that that is used when cleaning biofoul from a ship hull, in addition, it is a method that should not be used with many types of antifoul coatings used on vessels. Sampling is another activity, and should not be included alongside the cleaning of biofoul. Submitter seeks amendment to Rule 10 of the Plan to delete the words “Sampling, scraping and/or” from the activity description.</p>	<p>Accept</p> <p>The Hearing Panel recommends amending the activity classification of Rule 10 with minor changes to accommodate the requests of other submitters to read:</p> <p><i>Discharge of contaminants from the cleaning of biofouling from the part of a ship, moveable object or navigation aid that is normally below the water surface, into water in the coastal marine area and any associated:</i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>(a) deposition on the foreshore or seabed.</i>
33 - New Zealand Defence Force	745	Amend Submitter seeks amendment to Rule 10 of the Plan to provide for biofouling activities in the Outstanding Value and Estuaries Unmodified Coastal Management Areas as a discretionary activity (rather than a non-complying activity).	Decline The Hearing Panel recommends declining the relief sought by the submitter. The request would introduce a high level of risk that the Hearing Panel considers unreasonable and unnecessary. An appropriate place for this activity to occur has been provided for in Port Taranaki. Through Rule 10 a resource consent may be granted as a non-complying activity but subject to the activity proving that effects are minor and not in conflict with the objectives and policies of the Plan.
41 – Te Korowai o Ngāruahine Trust	746	Amend Submitter seeks amendment to Rule 10 of the Plan to make any sampling, scraping and/or cleaning of biofouling in coastal management areas, other than the Port, a prohibited activity (rather than non-complying activity).	Decline The Hearing Panel recommends declining the relief sought by the submitter. Recent case law has confirmed that non-complying activities are subject to a high gateway test where the Council (under section 104D RMA) would need to be satisfied that the adverse effects of the activity will be minor or the activity will not be contrary to the objectives and policies of the Plan. The presumption is that effects must be so minor that it is not likely to matter. However, its classification does allow some activities to at least be considered on a case-by-case basis to see if exceptions apply and could be provided for. prohibited activity status would unnecessarily preclude the consideration of any exceptional circumstances.
Further submissions – Trans-Tasman Resources (6), New Zealand Defence Force (33)		Oppose	
61 – Te Rūnanga o Ngāti Ruanui Trust	747	Amend Submitter seeks amendment to Rule 10 (non-complying activity) of the Plan to include standards, terms and conditions to read: <u><i>(a) discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</i></u> <u><i>(b) discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</i></u> <u><i>(c) discharge is consistent with iwi management plan.</i></u> AND Include the following notification note: <u><i>Resource consent applications under this Rule will be notified to tangata whenua.</i></u>	Decline The submitter has sought the inclusion of standards, terms and conditions for Rules in the Plan relating to discretionary and non-complying activities. The Hearing Panel recommends declining the relief noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. Notwithstanding the above, the Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22 and 28 being given effect to.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Trans-Tasman Resources (6)		Oppose	In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and to delete references to notification requirements from the Plan, which are set out in sections 95A to 95G of the RMA.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
Rule 11 – Abrasive blasting discharges			
26 – Transpower NZ Ltd	748	Amend Submitter supports Rule 11 of the Plan but notes that the <i>National Environmental Standards for Electricity Transmission</i> only applies to existing structures and since there are no existing National Grid structures in the coastal marine area (as identified in the Proposed Coastal Plan for Taranaki) and therefore subject to the Plan, the reference is not required. Further, the <i>National Environmental Standards for Electricity Transmission</i> is not applicable when erecting or placing new structures. Submitter seeks amendment to Rule 11 to delete reference to <i>National Environmental Standards for Electricity Transmission Activities</i> : [...]excluding activities regulated by the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter by removing the reference.
32 – Port Taranaki	749	Amend Submitter suggests that within the Port coastal management area the effects of abrasive blasting discharges are well known and understood. Therefore, submitter seeks amendment to Rule 11 of the Plan to make the activity a controlled activity in	Decline The Hearing Panel recommends declining the relief sought by the submitter. Abrasive blasting is capable of having significant adverse environmental effects. Given the amount of industrial and trade premises in the vicinity of the Port, the storage and transfer of dangerous and hazardous cargos and other

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		the Port coastal management area and draft an appropriate set of matters over which control shall be restricted to.	materials, it is appropriate that such matters be considered on a case-by-case basis as a discretionary activity to ensure adverse effects are appropriately avoided, remedied or mitigated.
41 – Te Korowai o Ngāruahine Trust	750	Amend Submitter seeks amendment to Rule 11 of the Plan to make abrasive blasting discharges in the coastal marine area a non-complying activity (rather than discretionary activity).	Decline The Hearing Panel recommends declining the relief sought by the submitter. Recent case law has confirmed that non-complying activities is a high gateway test where Council (under section 104D of the RMA) would need to be satisfied that the adverse effects of the activity will be minor or the activity will not be contrary to the objectives and policies of the Plan. The presumption is that effects must be so minor that it is not likely to matter. However, it is the Hearing Panel's view that abrasive blasting is an often necessary and routine activity for the maintenance, repair or alterations to existing structures, including wharves, mooring and berthing structures, and bridges. As such, it needs to be provided for. The Hearing Panel recommends retaining the Rule's discretionary activity status to consider abrasive blasting activities on a case-by-case basis to, and if approved, ensure there are conditions addressing the avoidance, remedying or mitigating of adverse effects. prohibited activity status would preclude these considerations.
61 – Te Rūnanga o Ngāti Ruanui Trust	751	Amend Submitter seeks amendment to Rule 11 (discretionary activity) of the Plan to include standards, terms and conditions to read: <u>(a) discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u> <u>(b) discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u> <u>(c) discharge is consistent with iwi management plan.</u> AND Include the following notification note: <u>Resource consent applications under this Rule will be notified to tangata whenua.</u>	Decline The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities. The Hearing Panel recommends declining the relief sought noting that it is not standard planning practice for discretionary or non-complying activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22, 30, 39, 40 and 41 being given effect to. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly

Ngāruahine Trust (41), Te Atiawa (58)			<p>changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and to delete references to notification requirements from the Plan (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p> <p>The Hearing Panel further notes that, in addition to the requirements of the RMA, notification to iwi can also be addressed through Mana Whakahono a Rohe agreements without the need to be included in the Plan rules.</p>
Rule 12 – Seismic surveying and bathymetric testing			
6 – Trans-Tasman Resources Ltd	752	Support	Decline
		Retain Rule 12 of the Plan noting surveys and tests are important and useful for establishing or monitoring key aspects of the coastal environment and that the effects are minor and transitory.	Support noted. However, the Hearing Panel notes that Rule 12 is recommended to be split into two rules, a permitted activity for bathymetric testing and an additional rule (Rule 12A) for seismic surveying as a controlled activity.
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Support	Adverse effects of bathymetric testing are less than minor and can be appropriately managed through the permitted activity. However, adverse effects of seismic testing (particularly in relation to indigenous biodiversity) may be more uncertain. The controlled activity classification is therefore recommended so that the Council can ensure that adverse effects on indigenous biodiversity are appropriately considered and addressed through a consenting process.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	At the hearing, the submitter presented further on Rule 12 noting that the rule had been broken into two rules addressing bathymetric testing and seismic surveying separately. The submitter requested that standards, terms and conditions addressing taonga species be deleted and that reference to Schedule 4 only refer to those species that are 'threatened', 'at risk', or 'regionally distinctive', as well as the ecosystems which are rare or uncommon. The Hearing Panel notes that standards, terms and conditions relating to taonga species have been included as it is considered necessary to recognise and provide protection for those species that hold significant value to local iwi. These species were identified through the iwi deeds of settlement

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			and are considered necessary to give effect to Objectives 4, 8, 9, 10, 11 and 12 and Policies 14B, 15, 16 and 18 of the Plan.
21 – Climate Justice Taranaki	753	Amend Submitter opposes further petroleum prospecting and exploration and seek that the Plan be amended to make all seismic surveying for petroleum in any coastal management area a prohibited activity.	Decline The Hearing Panel recommends declining the relief. The Hearing Panel notes that seismic surveying and bathymetric testing provide useful and important insights into crustal activities that occur within the Taranaki region and are not limited to industrial uses within the petroleum industry. Not only are these insights useful but they are also necessary as they provide information relating to the tectonic situation of the region, including faults, flexure and crustal thickening relating to the overarching tectonic regime of the Zealandia continent. Such information is necessary for hazard mitigation and preparation including earthquake, tsunami and volcanic activity as well as providing insights into the past events that occurred in geologic time. The Hearing Panel recognises that a number of submitters are concerned by the potential effects of seismic surveying, primarily in relation to disturbance of marine organisms not addressed by the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> (the 'code of conduct'). To this end, the Hearing Panel suggests a higher level of regulatory control and recommend that seismic surveying be made a controlled activity in all coastal management areas (rather than to prohibit it entirely as requested by the submitter). A Controlled activity rule, with additional standards, terms and conditions, will allow the Council to ensure that adverse effects to significant indigenous biodiversity are addressed appropriately, while still ensuring that those seeking to undertake the activity are appropriately provided for.
Further submissions – Trans-Tasman Resources (6), Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
29 – Department of Conservation	754	Support Retain Rule 12 of the Plan as notified but reconsider rule should a potential whale sanctuary in the Taranaki coastal environment eventuate.	Accept in part Support noted. However, the Hearing Panel notes that Rule 12 is recommended to be split into two rules, a permitted activity for bathymetric testing and an additional rule (Rule 12A) for seismic surveying as a controlled activity.
Further submissions – Climate Justice Taranaki Inc (21)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	The controlled activity classification for seismic testing is recommended so that the Council can ensure that adverse effects on significant indigenous biodiversity are appropriately considered and addressed through a consenting process. At the hearing, the submitter presented in support of this change.
37 – Petroleum Exploration and Production Association of NZ	755	Support	Decline/Grant in kind
		Retain Rule 12 of the Plan as notified.	Support noted. However, the Hearing Panel notes that Rule 12 is recommended to be split into two rules, a permitted activity for bathymetric testing and an additional rule (Rule 12A) for seismic surveying as a controlled activity.
Further submissions – Climate Justice Taranaki Inc (21), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	The controlled activity classification for seismic testing is recommended so that the Council can ensure that adverse effects on significant indigenous biodiversity are appropriately considered and addressed through a consenting process.
Further submissions – Port Taranaki Ltd (32)		Support	In relation to retaining Rule 12 of the Plan as notified, the Hearing Panel therefore recommends declining that part of the relief. However, at the hearing, the submitter subsequently recommended amending Rule 12A (should the Council choose to adopt the Section 42A Report recommendations relating to seismic testing). In particular, the submitter recommended amending the 'gateway' to Rule 12A to refer to the placement of associated monitoring equipment which was provided for in the original wording of Rule 12. The Hearing Panel agrees and recommends that Rule 12A provide for the placement of associated monitoring equipment. In addition, the submitter requested that the standards terms and conditions of Rule 12A be replaced with a requirement that the activity not occur within 1,000 m of mean high water springs. The Hearing Panel recommends declining this relief as it does not address environmental effects outside the 1,000 m restricted area and considers that indigenous biodiversity may potentially be impacted upon if this approach is adopted. It is further suggested that this approach derogates from the precautionary approach as required by Policy 3 of the Plan. Further to this, in relation to Rule 12 as amended [Bathymetric testing] and Rule 12A [Seismic surveying], the submitter requested that subjective conditions relating to significant indigenous biodiversity and taonga species be deleted. The Hearing Panel recommends declining the relief sought noting that as part of a precautionary approach these conditions are considered

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			appropriate and give effect to Policy 11 [Indigenous biological diversity (biodiversity)] of the <i>New Zealand Coastal Policy Statement</i> and other policies of the Plan. The Hearing Panel notes that for certainty, and to assist Plan users, species and habitats identified as significant indigenous biodiversity and taonga species of concern have been included in Schedules 4A, 4B and 4C. The Hearing Panel notes that it is not uncommon for plans to include values based assessments for permitted and controlled activities and that similar conditions are included in the current <i>Coastal Plan for Taranaki</i> and have been successfully implemented and enforced over the life of the Plan.
40 – Te Rūnanga o Ngāti Mutunga	756	Amend Submitter seeks amendment to Rule 12 of the Plan to make seismic surveying or bathymetric testing activity a discretionary activity (rather than a permitted activity). The submitter is concerned about the impacts of seismic surveying on one of their taonga species the korora (little blue penguin).	Accept in part Impacts of seismic testing on marine mammals are managed through the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> (the 'code of conduct'). However, the code only addresses the effects on marine mammals and seabirds (specifically effects on seabirds from on-board lights), the code does not address any effects that may occur to penguins or other 'non mammal' marine fauna. The South Taranaki Bight is an important foraging area for blue penguins of the Marlborough Sounds breeding colony listed in Schedule 4A as "at risk (declining)". Effects from seismic surveying have been shown to significantly affect penguin foraging patterns, which in turn, may adversely affect reproductive output and result in displacement. Any threats to the population would be considered significant. The Hearing Panel does not consider that the permitted activity classification provides the necessary certainty for the Council to ensure adverse effects impacting on marine taxa (not covered by Department of Conservation's code of conduct) are being appropriately managed. The Hearing Panel therefore recommends removing seismic surveying from Rule 12 and creating a new rule (Rule 12A) to make seismic surveying a controlled activity in all coastal management areas. The recommended rule contains additional standards, terms and conditions that address effects on species identified in Schedule 4A, taonga species identified in Schedule 4C as well as requiring the activity to comply with the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> .
Further submissions – Trans-Tasman Resources (6), Petroleum Exploration and Production Association of New Zealand (37)		Oppose

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	757	Amend Submitter seeks amendment to Rule 12 of the Plan to amend Condition (a) to delete reference to: <i>any subsequent applicable Code of Conduct</i> .	Accept The Hearing Panel recommends granting the relief sought by the submitter, noting that this amendment is addressed under Rule 12A.
Further submissions – Trans-Tasman Resources (6)		Neutral	
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
41 – Te Korowai o Ngāruahine Trust	758	Amend Submitter seeks amendment to Rule 12 of the Plan to require a higher level of regulatory control for seismic surveying or bathymetric testing activity (currently a permitted activity).	Accept in part Submitter opposes seismic surveying or bathymetric testing activities on the basis that the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> (the 'code of conduct') is flawed and that, in their view, research evidence clearly cites the harm that is caused to marine mammals, larvae development and zooplankton. The submitter suggests that the marine mammal guidelines do not assess the total effects on the marine environment and do not mitigate the risks to the marine environment. The submitter suggests that the rule's reliance on the guidelines as the basis to afford permitted activity status neglects the impact on fish, larvae and invertebrates and Māori customary and commercial fishing rights. The Hearing Panel recognises that a number of submitters are concerned by the potential effects of seismic surveying and bathymetric testing, primarily in relation to disturbance of marine organisms. While the effects of seismic and bathymetric testing are generally minor and transitory. The Hearing Panel also recognise that there are vulnerable species susceptible to the impacts of seismic surveying that are not addressed in the Department of Conservation's code of conduct. The Hearing Panel therefore recommends amending Rule 12 to require a higher level of regulatory control for seismic surveying but not for bathymetric testing. Bathymetric testing is the more benign of the two activities with adverse effects always likely to be less than minor. However, adverse effects of seismic testing (particularly in relation to indigenous biodiversity) maybe more uncertain. The controlled activity classification is therefore recommended so

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			that the Council can ensure that adverse effects on indigenous biodiversity are appropriately considered and addressed through a consenting process.
41 – Te Korowai o Ngāruahine Trust	759	Amend Submitter seeks amendment to Rule 12 to include a condition that ensures no adverse effects on the cultural interests of sites specified in Schedule 5B.	Grant in kind The Hearing Panel are unaware of any adverse effects likely to result on the sites of significance. Impacts on aquatic life tends to be temporal with fish being able to avoid the area of disturbance and returning once the activity ceases or moves on. Notwithstanding the above, the Hearing Panel notes that, in response to other submitters' requests, seismic surveying is recommended to become a controlled activity under new Rule 12A. It is the view of the Hearing Panel that sites of significance identified in Schedule 5B are unlikely to be affected, however, it is noted that standard, term and condition (c) provides protection for taonga species which includes taonga species identified in significant mahinga kai areas indicated within the planning layers. The Hearing Panel considers that the protection of taonga species within the standards, terms and conditions provides a high level of protection for such areas.
42 – Ngati Rahiri Hapū	760	Amend Submitter questions how an event such as a rahui could be considered when Rule 12 makes no mention of iwi/hapū involvement. Submitter seeks amendment to Rule 12 to make seismic surveying or bathymetric testing activity a controlled activity (rather than a permitted activity) and to include iwi/hapū in the consideration process.	Accept in part The Hearing Panel notes that seismic surveying is recommended to become a Controlled activity under new Rule 12A to address effects on indigenous biodiversity as requested by other submitters. Then Hearing Panel notes that a rahui is not provided for or governed by the RMA (or any other legislation) and is therefore not enforceable through the Plan, however, there may be opportunity to explore these issues further through Mana Whakahono a Rohe agreements in conjunction with the consenting process and the development of more formal relations.
Further submissions – Trans-Tasman Resources (6), Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	761	Amend Submitter seeks amendment to Rule 12 of the Plan to make seismic surveying and bathymetric testing: <ul style="list-style-type: none"> • a discretionary activity in the Open Coast and Port • a non-complying activity in the Outstanding Value, Estuaries Unmodified and Estuaries Modified coastal management areas (rather than a permitted activity). 	Accept in part The submitter believes that seismic testing has adverse effect including significant adverse effects on marine mammals and fish species. In addition, it is their view that a permitted activity classification would not enable the Council to give effect to the <i>New Zealand Coastal Policy Statement</i> . Further, the 2013 standards are inadequate and have been under review since 2015 and cannot be relied on to ensure the Council gives effect to the <i>New Zealand Coastal Policy Statement</i> . The submitter suggests that the Council will need to consider expert advice on the generation of noise and vibration on marine species. It is noted that the submitter presented on this further at the hearing of submissions and amended their original position to seek restricted discretionary and non-complying activity classifications. The Hearing Panel recognises that a number of submitters are concerned by the potential effects of seismic surveying, primarily in relation to disturbance of marine organisms not identified in the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> (the 'code of conduct'). To this end the Hearing Panel considers it is necessary to increase the activity classification for seismic surveying to a controlled activity in all coastal management areas (rather than restricted discretionary, or discretionary and non-complying as requested by the submitter). A controlled activity pathway, with additional standards, terms and conditions, will allow the Council to ensure that adverse effects to indigenous biodiversity are addressed appropriately, while still ensuring that those seeking to undertake the activity are appropriately provided for. The recommended amendments, including additional standards, terms and conditions, as well as matters of control, are included in new Rule 12A.

Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
58 – Te Atiawa	767	Amend Submitter is concerned that noise and vibration associated with seismic surveying and bathymetric testing may result in adverse impacts on taonga species such as kororā (little blue penguin) and tohorā (whales). Submitter seeks amendment to Rule 12 by changing the activity classification to discretionary activity (currently a permitted activity) to provide iwi the opportunity to be involved in the decision making process and ensure conditions of consent are monitored. AND Add a further condition to ensure no adverse effects on cultural values associated with sites identified in Schedules 5A and 5B.	Accept in part Impacts of marine mammals are managed through the Department of Conservation's <i>Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations 2013</i> (the 'code of conduct'). However, the code only addresses the effects on marine mammals and seabirds (specifically effects on seabirds from on board lights), the code does not address any effects that may occur to penguins or other 'non mammal' marine fauna. The South Taranaki Bight is an important foraging area for blue penguins that nest along the Taranaki coastline as well as for the Marlborough Sounds blue penguin breeding colony. Blue penguins are listed in Schedule 4A as "at risk (declining)" and any threats to the population considered significant. Effects from seismic surveying have been shown to significantly affect penguin foraging patterns which may adversely affect reproductive output and result in displacement. The Hearing Panel does not consider that the permitted activity classification allows the Council to monitor and effectively address potential adverse effects on marine taxa not covered by Department of Conservation's code of conduct.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>life of the Plan and allows unforeseen activity types to be considered as part of a consenting regime. It is not feasible to identify contaminant types but would potentially cover discharges from larger industrial premises (so long as they do not trigger other rules, e.g. wastewater rules).</p> <p>Of note, together Rules 13 and 14 provide a much higher level of protection than otherwise provided by the RMA, where, in the absence of a rule, a resource consent is required (as a discretionary activity). Discharges to Outstanding Value, Estuaries Unmodified and Estuaries Modified coastal management areas are a non-complying activity pursuant to Rule 14.</p>
21 – Climate Justice Taranaki	775	<p>Amend</p> <p>Submitter questions compliance and enforcement responses and seeks that if such 'catch-all' rules are to remain, then Rule 13 of the Plan for the relevant discharge activities should be Publicly Notified.</p>	<p>No relief necessary</p> <p>The Hearing Panel does not consider it appropriate to include this level of operational detail in the Plan but notes that in accordance with its standard operating procedures, such discharge activities are already publicly notified. The Hearing Panel notes that the Council is consistently identified in the National Monitoring System, and elsewhere, as having very strong and best practice compliance and enforcement responses.</p>
33 – New Zealand Defence Force	776	<p>Amend</p> <p>Submitter seeks amendment to Rules 13 and 14 of the Plan by inserting a new rule permitting minor discharges (similar to Rule 53 regarding minor disturbance and removal), which would provide for the operation of the portable water units; OR inserting a new rule specifically permitting discharges from the operation of portable water treatment units, such as: <u><i>the discharge of contaminants or water to the coastal marine area from portable water treatment units for the purpose of temporary military training activities is a permitted activity.</i></u></p>	<p>Grant in kind</p> <p>The submitter notes that New Zealand Defence Force training within the coastal environment can involve the use of portable water treatment units and it is important that personnel are fully trained in the use of these units. Minor discharges to the coastal marine area associated with these types of activities should have little effect on coastal water quality. For example, tidal wave action in the coastal marine area will rapidly disperse the discharges and will generally result in no noticeable difference in water quality within a few metres of the discharge point.</p> <p>The Hearing Panel believes there is merit in these and other similar type discharge activities being provided for as a permitted activity rule. Other discharges of this nature could include cooling water use on vessels or discharges from waterblasting activities (note that abrasive blasting is separately addressed in Rule 11).</p> <p>The Hearing Panel recommends granting the relief sought in kind by including a new rule, Rule 1A, that allows, as a permitted activity, the temporary discharge of water (and minor incidental contaminants, e.g. salt associated with concentrated seawater from a desalination process) into the coastal</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>marine area. This would be the equivalent of a rule in the current Freshwater Plan and is consistent with approaches adopted by other regional councils.</p> <p><u>Activity description</u></p> <p><u>Temporary discharge of water and minor contaminants on the foreshore, seabed or into waters of the coastal marine area and any associated disturbance of the foreshore or seabed.</u></p> <p><u>Standards, terms and conditions</u></p> <p><u>(a) The activity does not cause any scouring or erosion beyond the point of discharge;</u></p> <p><u>(b) after reasonable mixing the activity does not cause:</u></p> <p><u>(i) any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;</u></p> <p><u>(ii) any conspicuous change of colour or visual clarity;</u></p> <p><u>(iii) any emission of objectionable odour;</u></p> <p><u>(iv) any significant change to salinity;</u></p> <p><u>(v) any change in the temperature of the receiving environment by more than 3° C; or</u></p> <p><u>(iv) any significant change to the turbidity;</u></p> <p><u>(c) the activity does not have an adverse effect on significant indigenous biodiversity, including those identified in Schedule 4 [Significant indigenous biodiversity];</u></p> <p><u>(d) the activity does not have a significant adverse effect on the values associated with taonga species identified in Schedule 4C [Taonga species];</u></p> <p><u>(e) the activity does not have a significant adverse effect on aquatic life; and</u></p> <p><u>(f) the activity does not exceed 31 days or part days during any 12 month period.</u></p>
44 – Nga Motu Marine Reserve Society Inc	777	<p>Amend</p> <p>Submitter seeks amendment to Rules 13 and 14 to require a higher level of regulatory control and prohibit seismic surveying or bathymetric testing activity (currently a discretionary activity in the Open Coast and Port and a non-complying activity in the other coastal management areas).</p>	<p>Decline</p> <p>Refer to submission point 760 in relation to the Hearing Panel's response on prohibiting seismic surveying or bathymetric testing activities.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>In relation to amending Rules 13 and 14 to provide a higher level of regulatory control, the Hearing Panel notes that the rules are already very restrictive.</p> <p>The Hearing Panel notes that the intent of Rules 13 and 14 is to provide a consenting pathway for discharge activities that do not come within or comply with other rules in the Plan. It acknowledges that regional plans will rarely be able to predict all foreseeable and unforeseeable activities that might occur over the life of the Plan and allows unforeseen activity types to be considered as part of a consenting regime. It is not feasible to identify contaminant types but would potentially cover discharges from industrial premises (so long as they do not trigger other rules, e.g. wastewater rules).</p> <p>Of note, together Rules 13 and 14 provide a much higher level of protection than otherwise provided by the RMA, where, in the absence of a rule, a resource consent is required (as a discretionary activity). Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 15 – Storage or transfer of cargo materials within the Port air zone			
32 – Port Taranaki	781	<p>Amend</p> <p>Submitter seeks amendment to Rule 15 of the Plan to:</p> <ul style="list-style-type: none"> read: <i>Storage and transfer of cargo materials within the Port Air Zone involving discharge of contaminants to air <u>and water</u>.</i> amend the standard/terms/conditions to refer to discharges to water as per G2.11 of the operative Plan. <p>OR</p> <p>Provide an exception for contaminant discharges from storage and transfer of animal feed cargo to water from storage and transfer to/from ships to wharves (such a rule could be placed before Rule 13).</p>	<p>Accept</p> <p>The submitter recognises that Rule 15 provides for the discharge to air of contaminants from the storage and transfer of cargo within the Port Air Zone as a permitted activity and includes dust discharges to air from products such as animal feed that is transferred from ships via ship cranes to the wharves. The operative Coastal Plan provides for the discharge of this product in the same circumstances to air and water via the General Rule G2.11(a). This rule has not been translated across to the Proposed Coastal Plan. It is considered that the effect on the environment from the discharge of contaminants from the storage and transfer of animal feed cargo to air and water in the Port Air Zone is minimal and is essentially fish food.</p> <p>The Hearing Panel recommends granting the relief sought by amending the Activity Description of Rule 15 to read as follows:</p> <p><i><u>Discharge of contaminants to air and water during the storage or transfer of cargo materials within the Port Air Zone that does not come within or comply with Rule 15.</u></i></p> <p>The Hearing Panel further recommends consequential amendments to broaden the scope of the rule to include water discharges and to include additional conditions specific to water discharges. These include conditions on effects on aquatic life, and water quality after reasonable mixing.</p>
Rule 16 – Storage or transfer of cargo materials within the Port air zone			
32 – Port Taranaki	782	<p>Amend</p> <p>Submitter seeks amendment to Rule 16 of the Plan to:</p> <ul style="list-style-type: none"> read: <i>Storage and transfer of cargo materials within the Port Air Zone involving discharge of contaminants to air <u>and water</u> that does not come within or comply with Rule 15.</i> amend the standard/terms/conditions to refer to discharges to water as per G2.11 of the operative Plan. <p>OR</p>	<p>Accept</p> <p>For the same reasons outlined in the submitter's requested relief for Rule 15, the submitter is seeking an equivalent change in Rule 16.</p> <p>The Hearing Panel recommends granting the relief sought by amending the Activity Description of Rule 15 to read as follows:</p> <p><i><u>Discharge of contaminants to air and water during the storage or transfer of cargo materials within the Port Air Zone that does not come within or comply with Rule 15.</u></i></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		Provide an exception for contaminant discharges from storage and transfer of animal feed cargo to water from storage and transfer to/from ships to wharves (such a rule could be placed before Rule 13).	
Rule 17 – Other discharges to air			
37 – Petroleum Exploration and Production Association of NZ	783	Amend	Decline
		<p>Support treating flaring as a discretionary activity but seek that it be amended or a new rule be included that allows miscellaneous air emissions that have less than minor effects as a permitted activity.</p> <p>Submitter highlights such a rule provided in the Greater Wellington Regional Coastal Plan that reads as follows:</p> <p><i>“The venting of draignage systems, not including the venting of trade wastes or sewage conveyance systems, is a permitted activity provided that the discharge complies with the conditions specified below.</i></p> <p><i>Conditions</i></p> <p><i>(1) The discharge shall not result in odour, gas, vapour or aerosols which are noxious, dangerous, offensive or objectionable to other users of the coastal marine area or adjoining land users as a result of its frequency, intensity or duration.”</i></p> <p>In addition, the submitter points out that the definition of “industrial trade premises” is vague and could include many things. One interpretation could even stretch as far as to include vessels, as they are typically “used for industrial trade purposes”.</p>	<p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>The Hearing Panel suggests these activities would be canvassed and addressed as part of the consenting process for other discharges into the coastal marine area.</p> <p>The Hearing Panel are not aware of any currently existing activities that would be affected by this rule.</p> <p>The Hearing Panel also notes that discharges from vessles are already addressed under the <i>Resource Management (Marine Pollution Regulations) 1998</i> and should not be addressed under this rule.</p>

Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements.</p> <p>In relation to notification requirements, the submitter (and others) have highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting reference to notification requirements in the Rule (noting that relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>

Rule 18 – Outfall structure placement			
21 – Climate Justice Taranaki	786	<p>Amend</p> <p>Submitter opposes permitting the placement of outfall structures in the coastal marine area and seek that such activities be prohibited or non-complying activities in coastal management areas: Outstanding Value and Estuaries Unmodified, and Discretionary in the other areas.</p>	<p>Decline</p> <p>The submitter contends that without a resource consent it is impossible to know whether the standards, terms and conditions are met.</p> <p>The Hearing Panel notes that this rule is specific to managing the effects of a structure rather than the effects of a discharge. The placement of such</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>structures generally has less than minor effects and (as for any permitted activity) is still subject to compliance with standards, terms and conditions. The discharge of stormwater and wastewater is addressed by other rules.</p> <p>In relation to the management of small outfall <u>structures</u>, the Hearing Panel notes that the rule includes a notification requirement so that the Council can monitor the activity if need be.</p> <p>Notwithstanding the above, the Council operates a process where any member of the public is able to notify the Council of a suspected breach of compliance. Elevating the activity classification and requiring a resource consent would not be cost or time efficient and the Hearing Panel does not believe the risks of the activity are sufficient to warrant this.</p>
29 – Department of Conservation	787	Amend Submitter seeks amendment to Rule 18 of the Plan to exclude its application to Outstanding Value and Estuaries Unmodified coastal management areas.	Decline The Hearing Panel recommends declining the relief sought as being unnecessarily restrictive.
Further submissions – Climate Justice Taranaki Inc (21), Royal Forest and Bird Protection Society (43), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>The Hearing Panel notes that this rule is specific to managing the effects of a structure rather than the effects of a discharge. The placement of such structures generally has less than minor effects and (as for any permitted activity) is still subject to compliance with standards, terms and conditions. The discharge of stormwater and wastewater is addressed by other rules.</p>
32 – Port Taranaki	788	Amend Submitter seeks amendment to Rule 18(a) of the Plan to read: <i>(a) structure has a maximum internal diameter of 450300mm and extends a maximum of 0.5m seaward of the line of mean high water springs; [...]</i>	Accept The submitter considers the maximum outfall diameter threshold is unreasonably low and seeks amendment to Rule 18(a). The submitter noted, in pre-hearing engagement that the current Plan allowed an internal diameter of 600mm. The Hearing Panel agrees with the views of the submitter and suggest that the environmental effects of the placement of small (i.e. less than 300mm diameter) outfall structures can be adequately addressed through the standards, terms and conditions of the permitted activity rule. The Hearing Panel notes that the discharge itself will be addressed under different rules. The Hearing Panel therefore recommends amending Rule 18 as requested by the submitter.
	789	Amend	Decline

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga		<p>Submitter has concerns regarding the complexity of this permitted activity and feel that this activity may be better managed as a discretionary or controlled activity to ensure that the associated conditions are fully understood and can be monitored by the Council. With regards to contacting the Council before the commencement of the activity, the submitter is unsure what the process would be should the activity be found to be non-compliant with the conditions. The submitter feels that this issue would be better managed and monitored through the consent process which provides for longer timelines and means that hapū/iwi can be involved in the decision making process and subsequent monitoring if appropriate.</p> <p>Submitter opposes allowing the placement of outfall structures in the coastal marine area as a permitted activity and seek that such activities be a discretionary activity.</p>	<p>The Hearing Panel notes that Rule 18 is specific to managing the effects of a structure rather than the effects of a discharge. The discharge of stormwater and wastewater is addressed by other rules.</p> <p>In relation to the management of small outfall structures, the Hearing Panel notes that the rule includes a notification requirement so that the Council can monitor the activity if need be. Notwithstanding the above, the Council operates a process where any member of the public is able to notify the Council of a suspected breach of compliance. Elevating the activity classification will not be cost or time efficient and the Hearing Panel does not believe the risks are sufficient to warrant this.</p> <p>The Hearing Panel does not consider it appropriate to require a consent to place small outfall structure. This activity is considered fairly standard and routine with any adverse effects generally being temporary and minor. The Council has not encountered significant issues with the placement as governed by the current Plan and therefore the Panel does not consider it appropriate or necessary to require all outfall structures to be a discretionary activity.</p>

41 – Te Korowai o Ngāruahine Trust	790	<p>Amend</p> <p>Submitter supports the inclusion of Condition (e) in Rule 18 of the Plan addressing historic heritage but seek further dialogue on how adverse effects will be considered in practice. If agreement cannot be reached amend Rule 18 to make this rule a discretionary activity (rather than permitted activity).</p>	<p>No relief necessary</p> <p>The Hearing Panel notes that Rule 18 is specific to managing the effects associated with the placement of a structure rather than the effects of a discharge. The discharge of stormwater and wastewater is addressed by other rules.</p> <p>The submitter further presented on this</p>
Further submissions – Climate Justice Taranaki Inc (21), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
42 – Ngati Rahiri Hapū	791	<p>Amend</p> <p>Submitter does not accept that structures may be placed over kaimoana reefs as a permitted activity without iwi/hapū consideration notwithstanding the standards, terms and conditions that are in place.</p> <p>Submitter seeks amendment to Rule 18 of the Plan to make outfall structure placement a discretionary activity or at least a controlled activity (rather than a permitted activity)</p> <p>AND</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought noting that concerns relating to potential impacts are already addressed in the standards, terms and conditions. In particular, Condition (e) would restrict the activity from occurring in areas identified as significant under Schedule 5A and B including nearshore reefs identified as having kai moana values.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		that there be iwi/hapū consultation in all cases.	<p>The Hearing Panel further notes that this rule is specific to managing the effects of a structure rather than the effects of a discharge. Discharges of stormwater and wastewater are separately addressed by other rules.</p> <p>In relation to the management of small outfall structures, the Hearing Panel notes that this activity is considered fairly standard and routine with any adverse effects generally being temporary and less than minor. The standards, terms and conditions require that the Council be notified of the instalment of the structure which would subsequently be notified to iwi authorities. This notification process allows the Council to be aware of the exact location of such structures and to follow up, if necessary, with any concerns or issues that may arise.</p>
Further submissions – Climate Justice Taranaki Inc (21), Te Korowai o Ngāruahine Trust (41), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
43 – Royal Forest and Bird Protection Society	792	<p>Amend</p> <p>Submitter is concerned that the conditions of Rule 18 do not manage cumulative effects. Of particular concern are areas of Outstanding Value where structures can have adverse effects on natural character and natural features and landscapes.</p> <p>Submitter seeks amendment to Rule 18 of the Plan to:</p> <ul style="list-style-type: none"> • identify sites/areas of significant indigenous biodiversity and include a condition that the structure is not within those areas • amend Condition (c) by adding: activity, and no more than 1m width of surface area is distributed • add a <i>Note: this rule does not authorise a discharge from the outfall structure.</i> 	<p>Accept in Part</p> <p>The Hearing Panel acknowledges the submitter's concerns relating to cumulative effects. It is the experience of the Council that the majority of any effects that occur as a result of placement of small outfall structures are transitory and less than minor. Such activities are considered routine and result in minimal disturbance. To date, the Council has not experienced any issues arising from the cumulative effects of placing an outfall structure.</p> <p>The Hearing Panel believes that the submitter's request to identify sites/areas of significant indigenous biodiversity is unnecessary and infers that the placement of outfall structures and the presence of significant indigenous biodiversity are mutually exclusive. The Hearing Panel does not agree with this view. Notwithstanding that, the Hearing Panel notes that Condition (f) provides a high level of protection to significant indigenous biodiversity as already identified in Schedule 4. If this is an issue of mapping (which has been raised by the submitter previously), the submitter is referred to Hearing Panel's previous comments on the difficulties and limitations of mapping habitats of significant indigenous biodiversity in the coastal marine area.</p> <p>The Hearing Panel further notes that the <u>placement</u> of small outfall structures is a fairly routine activity that has not, in the experience of the Council, resulted in noticeable adverse effects on the high natural character associated with Outstanding Value and Estuaries Unmodified coastal management areas.</p> <p>The Hearing Panel does not consider the requested addition to Condition (c) necessary.</p>
Further submissions – Climate Justice Taranaki Inc (21)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>The Hearing Panel agrees to include the requested note as it provides useful guidance for Plan users with minor amendment to read:</p> <p><u>Note: this rule does not authorise a discharge from the outfall structure. The discharge rules are Rules 1A to 3 and 5 to 8.</u></p>
58 – Te Atiawa	793	<p>Amend</p> <p>Submitter seeks amendment to Rule 18 of the Plan by including in the standards, terms and conditions a clause that refers to Schedules 5A and 5B</p> <p>AND</p> <p>amend the activity classification to a controlled activity (rather than a permitted activity).</p>	<p>Accept in part</p> <p>The submitter supports the inclusion of Schedule 5A and 5B of the Plan, however, is uncertain as to how the Council will ensure that these requirements are being met.</p> <p>The placement of small outfall structures is a fairly routine activity that has not, in the experience of the Council, resulted in noticeable adverse effects. The Hearing Panel is therefore confident that the permitted activity classification is reasonable for this activity. The Council requires notification prior to the commencement of the activity and will maintain a record of all outfall structures placed, this allows for routine check-ups. The Council has additional measures in place to deal with any non-compliance issues that may arise and operates a public notification system that allows any member of public to notify the Council of non-compliance. If non-compliance is recognised the Council will take swift and appropriate enforcement action and the activity will require a consent to continue operation where all non-compliance issues will be dealt with accordingly.</p> <p>Notwithstanding the above, the Hearing Panel notes that Rule 18 only covers the placement of a small outfall structure, not the discharge. Any discharge will be governed by the appropriate rule depending on the content of the discharge, and likely invoke the consenting process as a result.</p> <p>The Hearing Panel recommends amending reference to Schedule 5 to be Schedules 5A and 5B as requested by the submitter.</p>

61 – Te Rūnanga o Ngāti Ruanui Trust	794	<p>Amend</p> <p>Submitter seeks amendment to Rule 18 of the Plan to include new and amended standard, term and condition to read:</p> <p>[...]</p> <p>(e) <u>the discharge is not placed placement of the structure does not have an adverse effect on the values associated with within cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage];</u></p>	<p>Accept in part</p> <p>The Hearing Panel notes that Rule 18 is specific to managing the effects associated with the placement of a structure rather than the effects of a discharge. The discharge of stormwater and wastewater is addressed by other rules.</p> <p>In relation to the management of small outfall structures, the Hearing Panel is concerned that the effect of the new and amended conditions would make the</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(f) the structure is not placed at any site identified in Schedule 5B [Sites of significance to Māori and associated values] and Appendix 2:</u></p> <p><u>(g) structure does not have adverse effect on Schedules 1 and 2</u></p> <p><u>(h) placement of the structure does not have an adverse effect the structure is not placed at any site with any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat] [...]</u></p>	<p>rule unnecessarily restrictive and by default redundant in that they preclude the placement of these small outfall structures in any part of the Taranaki coastal marine area.</p> <p>The Hearing Panel does not consider it appropriate to require a consent to place a small outfall structure. This activity is considered fairly standard and routine with any adverse effects generally being temporary and having less than minor effects. Specific comments on the new and amended proposed conditions are as follows:</p>
Further submissions – Climate Justice Taranaki Inc (21), Te Korowai o Ngāruahine Trust (41)		Support	<ul style="list-style-type: none"> The Hearing Panel notes that this Rule does not deal with the discharge of the structure, only the placement. Discharge impacts would be more appropriately addressed through the appropriate discharge rule. The Hearing Panel recommends amending the Rule to include a guidance note to clarify that rule relationship between the placement of outfall structures and discharges. The submitter proposes to include a new Condition (f), however, the reference to sites of significance to Māori located in Schedule 5B has already been included within Condition (e) and it is not necessary to repeat. Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. The condition effectively precludes the placement of small outfall structures in any part of the coastal marine area thereby making the rule redundant. In regards to requested Condition (h), the Hearing Panel does not believe that it is necessary to prohibit the location of outfall structures due to the presence of threatened or at risk, or regionally distinctive species. As long as any negative effects towards these species are managed then there is no reason why the structure should not be placed. It is the opinion of the Hearing Panel that, if well regulated and managed, the two can co-exist without any adverse effects to either. Notwithstanding that, the Hearing Panel recommends amending Condition (f) to expand its scope to include reference to scheduled taonga species.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Rule 18A – Outfall structure placement			
29 – Department of Conservation	795	Amend Submitter seeks amendment to the Plan to include a new controlled activity rule that specifically addresses outfall structure placement in Outstanding Value and Estuaries Unmodified coastal management areas. The submitter further seeks that Conditions (a), (b), (c), and (d) of Rule 18 should also be conditions for this new rule and that the matters of control should, at a minimum, address any effects on natural character, significant species, historic heritage, and any mitigation of effects on these values.	Decline The Hearing Panel recommends declining the relief sought. Refer to submission point 785.
Rule 19 – Mooring structure placement in the Port			
43 – Royal Forest and Bird Protection Society	796	Amend Submitter seeks amendment to the Activity Description of Rule 19 of the Plan to delete the activity provisions for associate disturbance, deposition and discharge.	Decline The disturbance, deposition and discharge activities referred to in the Activity Description of Rule 19 are incidental to the activity of placing mooring structures in the Port. The Hearing Panel recognises that a small amount of disturbance and deposition is likely to be an inevitable consequence of any work on the foreshore and seabed but the effects will be less than minor and transitory. The Rule therefore seeks to bundle associated activities given that the effects are considered minor, temporary and low risk to the environment.
43 – Royal Forest and Bird Protection Society	797	Amend Submitter seeks amendment to Rule 19 of the Plan to make mooring structure placement in the Port (and not requiring excavation of the seafloor or seabed) a controlled activity (rather than a permitted activity).	Decline The submitter does not believe that the effects with difference scale of mooring structures and cumulative effects are adequately managed through a permitted activity rule. The submitter wishes this activity to be a controlled activity so that the Council can assess whether the conditions are met. As previously noted, the Port is a highly modified area and mooring structures are considered common place for such a location. The Hearing Panel believes that placement of mooring structures in a port is fairly standard and routine and will produce less than minor effects if there are any effects at all. Requiring such activities to get a resource consent is both unnecessary and restrictive noting that the Port is regionally important infrastructure. Possible effects on indigenous biodiversity and historic heritage values in the vicinity are acknowledged and addressed in Conditions (c) and (d). If the activity

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			cannot appropriately comply with those conditions, a resource consent would be required.
43 – Royal Forest and Bird Protection Society	798	Amend	No relief necessary
		The Port is adjacent to an outstanding landscape and character area, therefore, the submitter seeks amendment to Rule 19 of the Plan to add a condition that the mooring structure does not have an effect on Outstanding Value areas.	The Hearing Panel note that the Port is already a highly modified environment that is located adjacent to an area of Outstanding Value. Both areas co-exist and the placement of any additional mooring structures will not impact on the natural character of the Sugar Loaf Islands as the activity will be confined to the Port coastal management area within the breakwaters.
43 – Royal Forest and Bird Protection Society	799	Amend	No relief necessary
		Submitter seeks amendment to Rule 19 of the Plan to add a condition that the mooring structure must not have adverse effects on the values of scheduled sites and areas in the coastal marine area with significant indigenous biodiversity values.	The Hearing Panel notes that this relief is already provided for under Condition (f), which states that the placement of the mooring structure must not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4 [Significant species and ecosystems].
58 – Te Atiawa	800	Support	Accept
		Retain Rule 19 of the Plan as notified.	Support noted. Rule 19 is retained subject to minor amendments as requested by other submitters that do not change the rule's scope.
Further submissions – Port Taranaki Ltd (32)		Support	
NEW Rule 19A – Mooring structure placement in the Port			
43 – Royal Forest and Bird Protection Society	801	Amend	Accept in part
		Submitter seeks amendment to the Plan to include a new rule for mooring structure placement in the Port that cannot comply with Rule 19 as a Restricted Discretionary (or discretionary activity) and include a matter of discretion to consider the effects on indigenous biodiversity values.	The Hearing Panel refers the submitter to Rules 23 and 33 which are the catch-all rule for mooring structures not meeting the activity description or all the standards, terms and conditions. Rule 23 is a controlled activity rule for the Port and the Hearing Panel notes that control is reserved over ecological values as directed in Condition (f). Rule 33 is a discretionary activity for any structure erection or placement that does not come within or comply with previous relevant rules.
Further submissions – Port Taranaki Ltd (32)		Oppose	The Hearing Panel recognises that the term “ecological effects” is meant to cover the protection of indigenous biodiversity. The Hearing Panel

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			recommends replacing the term "ecological values" with "indigenous biodiversity" to clarify that intent.
Rule 20 – Mooring structure placement			
6 – Trans-Tasman Resources Ltd	802	Support	Accept
		Retain Rule 20 as this rule recognises that some monitoring and sampling activities will be requiring mooring structures, and appropriately provides for them as a permitted activity.	Support noted. Rule 20 is retained subject to minor amendments as requested by other submitters that do not change the rule's scope.
29 – Department of Conservation	803	Support	Accept
		The Department of Conservation often uses monitoring moorings in the coastal environment during its operations and supports the permitted classification of mooring structure placement for monitoring or sampling equipment. Retain Rule 20 as notified.	Support noted. Rule 20 is retained subject to minor amendments as requested by other submitters that do not change the rule's scope.
Further submissions – Port Taranaki Ltd (32)		Support	
40 – Te Rūnanga o Ngāti Mutunga	804	Amend	Decline
		Submitter is opposed to permitting the mooring structures in the coastal marine area for monitoring and sampling purposes and seek that such activities be a discretionary activity.	The submitter has concerns regarding the complexity of this permitted activity rule and feel that this activity may be better managed as a discretionary activity or controlled activity to ensure that the associated conditions are fully understood and can be monitored by the Council. With regards to contacting the Council before the commencement of the activity, the submitter is unsure what the process would be should the activity be found to be non-compliant with the conditions. The submitter feels that this issue would be better managed and monitored through the consent process which provides for longer timelines and means that hapū/iwi can be involved in the decision making process and subsequent monitoring if appropriate.
Further submissions – Trans-Tasman Resources (6)		Oppose	The Hearing Panel notes that the placement of mooring structures is fairly routine and uncomplicated producing less than minor, if any, adverse effects. Due to the straight forward nature of the activity and the low impact that it has, the Hearing Panel does not believe that this activity requires further monitoring or the need to impose unnecessary restrictions and costs on people to obtain a resource consent.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Notwithstanding the above, the Hearing Panel are aware that iwi/hapū will be interested to know when such activities are being undertaken and note that the Council has an arrangement with iwi authorities who have requested to be informed of this activity as cited in the activity description.</p> <p>The Hearing Panel notes that if an activity is to be commenced in a location that is not considered appropriate after having regard to the standards, terms and conditions listed, the Council will advise those undertaking the activity that a resource consent is required under Rules 33 (discretionary) or 34 (non-complying) depending on the coastal management area. If any issues of non-compliance arise the Council will take swift and appropriate enforcement action.</p>
41 – Te Korowai o Ngāruahine Trust	805	<p>Amend</p> <p>Submitter supports the inclusion of Condition (b) addressing historic heritage but seek further dialogue on how adverse effects will be considered in practice. If agreement cannot be reached, submitter seeks amendment to Rule 20 of the Plan to make this rule a discretionary activity (rather than permitted activity).</p>	<p>No relief necessary</p> <p>The Hearing Panel notes that the purpose of Rule 20 is to allow the use of moorings in the coastal marine area for monitoring or sampling purposes. Effects are generally less than minor. However, standards, terms and conditions do apply to ensure that in the event that an activity must avoid, remedy or mitigate potential adverse effects on historic heritage or indigenous biodiversity values.</p> <p>The Hearing Panel notes that if an activity is to be commenced in a location that is not considered appropriate, the Council will advise those undertaking the activity that a resource consent is required under Rules 33 (Discretionary) or 34 (non-complying) depending on the coastal management area.</p>
42 – Ngati Rahiri Hapū	806	<p>Amend</p> <p>Submitter cannot accept that structures may be placed on or over kaimoana reefs as a permitted activity without iwi/hapū consideration notwithstanding the standards, terms and conditions that are in place.</p> <p>Submitter seeks amendment to Rule 20 of the Plan to make mooring structure placement a Discretionary or at least a controlled activity (rather than a permitted activity)</p> <p>AND</p> <p>that there be iwi/hapū consultation in all cases.</p>	<p>Decline</p> <p>The submitter is seeking a high level of protection for their reefs. At the hearing, the submitter presented further on this issue. While generally acknowledging that the Plan policies and the standards, terms and conditions of rules may provide for this high level of protection, nevertheless it is the submitter's view that the placement of mooring structure on or over their kaimoana reefs must be regulated as a discretionary or at least a controlled activity (rather than a permitted activity).</p> <p>In relation to the management of the activity itself, the Hearing Panel notes that the placement of small mooring structures associated with monitoring and sampling equipment (and which does not involve any mechanical excavation) is a fairly standard and routine activity with any adverse effects generally</p>
Further submissions – Trans-Tasman Resources (6)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>being temporary and less than minor. For example, the mooring structure and the monitoring or sampling equipment must not occupy an area exceeding 5 m² of the coastal marine area.</p> <p>The Hearing Panel acknowledges the concerns of the submitter and notes that Conditions (a), (b) and (c) would generally restrict the activity from occurring in areas identified as significant under Schedule 4 [Significant indigenous biodiversity], Schedule 4C [Taonga species] and Schedule 5A and B [Historic heritage]. Nearshore reefs are identified in Policy 14(b) as sites of significant indigenous biodiversity. Nearshore reefs may also be a site of significance to Māori in relation to historic heritage. Of note, virtually the entire coastal length of the submitter's rohe is identified in the Plan and associated coastal maps as having kaimoana values.</p> <p>As part of a precautionary approach, the standards, terms and conditions require that the Council be notified of the instalment of any mooring structure. This notification process allows the Council to be aware of the exact location of such structures and to follow up, if necessary, with any concerns or issues that may arise. The Hearing Panel notes that the Council has further agreed that upon notification it will notify the relevant iwi authority of the activity occurring in their rohe.</p> <p>The Hearing Panel further notes that if an activity cannot comply with all the standards, terms and conditions listed, the Council will advise those undertaking the activity that a resource consent is required under Rules 33 (discretionary) or 34 (non-complying) depending on the coastal management area.</p>
43 – Royal Forest and Bird Protection Society	807	<p>Amend</p> <p>Submitter seeks amendment of the heading for Rule 20 of the Plan by adding the word “<i>monitoring</i>”.</p>	<p>Decline</p> <p>The Hearing Panel sees no need to include a specific heading for Rule 20. The Plan headings deliberately bundles main activities at a high level to capture a suite of rules.</p>
43 – Royal Forest and Bird Protection Society	808	<p>Amend</p> <p>Submitter supports the permitted rule for monitoring and sampling purposes where they are not fixed to the seabed, provided there are no adverse effects on biodiversity values or outstanding character and landscape values. However, the provisions for associated disturbance, deposition and discharge are uncertain and</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel does not consider it necessary to remove the reference to associated disturbance, deposition or discharge as covered by activity descriptions (b), (c) and (d).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>could result in adverse effects that are not addressed by the permitted standards, terms and conditions.</p> <p>Submitter seeks amendment to Rule 20 of the Plan by deleting the Activity provisions for associate disturbance, deposition and discharge.</p>	<p>The Hearing Panel notes that the disturbance, deposition and discharges referred to in the Activity Description of Rule 20 are those incidental to the placement of mooring structures.</p> <p>The Rule recognises that, during the installment of mooring monitoring structures, there may be minor and transitory disturbances as a result. The impacts are generally very minor with the associated effects being similar in kind and magnitude to that associated with a vessel dropping anchor. The Rule therefore seeks to bundle associated activities given they are low risk and likely to produce no or, at the most, less than minor effects (i.e. the receiving environment can generally handle the activity with effects being naturally and promptly remedied without the need for further intervention).</p>
43 – Royal Forest and Bird Protection Society	809	<p>Amend</p> <p>Submitter seeks amendment of Rule 20 of the Plan by adding to the Activity Description as follows:</p> <p><u>The placement or removal of a mooring structure placement for monitoring [...]</u></p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. Rule 20 specifically relates to the placement of the structure. Removal of structures is separately addressed under Rules 44, 45 and 46.</p> <p>The Hearing Panel notes the reference to “removal” within Condition (a) of Rule 20 relates to the information requirements to be supplied by the person(s) undertaking the activity. While this is additional information that does not fall within the scope of the Rule gateway, nevertheless it has been included for the reader for certainty and clarity purposes as the information would be required under Rule 44 anyway and ensures Council has all the necessary information for an activity that is generally a short term activity.</p>
43 – Royal Forest and Bird Protection Society	810	<p>Amend</p> <p>Submitter seeks amendment to the standards, terms and conditions to ensure the activity will not occur where it would have adverse effects on values and characteristics to be protected under Policies 8 [Outstanding value], 9 [Natural character] and 14 [Significant indigenous biodiversity] of the Plan.</p>	<p>Decline</p> <p>The Hearing Panel notes that in the development of Plan provisions, consideration has been had to the type and scale of the activity and the associated effects. The Hearing Panel is satisfied that mooring monitoring structures are unlikely to have more than minor adverse effects on outstanding natural character, features and landscapes, natural character and significant indigenous biodiversity values in the coastal environment. Certainly not at a landscape scale (i.e. the mooring structure and the monitoring or sampling equipment must not occupy an area exceeding 5 m² of the coastal marine area). Notwithstanding that, Council recognises that in specific localities unforeseen impacts on significant indigenous biodiversity may occur. Accordingly Condition (c) in Rule 20 applies to protect any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			type including those identified in Schedule 4 [Significant species and ecosystems] from unforeseeable impacts.
58 – Te Atiawa	811	<p>Amend</p> <p>Submitter supports the inclusion of Schedule 5 and 4A. However, they are uncertain as to how the Council will ensure that these requirements are being met. The submitter requests dialogue to explain how this will be achieved or request that the activity classification is elevated to a controlled activity.</p> <p>Submitter seeks amendment to Rule 20 of the Plan by including a condition that refers to Schedules 5A and 5B</p> <p>OR</p> <p>amend the activity classification to a controlled activity (rather than a permitted activity).</p>	<p>Accept in part</p> <p>The Hearing Panel recommends amending Rule 20 to reference “<i>Schedules 5A and B</i>” as requested by the submitter.</p> <p>The placement of mooring monitoring structures is a small scale activity (i.e. the mooring structure and the monitoring or sampling equipment must not occupy an area exceeding 5 m² of the coastal marine area), that has not, in the past experience of the Council, resulted in noticeable adverse effects. Due to the straight forward nature of the activity, and the low impacts that it has, the Hearing Panel does not believe that this activity requires further monitoring or the need to impose unnecessary restrictions and costs on people to obtain a resource consent. The Hearing Panel is confident that the permitted activity classification is reasonable for this activity.</p> <p>Notwithstanding the above, the Hearing Panel is aware that iwi/hapū may be interested to know when such activities are being undertaken and notes that the Council has an arrangement with iwi authorities who have requested to be informed of this activity as cited in the Activity Description.</p> <p>The Hearing Panel notes that if an activity is to be commenced in a location that is not considered appropriate after having regard to the standards, terms and conditions listed, the Council will advise those undertaking the activity that a resource consent is required under Rules 33 (discretionary) or 34 (non-complying) depending on the coastal management area. If any issues of non-compliance arise the Council will take swift and appropriate enforcement action.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	812	<p>Amend</p> <p>Submitter seeks amendment to Rule 20 of the Plan to include new and amended standards, terms and conditions to read:</p> <p>(b) the placement of the structure placement of the mooring structure does not have an adverse effect on the values associated with <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage];</p> <p>(c) the placement of the structure and discharge does not have adverse effect on <u>Schedules 1 and 2</u>;</p>	<p>Accept in part</p> <p>The Hearing Panel notes that this rule is specific to the management of small mooring monitoring structures (i.e. the mooring structure and the monitoring or sampling equipment must not occupy an area exceeding 5 m² of the coastal marine area).</p> <p>The Hearing Panel is concerned that the effect of the new and amended conditions would make the rule unnecessarily restrictive and have perverse outcomes. The relief seeks to exclude the activity from sites of significance</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(d) the activity does not occur at any site identified in Schedule 5B [Sites of significance to Māori and associated values] and Appendix 2:</u></p> <p><u>(e) the placement of the structure and discharge does not adversely affect the suitability of the receiving water for customary use and bathing after reasonable mixing:</u></p> <p><u>(f) placement of the mooring structure and the discharge does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]</u></p> <p><u>(g) the mooring structure and the monitoring or sampling equipment does not occupy an area exceeding 5m² of the coastal marine area [...]</u></p>	<p>regardless of whether it has any impacts on those values and despite the potential for the activity to contribute to the protection and management of sites of significance (e.g. mahinga kai and pukawa values) or taonga species (presence/absence/abundance).</p> <p>Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> The Hearing Panel refer the submitter to previous comments made on expanding the scope of historic heritage. Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. The proposed Condition (c) is too wide ranging, unnecessarily restrictive, and uncertain for Plan users. Note that the discharges associated with this Rule are only those associated directly with the placement of the structure and there is no need to paraphrase the gateway in the individual conditions. The submitter proposes to include a new standard (f), however, the reference to sites of significance to Māori located in Schedule 5B has already been included within Condition (b). It is not necessary to repeat this Condition using different wording. In regards to requested Condition (e), the Hearing Panel does not believe that it is necessary. Again it is noted that these activities are very small scale (<5 m² and the only possible impact on water quality is related to the potential for a little sediment disturbance similar in scale to using an anchor and which would not be noticeable in natural prevailing conditions). In regards to requested Condition (e), the Hearing Panel further recommends expanding its scope to include reference to scheduled taonga species.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
42 – Ngāti Rahiri Hapū	815	Amend Submitter seeks amendment to Rule 21 of the Plan to make navigation aid erection or placement a Discretionary or at least a controlled activity (rather than a permitted activity) AND that there be iwi/hapū consultation in all cases.	Accept in part The Hearing Panel considers the placement of navigation aids in the coastal marine area a rather straight forward activity, which contributes to maritime safety, and for which there are no or less than minor adverse effects. The most likely adverse effect is the temporary disturbance of the seabed from the placement of a small anchor. However, any effects would be transitory and very localised to the area directly in contact with the structure, and not noticeable in natural prevailing marine conditions. The Hearing Panel does not consider it necessary to elevate the activity status of this Rule to require a resource consent to be obtained due to the negligible risks involved and the protections already in place through the standards, terms and conditions. The Hearing Panel also directs the submitter to Condition (e) which requires the placement of the mooring structure to not have adverse effects on the values associated with historic heritage identified in Schedule 5 [Historic heritage], which would include kaimoana reefs. Due to the permitted activity status it is not appropriate to require the resource user to consult. However, the Hearing Panel would like to draw the submitters attention to note (1) in the Rule that explains that iwi authorities that have requested to be informed of this activity will be advised by the Council.

43 – Royal Forest and Bird Protection Society	816	Amend Submitter seeks amendment to Rule 21 of the Plan by deleting "Outstanding Value" from the coastal management areas covered by the rule.	Decline Submitter opposes the permitted rule for the erection or placement of navigation structures in Outstanding Value areas. In addition, the submitter contends that the potential adverse effects on birds from lighting associated with navigational aids do not appear to be considered within the rule. The Hearing Panel recommends declining the relief sought by the submitter. It is suggested that the erection and placement of navigational aids should be generally provided for in all coastal management areas. This recognises that all the coastal management areas may require navigational aids to ensure the safe and efficient navigation of vessels in those waters. Navigational aids are essential items of infrastructure that reduce the risks of ships grounding and vessel related oil spills that may result. It is a critical safety issue for vessel personnel as well as for the environment and it is imperative that the Plan allow and encourage the safe and appropriate use of such aids.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel suggests that adverse effects associated with the placement of maritime navigation aids, if any, are likely to be minor, including potential effects of lighting on birds. Notwithstanding that, the Hearing Panel notes that the activity is subject to compliance with the standards, terms and conditions, including Condition (f) that requires that there be no adverse effects on significant indigenous biodiversity. If the Council consider that the proposed activity is unable to meet all of the standards, terms and conditions, the Council will advise those undertaking the activity that a resource consent will be required under Rules 33 (discretionary) and 34 (non-complying) depending on the coastal management area.
43 – Royal Forest and Bird Protection Society	817	Amend	No relief necessary
		Submitter seeks amendment to the Activity description of Rule 21 of the Plan to ensure there is no disturbance of the foreshore or seabed.	The Hearing Panel notes that Rule 21 does not permit excavation of disturbance of the foreshore or seabed, only minor disturbances that occur as a result of unobtrusive activities during the placement of the structure.
43 – Royal Forest and Bird Protection Society	818	Amend	Decline
		Submitter seeks amendment to Rule 21 by deleting the Activity provisions for associate disturbance, deposition and discharge in the Rule.	The submitter suggests that the provisions for associated disturbance, deposition and discharge are uncertain and could result in adverse effects which are not addressed by the permitted standards, terms and conditions of the rule. The Hearing Panel notes that the disturbance, deposition and discharges referred to in the activity description of Rule 21 are considered minor, transitory and inconsequential (i.e. the receiving environment will be relatively unaffected by the activity with effects being naturally and promptly remedied without the need for further intervention). The Council recognises that, during the installment of navigation aids, there may be minor and transitory disturbances as a result. The impacts are generally very minor with the associated effects being similar in kind and magnitude to that associated with a vessel dropping anchor. The rule therefore seeks to bundle associated activities given they are low risk and likely to produce no or, at the most, less than minor effects.
Further submissions – Trans-Tasman Resources (6)		Oppose	
43 – Royal Forest and Bird Protection Society	819	Amend	Decline
		Submitter seeks amendment to Condition (e) of Rule 21 of the Plan to read:	The Hearing Panel recommends declining the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>[...] erection or placement of the navigation aid does not have an adverse effect on the values associated with is not within 10m of any historic heritage identified in Schedule 5 [Historic heritage] or 50m of an Outstanding Value area [...]</i>	<p>The Hearing Panel notes that historic heritage has a broad RMA definition and is not confined to archaeological sites. For historic heritage associated with sites of significance to Māori, there may be many instances where the erection or placement of navigation aids on the 'site' will have no adverse effects.</p> <p>The Hearing Panel further suggests that the erection and placement of navigational aids should be permitted in all coastal management areas, including those of Outstanding Value, especially considering the high recreational use of some of these areas and the importance of providing for the safe and efficient navigation of vessels in those waters.</p>
43 – Royal Forest and Bird Protection Society	820	Amend	No relief necessary
		Submitter seeks amendment to Rule 21 of the Plan to note that where Condition (e) of is not complied with, a new Rule 33 will apply.	<p>The Hearing Panel suggests no relief is necessary.</p> <p>The Hearing Panel notes that where Condition (e) (or any other Condition) of Rule 21 cannot be complied with, Rules 33 [discretionary activity] and 34 [non-complying activity] apply, which requires the activity to be authorised through a resource consent. This guidance has already been indicated in Note (2) of the activity description.</p>
43 – Royal Forest and Bird Protection Society	821	Amend	No relief necessary
		Submitter seeks amendment to the standards, terms and conditions of Rule 21 to ensure the activity will not occur where it would have adverse effects on values and characteristics to be protected under Policies 8 [Outstanding value], 9 [Natural character] and 14 [Significant indigenous biodiversity] of the Plan.	<p>The Hearing Panel notes that in the development of Plan provisions, consideration has been had to the type and scale of the activity and the associated effects and the Panel is satisfied that maritime navigation aid structures are unlikely to have adverse effects on outstanding natural character, features and landscapes, natural character and significant indigenous biodiversity values in the coastal environment. Certainly not at a landscape scale. However, the Hearing Panel recognises that in specific localities unforeseen impacts on significant indigenous biodiversity may occur. Accordingly Condition (f) in Rule 21 applies to protect any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4 [Significant species and ecosystems] from unforeseeable impacts.</p>
58 – Te Atiawa	822	Amend	Accept
		Submitter seeks amendment to Rule 21 by including a standard, term or condition that refers to Schedules 5A and 5B	The Hearing Panel notes that Condition (e) already refers to "historic heritage" identified in Schedule 5. However, in aligning with granting similar requests

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		OR amending the activity classification to a controlled activity (rather than a permitted activity).	sought by the submitter, the Hearing Panel recommends amending references to "Schedule 5" to refer to "Schedules 5A and 5B". The activity described is a fairly routine activity that has not, in the past experience of the Council, resulted in significant adverse effects. The Hearing Panel therefore suggests that the permitted activity classification is reasonable and appropriate for this activity. Of note, the Rule requires notification prior to the commencement of the activity and Council will maintain a record of all navigation aids placed, this allows for routine monitoring.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		activity description AND insert a new Restricted Discretionary rule (see NEW Rule 22A below).	bridge. At the hearing of submissions the submitter also raised concerns that the standards, terms and conditions that protect sensitive marine benthic habitats.
Further submissions – Powerco (45)		Oppose in part	<p>The Hearing Panel agrees with that assessment but are confident that subject to the standards, terms and conditions of this controlled activity rule, any adverse environmental effects are reasonably foreseeable and can be appropriately avoided, remedied or mitigated via conditions on a resource consent. Further, the Council has retained a large number of matters of discretion which allow the Council to identify appropriate avoidance, remediation and/or mitigation measures to address adverse environmental effects on a case by case basis.</p> <p>At the hearing of submissions, the submitter spoke further on Rule 22 in opposition to the inclusion of outstanding value in the gateway. The Hearing Panel agrees with the submitter and recommend a new Restricted Discretionary Rule for Outstanding Value coastal management areas and for the placement or erection of network utility structures in other coastal management areas but were unable to comply with all the standards, terms and conditions of Rule 22. This approach is consistent with other Rules that address network utility structures in Outstanding Value areas (Rules 37 and 37A).</p> <p>Activities that do not come within (e.g. Outstanding Value coastal management areas) or comply with the standards, terms and conditions of Rule 22 are more appropriately managed through new Rule 22A (Restricted Discretionary).</p> <p>In relation to protection of sensitive marine benthic habitats, the Hearing Panel recommends amendments to Condition (c) to ensure that Schedule 4B (which includes identified sensitive marine benthic habitats) is also included in the considerations. The amended condition would read as follows:</p> <p><u>(c) the activity does not have an adverse effect on significant indigenous biodiversity, including those identified in Schedule 4 [Significant indigenous biodiversity]:</u></p> <p>The Hearing Panel further recommends that this amendment is carried across all of the rules which include a condition addressing the protection for significant indigenous biodiversity.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	830	Amend Submitter seeks amendment to Rule 22 of the Plan to make the erection or placement of network utility structures in the coastal marine area a discretionary activity (rather than a controlled activity) so that Ngāti Mutunga and others can be involved in the decision making/resource consent process and also in monitoring of this activity if necessary.	Decline The Hearing Panel notes that this rule seeks to provide for the placement of important network utilities that might traverse the coastal marine area pursuant to Policy 6 of the Plan and subject to the appropriate management of adverse effects. Through the consenting process, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately managed. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary. Some certainty for these uses is considered appropriate, which would not be the case if the activity was made a discretionary activity (with the ability to decline a resource consent application). The Council has not encountered significant issues with the placement of utility structures in the coastal marine area under the current Plan and therefore the Hearing Panel does not consider it appropriate or necessary to require the placement of network utility structures to be made more restrictive by making it a discretionary activity.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
41 – Te Korowai o Ngāruahine Trust	831	Amend Submitter seeks amendment to Condition (b) of Rule 22 of the Plan to read: <i>(b) erection or placement of the structure does not have an adverse effect on the values associated with historic heritage identified in Schedule 5A and B Historic heritage; [...]</i>	Accept The Hearing Panel agrees to refer to “Schedule 5” as “Schedule 5A and 5B” as requested by the submitter. The Hearing Panel recommends other consequential amendments throughout the Plan to maintain consistent language.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
42 – Ngāti Rahiri Hapū	832	Amend Submitter supports the activity classification as controlled but seek amendment of Rule 22 to protect reef systems AND that there be iwi/hapū consultation in all cases.	Accept in part The Hearing Panel notes the concerns of the submitter and recommend amending relevant standards, terms and conditions to clarify that the activity cannot have any adverse effects on significant indigenous biodiversity, which includes reefs. The Hearing Panel notes that Conditions (b), (c) and (ca) would generally restrict the activity from occurring in areas identified as significant under Schedule 4 [Significant indigenous biodiversity], Schedule 4C [Taonga species] and Schedule 5A and B [Historic heritage].

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Nearshore reefs are identified in Policy 14(b) as sites of significant indigenous biodiversity. Nearshore reefs may also be a site of significance to Māori in relation to historic heritage. Of note, virtually the entirety coastal length of the submitter's rohe is identified in the Plan and associated coastal maps as having kai moana values. Through the consenting process, conditions will be imposed to manage adverse effects, including the protection of the reef systems.</p> <p>The Hearing Panel further notes that, as part of this coastal plan review process, and in relation to 'sites of significance' to Māori (many of which relate to inshore reefs), Council has already agreed, subject to conditions, to recognise iwi as an affected party for all resource consent applications. There will be further opportunity to set consultation requirements and expectations as part of the development of any Mana Whakahono a Rohe agreements.</p>
43 – Royal Forest and Bird Protection Society	833	<p>Amend</p> <p>Submitter seeks amendment to Rule 22 of the Plan by changing the rule classification to make the erection or placement of network utility structures in the coastal marine area a restricted discretionary activity (rather than a controlled activity).</p>	<p>Decline</p> <p>The Hearing Panel notes that Rule 22 seeks to provide for the placement of important network utilities that might transsect the coastal marine area pursuant to Policy 6 of the Plan and subject to the appropriate management of adverse effects. Through the consenting process, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately considered and managed having reference to the General Policies of the Plan plus relevant Activity-specific Policies. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary. Some certainty for these uses is considered appropriate, which would not be the case if the activity was made a discretionary activity (with the ability to decline a resource consent application).</p> <p>The Council has not encountered significant issues with the placement of utility structures in the coastal marine area under the current Plan and therefore do not consider it appropriate or necessary to require the placement of network utility structures to be made a restricted discretionary activity.</p> <p>Notwithstanding the above, the Hearing Panel considers that an additional Restricted Discretionary rule should be included to address the placement or erection of network utility structures in Outstanding Value coastal management areas or where the activity does not meet the standards, terms</p>

			or conditions of Rule 22. The Hearing Panel notes that this approach is consistent with other areas of the Plan (Rules 37 and 37A).
43 – Royal Forest and Bird Protection Society	834	Amend	No relief necessary
		Submitter seeks the inclusion of a standard, term and condition in Rule 22 of the Plan that requires a 100m set back from Outstanding Value coastal management areas.	No precise details of the rationale for the relief sought has been provided, or indeed what the proposed setback distance would achieve. The Hearing Panel recommends declining the relief sought by the submitter noting that most of the activities covered by this rule require the structure to be buried or are of small scale. Of note, in the event that this activity is of a type or scale that it could have an impact on Outstanding Values, the Rule reserves control over the location of the work. Of note activities occurring within the Outstanding Value coastal management areas will be addressed separately through an additional Restricted Discretionary rule.
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose in part	
43 – Royal Forest and Bird Protection Society	835	Amend	Accept in part
		Submitter seeks the inclusion of the following matters of discretion for the amended Rule 22 of the Plan: <u>(x) effect on indigenous biological diversity</u> <u>(y) effects on natural character and natural features and landscape</u> <u>(z) effects on any areas of Outstanding Value.</u>	The Hearing Panel agrees in part to the relief sought by the submitter by amending the following matters of discretion in Rule 22 (plus consequential changes to equivalent rules elsewhere in the Plan) to read: <u>(f) effects on natural character, features and landscapes values</u> <u>(fa) effects on indigenous biodiversity values</u> The Hearing Panel recommends that this amendment also be included in additional Rules, where appropriate, to maintain consistency. The Hearing Panel notes the amendments to term “ecological” better aligns with the wording adopted in the General Policies, which refers to “natural character, features and landscapes” and “indigenous biodiversity”. The Hearing Panel did not believe it necessary to specify in the matters of discretion areas of outstanding values as this is a subset of natural character, features and landscapes (and therefore already provided for).
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose in part	
45 – Powerco	836	Support	Accept
		Retain Rule 22 of the Plan as notified.	Support noted.
Further submissions – Port Taranaki Ltd (32)		Support	At the hearing, the submitter presented further on the rule noting that there are inconsistencies with some of the rules referring to cables and lines. The

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions– Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	Hearing Panel recommends for the purposes of certainty and clarity that the Council review and amend plan provisions to consistently refer to “cables and lines” where that is the policy intent. It is the Hearing Panel’s view that this is an inconsequential amendment.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	837	Amend Submitter seeks amendment to the Activity Description of Rule 14 of the Plan to read: <i>Network utility structure erection or placement where the structure is:</i> <i>(a) A pipeline that is buried or attached to a bridge, <u>wharf</u> or access structure [...]</i>	Accept The submitter notes that oil companies have existing pipelines in the coastal marine area and seek clarity that Rule 22 includes wharfs. This will ensure there is an appropriate pathway for new pipelines that may be required in the coastal marine area. The Hearing Panel notes that the definition of “structure” as defined by the RMA means any “...facility made by people and which is fixed to land”. This would include wharfs. For the purposes of certainty and clarity, the Hearing Panel recommends expanding the activity description of Rule 22 of the Plan to explicitly identify wharfs. In addition, the Hearing Panel notes that if an activity cannot comply with the standards, terms and conditions of Rule 22 or is within an area of Outstanding Value it will be addressed under new Restricted Discretionary Rule 22A.
Further submissions – Transpower NZ Ltd (26)		Oppose	
58 – Te Atiawa	838	Amend Submitter seeks amendment to Rule 22 of the Plan to change the activity classification to discretionary activity (rather than a controlled activity).	Decline The Hearing Panel notes that Rule 22 seeks to provide for the placement of important network utilities that might transect the coastal marine area pursuant to Policy 6 of the Plan and subject to the appropriate management of adverse effects. Rule 22 requires such activities to obtain a resource consent. However, some certainty for these uses is considered appropriate, which would not be the case if the activity were made a discretionary activity (with the ability to decline a resource consent application). Through the consenting process, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately managed. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary. The Council has not encountered significant issues with the placement of utility structures in the coastal marine area under the current Plan and therefore the Hearing

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Panel does not consider it appropriate or necessary to require the placement of network utility structures to be made a discretionary activity.</p> <p>Notwithstanding the above, the Hearing Panel note that if an activity cannot comply with the standards, terms and conditions of Rule 22 or is within an area of Outstanding Value it will be addressed under new Restricted Discretionary Rule 22A.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	839	<p>Amend</p> <p>Submitter seeks amendment to Rule 22 of the Plan to include new and amended standards, terms and conditions to read:</p> <p><i>(a) no erosion or scour results from erection or placement of the structure;</i></p> <p><i>(b) erection or placement of the structure does not have an adverse effect on the values associated with <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage];</i></p> <p><i>(c) erection or placement of the structure does not have adverse effect on Schedules 1 and 2</i></p> <p><i>(d) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</i></p> <p><i>(e) does not adversely affect the suitability of the receiving water for customary use</i></p> <p><i>(f) erection or placement of the structure does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat] and</i></p> <p><i>(g) structure does not adversely affect access to or use of the area surrounding the structure.</i></p>	<p>Accept in part</p> <p>The Hearing Panel notes that Rule 22 seeks to provide for the placement of important network utilities that might transect the coastal marine area pursuant to Policy 6 of the Plan and subject to the appropriate management of adverse effects. Through the consenting process, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately managed. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary.</p> <p>The submitter seeks to introduce a number of new and amended standards, terms and conditions to the Rule. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (b). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (c). Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. The proposed Condition (c) is too wide ranging, unnecessarily restrictive, and uncertain for Plan users. Relief sought in relation to Condition (d) is unnecessary. The submitter proposes to include a new standard (d), however, the reference to sites of significance to Māori located in Schedule 5B has already been included within Condition (b) of the Plan. It is not necessary to repeat this Condition using different wording. Relief sought in relation to Condition (e) is unnecessary. Again such matters are largely already addressed in Condition (b) of the

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Plan, which protects customary sites of significance. However, it is noted that any impacts on receiving water quality will be temporary and unlikely to be noticeable in natural prevailing conditions).</p> <ul style="list-style-type: none"> Grant the relief in kind in relation to Condition (f). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species (new standard, term and condition (ca)).
61 – Te Rūnanga o Ngāti Ruanui Trust	840	<p>Amend</p> <p>Submitter seeks amendment the control and notification column of Rule 22 of the Plan to read:</p> <p>(a) location, method, timing and notification of works;</p> <p>(b) design, construction, maintenance and decommissioning of structure;</p> <p>(c) effects on other authorised structures or activities;</p> <p>(d) sediment movement and erosion;</p> <p><u>(e) effects on matters/values identified for protection by mana whenua in the cultural impact assessment;</u></p> <p><u>(f) effects on water quality and mauri values;</u></p> <p>(g) effects on ecological values;</p> <p>(h) effects on historic, cultural and amenity values;</p> <p>(i) effects on surf breaks;</p> <p>(j) effects of occupation on public access;</p> <p>(k) effects on navigation;</p> <p>(l) effects of noise and light;</p> <p><u>(m) consistent with iwi management plan;</u></p> <p>(n) monitoring <u>(including tangata whenua indicators referred to in the tangata whenua monitoring plan)</u> and information requirements;</p> <p>(o) duration of consent; and</p> <p>(p) review of consent conditions.</p> <p><u>(q) effects on Cultural Zone (referred to in Spatial Plan)</u></p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. The suggested changes seem to be mixing jurisdictional, policy and operational matters and introducing a level of specificity and complexity that are not considered appropriate or necessary for a Plan. Most of the changes sought are a subset of matters that have already been provided for while the submitter has also introduced some new concepts such as a cultural zone and a spatial plan that do not fit within the Proposed Plan framework. There is also 'requirement' to be consistent with iwi management plans, while the submitter is silent on how other planning documents might also fit within this framework.</p> <p>The Hearing Panel notes that this activity is already subject to the General Policies 1 to 21 of which Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] are particularly relevant. The Hearing Panel further notes that there will be an opportunity to develop an agreed framework and operational detail for implementing the Plan as part of any Mana Whakahono a Rohe agreement with the submitter.</p> <p>In relation to notification requirements, the submitter (and others) have highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time, the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting reference to notification requirements from the</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<i>Resource consent applications under this Rule will not be publicly notified but may be limited notified.</i>	Plan (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).

NEW Rule 22A – Network utility structure erection or placement			
29 – Department of Conservation	841	Amend	Accept in part
		Submitter seeks amendment to Plan to include a new Restricted Discretionary rule that deals with network utility structure erection or placement where the structure is a pipeline that is buried, or a communication or electricity cable that is buried.	<p>The Hearing Panel notes that Rule 22 already seeks to provide for the placement of important network utilities that might transect the coastal marine area as a controlled activity. This is consistent with Policy 6 [Regionally important infrastructure] of the Plan but is still subject to the appropriate management of any adverse effects.</p> <p>Through the consenting process, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately managed. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary. Some certainty for allowing the placement of network utilities in the coastal marine area is considered appropriate, which would not be the case if the activity was made a restricted discretionary activity (with the ability to decline a resource consent application). Of note, as part of this Coastal Plan review, this Council has adopted a precautionary approach whereby, if uncertain that effects can be adequately identified and addressed as a permitted activity or controlled activity, it has determined that the effects will be considered as a full discretionary activity to ensure issues are fully and comprehensively canvassed.</p> <p>The Council has not encountered significant issues with the placement of utility structures in the coastal marine area under the current Plan and therefore the Hearing Panel does not consider it appropriate or necessary to require the placement of network utility structures to be made a restricted discretionary activity unless the activity is not covered by or cannot comply with the standards terms and conditions of the controlled activity rule.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			Notwithstanding the above, the Hearing Panel recommends an additional Restricted Discretionary rule to address placement or erection of network utility structures in Outstanding Value coastal management areas or where the activity does not meet the standards, terms or conditions of Rule 22. The Hearing Panel note that this approach is consistent with other areas of the Plan (Rules 37 and 37A).
45 – Powerco	842	Amend Submitter seeks new or amended rule to provide a permitted activity pathway for new network utility structures attached to existing road bridges in the coastal marine area.	Decline The Hearing Panel recommends declining the relief sought. The Hearing Panel notes that the majority of bridges that occur within the coastal marine area (and addressed through the Coastal Plan) are within estuaries and may be sensitive to activities of this nature. The Hearing Panel considers that the activity may be uncertain in terms of scale and effects and consider it appropriate to be addressed through the consenting process to ensure that any environmental effects are appropriately managed. The controlled pathway provided under Rule 22 offers the Plan user certainty of being able to undertake the necessary works provided the standards, terms and conditions are met.
Rule 23 –Port launching, mooring or berthing			
40 – Te Rūnanga o Ngāti Mutunga	843	Amend Submitter seeks amendment to Rule 23 of the Plan to make the erection and placement of launching, mooring or berthing structures in the Port a discretionary activity (rather than a controlled activity).	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that Rule 23 seeks to provide for the erection and placement of launching, mooring or berthing structures in the Port as a controlled activity. This is consistent with Policy 6 [Regionally important infrastructure] of the Plan, but is still subject to the appropriate management of adverse effects. The Hearing Panel notes that the Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the erection and placement of launching, mooring and berthing structures. This is subject to complying with the standards, terms and conditions addressing the avoidance, remedying or mitigating of adverse effects (of which those relating to historic heritage and indigenous biodiversity are particularly pertinent). The

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			Hearing Panel sees no net environmental benefit to reducing business certainty in the Port by making the activity a discretionary activity.
43 – Royal Forest and Bird Protection Society	844	Amend	Decline
		Submitter seeks amendment to Rule 23 of the Plan to make the erection and placement of launching, mooring or berthing structures in the Port a restricted discretionary activity (rather than a controlled activity).	The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that Rule 23 seeks to provide for the erection and placement of launching, mooring or berthing structures in the Port as a controlled activity. This is consistent with Policy 6 [Regionally important infrastructure] of the Plan, but is still subject to the appropriate management of adverse effects.
Further submissions – Port Taranaki Ltd (32)		Oppose	The Hearing Panel notes that the Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the erection and placement of launching, mooring and berthing structures. This is subject to complying with the standards, terms and conditions addressing the avoidance, remedying or mitigating of adverse effects (of which those relating to historic heritage and indigenous biodiversity are particularly pertinent). The Hearing Panel sees no net environmental benefit to reducing business certainty in the Port by making the activity a restricted discretionary activity.
58 – Te Atiawa	845	Amend	Decline
		Submitter seeks amendment to Rule 23 of the Plan to change the activity classification to discretionary activity (rather than a controlled activity).	The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that Rule 23 seeks to provide for the erection and placement of launching, mooring or berthing structures in the Port as a controlled activity. This is consistent with Policy 6 [Regionally important infrastructure] of the Plan, but is still subject to the appropriate management of adverse effects.
			The Hearing Panel notes that the Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the erection and placement of launching, mooring and berthing structures. This is subject to complying with the standards, terms and conditions addressing the avoidance, remedying or mitigating of adverse effects (of which those relating to historic heritage and indigenous biodiversity are particularly pertinent). The Hearing Panel sees no net environmental benefit to reducing business certainty in the Port by making the activity a discretionary activity.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 24 – Whitebait stands			
21 – Climate Justice Taranaki	846	Support	Accept
		Retain the prohibited activity status for whitebait stands in the coastal marine area.	Support noted. Rule 24 is retained subject to minor inconsequential amendments that do not change the rule's scope.
29 – Department of Conservation	847	Support	Accept
		Retain the prohibited activity status for whitebait stands in the coastal marine area.	Support noted. Rule 24 is retained subject to minor inconsequential amendments that do not change the rule's scope.
40 – Te Rūnanga o Ngāti Mutunga	848	Support	Accept
		Retain the prohibited activity status for whitebait stands in the coastal marine area.	Support noted.
41 – Te Korowai o Ngāruahine Trust	849	Amend	Decline
		Submitter seeks amendment to Rule 24 of the Plan to make whitebait stands in the coastal marine area a discretionary or non-complying activity (rather than a prohibited activity).	<p>The Rule does not exclude run-of-the-river whitebaiting, which is a popular recreational activity at many river mouths across Taranaki. However, the Rule does prohibit the establishment of whitebait structures that may contribute to over harvesting and exploitation of inanga species.</p> <p>The Hearing Panel notes that this Rule is an existing rule in the current Plan. It is a unique regional position adopted by this Council with strong community support to better protect whitebait stocks in this region. This is considered appropriate given the ongoing decline in the abundance of whitebait species in the region due to over harvesting (other necessary interventions relating to the loss of fish habitat are addressed in the Freshwater and Soil Plan).</p>
43 – Royal Forest and Bird Protection Society	850	Support	Accept
		Retain the prohibited activity status for whitebait stands in the coastal marine area.	Support noted. Rule 24 is retained as notified.
58 – Te Atiawa	851	Support	Accept
		Retain Rule 24 of the Plan as notified.	Support noted. Rule 24 is retained as notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 25 – Hard protection structure erection or placement			
32 – Port Taranaki	852	Amend Submitter seeks amendment to Rule 25 of the Plan to provide for hard protection structures within the Port coastal management area as a controlled activity (rather than a discretionary activity).	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that this Rule is an existing rule in the current Plan. Further, in accordance with the <i>New Zealand Coastal Policy Statement</i> and the policies of this Plan (particularly Policy 34), there is an expectation that hard protection structures will be discouraged and the use of alternatives promoted. This expectation is unlikely to be realised as a controlled activity.
43 – Royal Forest and Bird Protection Society	853	Amend Submitter seeks amendment to Rule 25 of the Plan by clarifying the purposes to which erosion control applies.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel does not believe this level of specificity needs to be provided in the rule. Such matters are more appropriately addressed through the consenting process, whereby the type of activity, its scale, purpose and effects can be considered on a case-by-case basis noting hard protection structures are a discretionary activity. The Hearing Panel further notes that the General Policies 1 to 21, 22, 31, 32, 33, 34, 35, 39, 40, 41, 42, 44, 45, 46, and 49 provide broad and comprehensive guidance and direction on the erection and placements of hard protection structures.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
43 – Royal Forest and Bird Protection Society	854	Amend Submitter seeks amendment to Rule 25 of the Plan by deleting Outstanding Value, Estuaries Unmodified, Estuaries Modified coastal management areas from the rule (and provide a new non-complying activity rule for the erection or placement of hard protections structures in such areas).	Decline The Hearing Panel notes there are significant urban areas that would be affected by the relief sought by the submitter such as New Plymouth, Waitara, Urenui and Patea. Many coastal settlements rely on hard protection structures to protect them from natural hazard processes. The Hearing Panel notes that this rule is an existing rule in the current Plan. The Hearing Panel recognises that, in accordance with the <i>New Zealand Coastal Policy Statement</i> and the policies of this Plan (particularly Policy 34), there is an expectation that hard protection structures will be discouraged and the use of alternatives promoted. This expectation can be met as a discretionary activity.

37 – Petroleum Exploration and Production Association of NZ	859	Amend Submitter supports Rule 26 of the Plan but seeks amendment to the Activity Description (b) in Rule 26 to align with Rule 27 to read: <i>Exploration or appraisal well drilling by an offshore installation or drilling by a land based drilling rig, and placement of a well structure in, on, under or over the foreshore or seabed and any associated:</i> [...] (b) <u>temporary exclusive</u> occupation of space in the common marine and coastal area [...]	Accept The Hearing Panel recommends granting the relief sought by the submitter as it further clarifies for plan users the type of occupation of space that occurs under Rule 26 as an associated activity.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions ²¹ – Climate Justice Taranaki Inc (21), Taranaki Energy Watch (51)		Oppose	
37 – Petroleum Exploration and Production Association of NZ	860	<p>Amend</p> <p>Submitter supports Rule 26 but seeks amendment to standard, term and condition (a) to read:</p> <p><i>(a) drilling is not undertaken within 2,000 m of any site where drilling has occurred in the previous five years <u>unless the Applicant can show to the satisfaction of Council that drilling within these parameters would avoid any potential cumulative effects</u> [...]</i></p>	<p>Grant in kind</p> <p>The Hearing Panel recommends granting in kind the relief sought by the submitter.</p> <p>The Hearing Panel notes that the reason for including a buffer distance is to address the cumulative effects of drilling fluids and cuttings being discharged and deposited on the seafloor surrounding the drilling site which may have an adverse effect on benthic communities. The Hearing Panel considers that if drilling cuttings and fluids are removed during the operation that there will be no cumulative effects. The Hearing Panel recommends amending Condition (a) to provide an option for this that read as follows (Hearing Panel note that additional amendments are also proposed in response to other submitters concerns relating to Condition (a)):</p> <p><u><i>(a) the activity does not involve the discharge or deposition of drilling fluids, muds or cuttings:</i></u></p> <p><i>(i) within 2,000 m of any <u>seabed location</u> where drilling has occurred in the previous five years; <u>or</u></i></p> <p><i><u>(ii) from multiple wells originating from a single well head: [...]</u></i></p> <p>The Hearing Panel considers that further direction with regards to the disposal of drilling fluids and cuttings is required and recommends a footnote to read as follows:</p> <p><u><i>Drilling fluids, muds and cuttings must be removed for authorised disposal.</i></u></p> <p>At the hearing, the submitter opposed standards, terms and conditions (d) and (da) relating to significant indigenous biodiversity and taonga species noting that compliance with these conditions would be subjective and therefore is uncertain. The Hearing Panel notes that as part of a precautionary approach these conditions have been considered appropriate and give effect to Policy 11 [Indigenous biological diversity (biodiversity)] of the <i>New Zealand Coastal Policy Statement</i> and other policies of the Plan. The Hearing Panel notes that for certainty, and to assist Plan users, species and habitats identified as significant indigenous biodiversity and taonga species of concern have been</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>included in Schedules 4A, 4B and 4C. The Hearing Panel notes that it is not uncommon for plans to include values based assessments for permitted and controlled activities and that similar conditions are included in the current <i>Coastal Plan for Taranaki</i> and have been successfully implemented and enforced over the life of the Plan.</p> <p>In addition, at the hearing, the submitter sought that an additional rule be included in the Plan to allow exploration and appraisal drilling to occur as a restricted discretionary activity should it not meet the standards, terms and conditions of Rule 26. The Hearing Panel recommends declining this relief and considers that an appropriate activity classification has already been provided as discretionary and non-complying activities under Rules 27 and 28 noting the values and sensitivities of the coastal management areas affected.</p>
40 – Te Rūnanga o Ngāti Mutunga	861	<p>Amend</p> <p>Submitter seeks amendment to Rule 26 of the Plan to make exploration or appraisal of well drilling a discretionary activity (rather than controlled activity) AND</p> <p>Amend Conditions (c) and (e) to read:</p> <p>(c) Drilling is not undertaken within <u>in the airspace above any site and to the centre of the earth below</u> any site identified in Schedule 5</p> <p>[...]</p> <p>(e) Drilling is undertaken at least 2,000 m <u>6,000 m</u> from the line of mean high water springs [...]</p>	<p>Decline</p> <p>The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. It is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are totally different activities with totally different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation.</p> <p>The drilling associated with seabed exploration is not considered to have more than minor adverse effects, subject to compliance with standards, terms and conditions set out in Rule 26. Through the consenting process, relevant environmental effects will be appropriately managed and, in part reflecting a precautionary approach, specific conditions apply whereby the activity must be 2,000 m or more from the line of the mean high water springs or from any Outstanding Value coastal management area, 1,000 m or more from any sensitive marine benthic habitats, including reef systems, and 2,000 m from any other drilling site.</p> <p>The development of the rules regime and proposed standards, terms and conditions were informed by the report <i>Offshore Petroleum Drilling Review</i> (August 2015). Some certainty for these uses is considered appropriate,</p>
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		<p>Oppose</p>	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>which would not be the case if the activity was made a discretionary activity (with the ability to decline a resource consent application).</p> <p>In relation to the amendments to the conditions, those relating to (c) are considered unnecessary. The Hearing Panel also does not recommend extending the buffer distance from 2,000 m to 6,000 m from the line of the mean high water springs. The submitter has not provided any additional information as to why the additional buffer area is required. However, the Hearing Panel notes that Conditions (b), (c) and (d) include additional locational constraints that should address any areas of concern.</p>
41 – Te Korowai o Ngāruahine Trust	862	<p>Amend</p> <p>Submitter seeks amendment to Rule 26 of the Plan to make exploration or appraisal of well drilling a discretionary activity (rather than controlled activity)</p> <p>AND</p> <p>Amend Condition (c) to read:</p> <p><i>(c) Drilling is not drilling is not undertaken within any site identified in Schedule 5A and B Historic heritage]; [...].</i></p>	<p>Accept in part</p> <p>The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. It is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are different activities with different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation.</p> <p>The drilling associated with seabed exploration is not considered to have more than minor adverse effects, subject to compliance with standards, terms and conditions set out in Rule 26. Through the consenting process, relevant environmental effects will be appropriately managed and, in part reflecting a precautionary approach, specific conditions apply whereby the activity must be 2,000 m or more from the line of the mean high water springs or from any Outstanding Value coastal management area, 1,000 m or more from any sensitive marine benthic habitats, including reef systems, and 2,000 m from any other drilling site.</p> <p>The development of the rules regime and proposed standards, terms and conditions were informed by the report <i>Offshore Petroleum Drilling Review</i> (August 2015). Some certainty for these uses is considered appropriate, which would not be the case if the activity was made a discretionary activity (with the ability to decline a resource consent application).</p> <p>In relation to the amendment sought to Condition (c), the Hearing Panel recommends granting the relief sought.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>At the hearing, the submitter sought that consent applications for exploration to also assess the activity for the production phase. The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. The Panel noted that it is important to differentiate between hydrocarbon exploration activities and later production activities as they are different activities with different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation, and it would be unreasonable and inefficient to assess the effects of exploration and production during the exploration phase.</p> <p>The Hearing Panel considers that an assessment of effects of production during exploration phase is potentially unreasonable. First, there is no certainty that production will occur. Second, consenting an activity that might not occur until sometime in the future, may have a perverse outcome in that new information on environmental effects might arise in the interim but the activity has already been authorised.</p>
42 – Ngati Rahiri Hapū	863	<p>Amend</p> <p>Submitter seeks amendment to the conditions of Rule 26(c) to read: <i>(c) drilling is undertaken within, <u>over, or under</u>, any site identified in Schedule 5 Historic heritage]; [...]</i> AND That there be iwi/hapū consultation in all cases.</p>	<p>No relief necessary</p> <p>The Hearing Panel recommends declining the relief sought noting that the relief would restrict the consideration of more environmentally acceptable options to avoid or mitigate impacts on historic heritage values such as directional drilling under sites of significance.</p> <p>The Hearing Panel notes that, as part of this Coastal Plan review process, and in relation to 'sites of significance' to Māori, Council has already agreed, subject to conditions, to recognise iwi as an affected party for all resource consent applications. There will be further opportunity to set consultation requirements and expectations as part of the development of Mana Whakahono a Rohe agreements.</p>
43 – Royal Forest and Bird Protection Society	864	<p>Amend</p> <p>Submitter seeks amendment to Rule 26 of the Plan by amending the Activity classification to make exploration or appraisal of well drilling a restricted discretionary activity (rather than controlled activity).</p>	<p>Decline</p> <p>The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. It is important to differentiate</p>

Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
43 – Royal Forest and Bird Protection Society	866	Amend	No relief required
		Submitter seeks amendment to Rule 26 of the Plan by identifying areas of significant biodiversity and excluding these from this rule.	The Hearing Panel suggests that the relief sought by the submitter has already been provided for.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Department of Conservation (29)		Support	<p>The Hearing Panel notes that Rule 26 already excludes drilling areas from Outstanding Value, Estuary Unmodified and Estuary Modified coastal management areas. Furthermore Conditions (b) and (d) also apply that require the consideration of indigenous biodiversity matters. The Hearing Panel does not consider it appropriate or necessary to exclude drilling activities from other parts of the Open Coast or the Port regardless of whether the activity is having adverse effects or not.</p> <p>The effects associated with seabed exploration drilling will generally be less than minor, subject to compliance with standards, terms and conditions set out in Rule 26. Through the consenting process, relevant environmental effects will be appropriately managed and, in part reflecting a precautionary approach, specific conditions apply whereby any activity involving the incidental deposition of drilling cuttings and fluids must be 2,000 m or more from the line of the mean high water springs or from any Outstanding Value coastal management area, 1,000 m or more from any sensitive marine benthic habitats, including reef systems, and 2,000 m from any other drilling site where the activity will result in the deposition of drilling fluids and cuttings.</p> <p>The Hearing Panel believes it is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are totally different activities with totally different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation.</p>
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
43 – Royal Forest and Bird Protection Society	867	Amend	Decline
		Submitter seeks amendment to Rule 26 of the Plan by adding a requirement to publicly notify under this rule.	<p>The Hearing Panel does not consider it appropriate to include this level of operational detail in the Plan but notes that in accordance with its standard operating procedures, activities that are identified as a controlled activity are generally not publicly notified.</p>
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
51 - Taranaki Energy Watch	868	Amend	Decline
		<p>Submitter seeks amendment to Rule 26 of the Plan by amending the activity classification to make exploration or appraisal of well drilling so that it is a :</p> <ul style="list-style-type: none"> discretionary activity (rather than controlled activity) 	<p>The Hearing Panel recommends declining the relief sought by the submitter (although noting that some matters are already addressed in the Plan).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> non-complying activity in open coast, estuaries modified and port areas prohibited activity in the coastal managements areas of outstanding value and estuaries unmodified 	<p>The Hearing Panel believes that it is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are totally different activities with totally different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation.</p> <p>The effects associated with seabed exploration drilling will generally be less than minor in the Open Coast or Port, subject to compliance with standards, terms and conditions set out in Rule 26. Through the consenting process, relevant environmental effects associated with the drilling will be appropriately managed and specific conditions applied to ensure any adverse effects are appropriately avoided, mitigated or remediated.</p> <p>Drilling activities in the Open Coast or Port that cannot comply with the standards, terms and conditions of Rule 26 are a discretionary activity (under Rule 27). It is also noted that drilling in Estuaries Modified is already addressed in the Plan as a non-complying activity (under Rule 28).</p> <p>The Hearing Panel emphasises that Rule 26 already excludes drilling areas from the Outstanding Value, Estuary Unmodified and Estuary Modified coastal management areas. Non-complying activities require a resource consent and Council cannot grant the consent unless the effects of the activity are minor and the activity is not contrary to the objectives and policies of the Plan. This represents a high level of protection.</p>
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	
51 - Taranaki Energy Watch	869	<p>Amend</p> <p>Submitter seeks amendment to Rule 26 of the Plan to identify how many exploration wells can be drilled by a company as part of “exploration and appraisal well drilling”. In cases where more than one exploration well is drilled indicate how this will affect the buffer zone area.</p>	<p>Accept</p> <p>The submitter is concerned that multiple wells may be drilled as a controlled activity when advice to the Council from the Cawthron Institute regarding separation distances recommended larger distances than those identified in the Rule standards, terms and conditions.</p>
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	<p>The Hearing Panel recommends amendments to Rule 26 in response to the concerns of the submitter.</p> <p>Prior to the notification of the Proposed Plan, the Council sought advice from the Cawthron Institute on appropriate buffer distances for exploration and appraisal drilling activities. The advice received noted that effects on benthic communities are generally localised and associated with the deposition of drilling material at, or near the drilling site. A 1,000 m buffer distance was recommended by Cawthron for exploration drilling activities involving a single</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>well, however, a greater distance (possibly greater than 6,000 m) was advised for drilling campaigns where multiple wells were to be drilled.</p> <p>The Hearing Panel considers the current buffer Condition (a) to be appropriate for single well (exploration) drilling operations but consider that the rule should offer direction for multiple wells. The Hearing Panel notes that the environmental effects of concern associated with multiple wells relates to the cumulative effects of drilling cuttings and fluids being discharged and deposited on the seabed. The Hearing Panel considers that, under the controlled activity classification, drilling of this nature should not occur unless the drilling fluids and cuttings are removed during the drilling process prior to being discharged.</p> <p>At the hearing, the submitter also sought amendment to Condition (a) to clarify that the drilling activity does not involve the discharge or deposition of drilling muds. The Hearing Panel agrees and recommends amending Condition (a) to read as follows:</p> <p><u>(a) the activity does not involve the discharge or deposition of drilling fluids, muds or cuttings:</u></p> <p>(i) within 2,000 m of any <u>seabed location</u> where drilling has occurred in the previous five years; <u>or</u></p> <p><u>(ii) from multiple wells originating from a single well head; [...]</u></p> <p>The Hearing Panel also considers that further direction with regards to the disposal of drilling fluids and cuttings is required and recommends a footnote to read as follows:</p> <p><u>Drilling fluids, muds and cuttings must be removed for authorised disposal.</u></p>
53 - Taranaki Regional Council	870	<p>Amend</p> <p>Submitter seeks amendment to Activity Description (b) of Rule 26 of the Plan to read:</p> <p>(b) <u>temporary exclusive</u> occupation of space in the common marine and coastal area; [...]</p>	<p>Accept</p> <p>The Hearing Panel recommends granting the relief sought by the submitter to clarify that occupation of space, associated with the drilling activity, in the common marine and coastal area is not permanent.</p>
58 – Te Atiawa	871	<p>Amend</p> <p>Submitter seeks amendment to Rule 26 of the Plan to change the activity classification to discretionary activity (rather than controlled activity).</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose	<p>The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust		<p>Submitter seeks amendment to Rule 26 of the Plan by deleting matters included in the Control/Notification column of the Rule and including the following notification note:</p> <p><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></p>	<p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to “matters of control/discretion” and deleting any references to consenting notification requirements from the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p> <p>The Hearing Panel further notes that, in addition to the requirements of the RMA, notification to iwi can also be addressed through Mana Whakahono a Rohe agreements without the need to be included in the Plan rules.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Rule 26A – Disturbance of seabed by mining			
6 – Trans-Tasman Resources Ltd	878	<p>Amend</p> <p>Submitter seeks amendment to the Plan by including a new Rule 26A to explicitly address disturbance of the seabed by drilling, which would read as follows:</p> <p><u>26A Disturbance of seabed by drilling</u></p> <p><u>Classification: Permitted activity</u></p> <p><u>Coastal management areas: Estuaries Unmodified, Estuaries Modified, Open Coast, Port</u></p> <p><u>Standards, terms and conditions</u></p> <p><u>(a) Drilling is confined to mud, silt, sand, gravel and other fine sediments;</u></p> <p><u>(b) drilling does not occur within the Schedule 2 locations or within 200m of the Schedule 2 locations;</u></p> <p><u>(c) spacing between drilling locations (other than a re-drill or twinning of a hole) is not less than 0.5 km;</u></p> <p><u>(d) recurrent drilling (other than a re-drill or twinning of a hole) at the same location does not occur more frequently than once every two months;</u></p> <p><u>(e) the volume of material removed from a drilling location does not exceed 0.3 m³;</u></p> <p><u>(f) the area of seabed disturbed at a drilling location does not exceed 3 m²;</u></p> <p><u>(g) drilling does not have an adverse effect on the values associated with historic heritage identified in Schedule 5 [Historic heritage];</u></p> <p><u>(h) drilling does not have an adverse effect on any threatened or at risk (declining) species, or any rare and uncommon ecosystem type, including those identified in Schedule 4 [Significant indigenous biodiversity] or any reef system; and</u></p> <p><u>(i) Taranaki Regional Council is informed of the scale, location and timing of the activity at least five working days before work commences by entering details of the activity at www.trc.govt.nz/informcouncil.</u></p>	<p>Grant in kind</p> <p>The submitter presented additional evidence on the requested Rule 26A at the hearing of submissions. The submitter clarified that the intent of the rule was to provide a pathway for drilling for the taking of core samples for scientific purposes and considers that this activity is minor and routine.</p> <p>The Hearing Panel notes that Rule 52 already addresses minor disturbances of the seafloor for the activity of benthic grab samples. The Hearing Panel considers that the activity described is similar in scale and impact to Rule 52 and recommends amending Rule 52 to broaden the 'gateway' to provide for small-scale drilling for scientific purposes as a permitted activity.</p> <p>The Hearing Panel notes that the drilling activity must comply with all the standards, terms and conditions, which, amongst other things, set specific limits to ensure that the effects will be less than minor. If the activity is unable to comply with the standards, terms and conditions, a resource consent is required. The Hearing Panel recommends the inclusion of a revised controlled activity rule and a new restricted discretionary rule (depending upon coastal management area affected) to allow for drilling in circumstances where the activity cannot meet the permitted activity standards, terms and conditions.</p> <p>The Hearing Panel refers the submitter to Rules 52, 52A and 52B and note that Rule 52A has also been crafted to address geotechnical bore hole drilling amongst others.</p>

Rules 26, 27 and 28 – Exploration or appraisal of well drilling in the Open Coast or Port			
21 – Climate Justice Taranaki	879	Amend Submitter seeks that drilling of any petroleum exploration or appraisal well and associated activities in the coastal marine area be a prohibited activity OR If this is not acceptable to Council, seek that the drilling of any petroleum exploration or appraisal well and associated activities in the Open Coast and Port be a discretionary activity (rather than controlled activity) and that consent applications be Publicly Notified (whether the activity is deemed Discretionary or Controlled) OR If Rule 26 retains its controlled activity status, seek that the setback distance of 1,000m from sensitive marine benthic habitat (Schedule 4B), reef system or boundary of Outstanding Value coastal management areas be increased to at least 6,000 m.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that the seabed drilling in the Open Coast and Port is a permitted activity under the current Plan but is proposed to be a controlled activity for which a resource consent is required. It is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are totally different activities with totally different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation. The drilling associated with seabed exploration should not result in more than minor adverse effects, subject to compliance with standards, terms and conditions set out in Rule 26. It is therefore considered inappropriate to make this activity a discretionary activity yet alone a prohibited activity. The submitter states that if the controlled activity status is retained, then they seek extended set back distances (from 1,000 m to 6,000 m) to be made from sensitive marine benthic habitat, reef systems or the boundary of Outstanding Value coastal management areas. No information has been provided to demonstrate why the proposed buffer distances are more appropriate

			compared to those adopted in the Rule and which were based on Cawthron recommendations set out in their advice entitled <i>Petroleum Drilling Activities: Buffer Distances From Outstanding Areas and Substrate Types Requiring Protection</i> .
Rules 26 to 30 – Exploration or appraisal well drilling			
51 - Taranaki Energy Watch	880	Amend Submitter supports the bundling of consents in Rules 26 to 30 of the Plan and that activities that include an onshore and offshore component should be bundled together, however, opposes the use of bundling to make all petroleum activities a controlled activity in the coastal marine area.	Decline The Hearing Panel note the submitter's support in relation to bundling the onshore and offshore components of drilling. In relation to the submitter's opposition to bundling all petroleum activities as a controlled activity in the coastal marine area, the Hearing Panel notes that the rules differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities. Accordingly not "all" petroleum related activities have been bundled in this Rule. Separate rules apply recognising the different phases of hydrocarbon exploration and production activities and associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation. In relation to drilling activities, the 'bundled' activities identified in the Activity Description are incidental activities that would typically occur in association with any drilling activity. Their effects are considered and addressed as part of the standards, terms and conditions set out in the Rule.

51 - Taranaki Energy Watch	881	Amend Submitter seeks amendment to Rules 26-30 of the Plan by: <ul style="list-style-type: none"> • incorporating a precautionary approach in the rules • having regard to the <i>Marine Oil Spill Contingency Plan (MOSCP, 2012)</i>, in particular <i>Appendix 4. Sensitive Site Coastal Info</i> when considering the rules notification and activity status • applying an assessment criteria to discretionary oil and gas activities within the coastal marine area that includes consideration of low probability but significant adverse effects events and buffer zones as appropriate planning tools 	Decline The Hearing Panel suggests that Rules 26 to 30 of the Plan do incorporate a precautionary approach, whereby for drilling in the Open Coast or Port (for which the activity and adverse effects are relatively low, subject to compliance with standards, terms and conditions) conditions have been applied that includes buffer distances based on Cawthron advice requiring the activity to be 2,000 m or more from the line of the mean high water springs or from any Outstanding Value coastal management area, 1,000 m or more from any sensitive marine benthic habitats, including reef systems, and 2,000 m from any other drilling site.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> add a requirement to publically notify under these rules. 	<p>Rules 27 to 30 relate to drilling activities not being able to comply with Rule 26 and/or later production activities (which involve an increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation). These Rules require any drilling or later production activities to be considered as a discretionary activity or a non-complying activity depending upon coastal management area affected.</p> <p>Through the consenting process, relevant environmental effects will be appropriately considered and Policies 1 to 21, 22, 28, 29, 30, 31, 32, 36, 37, 38, 39, 40, 41, 42, 44, 47 and 49, including Policy 3 relating to the adoption of a precautionary approach.</p> <p>The development of the rules regime and proposed standards, terms and conditions were informed by the report <i>Offshore Petroleum Drilling Review</i> (August 2015). It included consideration of the <i>Marine Oil Spill Contingency Plan (2012)</i> when considering the rules notification and activity status. However, through the consenting process this and other relevant strategies, plans and reports will be further considered. Throughout this Plan review process the consideration of low probability but significant adverse effects events have been considered and work commissioned to investigate buffer zones as appropriate planning tools.</p> <p>In relation to public notification, the Hearing Panel notes that such operational matters are not a content requirement of a Plan and are addressed separately in accordance with the Council's consenting standard operating procedures which have been determined from requirements under section 95A to 95G of the RMA.</p> <p>At the hearing, the submitter presented further on the on Rules 26 to 30 requesting that all exploration activities be required to provide an assessment of effects for the activity of production also. The Hearing Panel recommends declining this relief noting that it is unreasonable and inefficient to assess the effects of exploration and production during the exploration phase. First, there is no certainty that production will occur. Second, consenting an activity that might not occur until sometime in the future, may have a perverse outcome in that new information on environmental effects might arise in the interim but the activity has already been authorised.</p>

55 – Kiwis Against Seabed Mining	882	Amend Submitter seeks amendment to the Plan so that Rules 26 to 30 are, at minimum, a discretionary activity classification and that areas with higher natural and cultural values are either non-complying activities or prohibited activity.	No relief necessary/Decline The submitter seeks that all drilling and production activities in the coastal marine area be a discretionary activity, at the very least, and non-complying or prohibited activity within areas with higher natural and cultural values. The Hearing Panel notes that the Rules 27 to 30 already give effect to the relief sought by the submitter (but not in relation to Rule 26). For Rules 27 to 30, the Hearing Panel suggests no relief is necessary as drilling and production activities in the coastal marine area are already a discretionary or non-complying activity depending upon what coastal management area the activity occurs in. As part of that framework, Outstanding Value. Estuaries Unmodified and Estuaries Modified coastal management areas have a higher level of regulatory protection under the Plan. However, drilling activities in the Open Coast or Port coastal management areas, are currently proposed to be a controlled activity (noting it is a permitted activity under the current Plan). This is considered appropriate as drilling associated with seabed exploration should have less than minor adverse effects, subject to compliance with standards, terms and conditions set out in Rule 26. It is important to differentiate between hydrocarbon <u>exploration</u> activities and later <u>production</u> activities as they are totally different activities with totally different associated environmental effects, i.e. due to the increased scale of activities and therefore effects associated with the construction and operation of an offshore petroleum production installation. The Hearing Panel does not believe it appropriate to require this activity to be a discretionary activity.

Rule 27 – Exploration or appraisal of well drilling in the Open Coast or Port			
25 – New Zealand Petroleum and Minerals	884	Support Retain Rule 27 of the Plan as notified OR Amend to restricted discretionary and include similar matters of discretion to the matters of control in Rule 26.	Accept Support for retaining Rule 27 noted.
Further submissions – Trans-Tasman Resources (6)		Support	
42 – Ngati Rahiri Hapū	885	Other Submitter question why the standards, terms and conditions and the control and notification columns are left blank for this discretionary activity rule.	No relief necessary The submitter question why there are no standards, terms and conditions for rules in the Plan relating to discretionary activities. The Hearing Panel notes that it is not standard planning practice for discretionary activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	886	Amend	Decline The Hearing Panel recommends declining the relief sought noting that “temporary” requires some context and temporary occupation will depend upon a broad consideration of all relevant policies and would be best determined on a case-by-case basis through the consenting process.
		Submitter suggests that the application of Rule 26 is uncertain as to what duration of occupation is considered temporary under Activity (b). Submitter seeks amendment to the Plan to include a policy or definition of temporary occupation.	
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Neutral	
Further submissions – Taranaki Energy Watch (51)		Support	
43 – Royal Forest and Bird Protection Society	887	Amend	Accept in part The submitter suggests that exploration and appraisal well drilling activities generates noise, vibration and disturbance that has adverse effects on marine mammals. They note that noise, vibration and disturbance can be as or more significant than for production wells and are unclear as to how the Council will ensure that activities will not have adverse effects that extend into Outstanding Value, Estuaries Unmodified and Estuaries Modified management areas. The Hearing Panel recommends amendments to relevant policies in the Plan that address, in part, some of the matters sought by the submitter.
		Submitter seeks other reliefs to the Plan that give effect to policies 11, 13, and 15 of the <i>New Zealand Coastal Policy Statement</i> and so that they provide direction for considering consent applications under this rule.	
58 – Te Atiawa	888	Amend	Decline The submitter has sought the inclusion of standards, terms and conditions for a discretionary activity rule. The Hearing Panel notes that it is not standard planning practice for discretionary activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies.
		Submitter seeks amendment to Rule 27 of the Plan to include two new standards, terms and conditions to read: <i><u>(a) drilling is not undertaken in the airspace above and in the ground below to the earth's core within any site identified in Schedule 5 [Historic heritage]; and</u></i> <i><u>(b) drilling is undertaken at least 6,000m from the line of mean high water springs.</u></i>	
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	889	Amend	Decline The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities.
		Submitter seeks amendment to Rule 27 of the Plan to include standards, terms and conditions to read:	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(a) exploration or appraisal well drilling does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></p> <p><u>(b) exploration or appraisal well drilling complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></p> <p><u>(c) exploration or appraisal well drilling is consistent with iwi management plan.</u></p> <p>AND</p> <p>Include the following notification note:</p> <p><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></p>	<p>The Hearing Panel recommends declining the relief noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies.</p> <p>The Hearing Panel note that all the matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22, 28, 29, 30, 31, 32, 36, 37, 38, 39, 40, 41, 42, 44, 47 and 49 being given effect to.</p> <p>In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and or Mana Whakahono a Rohe agreements.</p> <p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements from the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rules 29 and 30 – Petroleum production installation erection or placement			
21 – Climate Justice Taranaki	902	Amend	No relief necessary The Hearing Panel believes the issues raised by the submitter are already addressed in Rules 29 and 30. Pursuant to Rules 29 and 30 any new production well would require a resource consent as a discretionary activity or a non-complying activity, depending upon which coastal management area the activity will occur in. Through those rules a resource consent must be obtained, which would involve the consideration of appropriate buffer distances. The Hearing Panel notes that the rules differentiate between hydrocarbon exploration activities and later production activities. Due to the increased scale of effects associated with the construction and operation of an offshore petroleum production installation it maybe that a buffer distance of 6,000 m from the line of the mean high water springs is appropriate. However, the Hearing Panel still believes it is appropriate that locational and other considerations be addressed on a case-by-case basis (noting that Council may decide not to grant a consent if not satisfied that adverse effects can be appropriately avoided, remedied or mitigated) as part of a consenting process.
		Submitter opposes the drilling of new production wells but would support provisions for the maintenance and occupation of space by existing wells and associated infrastructure. If any new production wells are to be drilled, then prudent buffer distances should apply. Submitter supports provisions for the maintenance and occupation of space by existing wells and associated infrastructure but seek that the setback distance from sensitive marine benthic habitat (Schedule 4B), reef system or boundary of coastal marine area Outstanding Value be at least 6,000 m.	
Further submissions – Petroleum Exploration and Production Association of New Zealand (37)		Oppose

		Submitter seeks amendment to the standards, terms and conditions of Rule 30 of the Plan to read: <u>(a) placement of structure and discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment</u> <u>(b) placement of structure and discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u> <u>(c) placement of structure and discharge is consistent with iwi management plan</u> AND include as a control/notification: <u>Resource consent applications under this rule will be notified to tangata whenua.</u>	The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to a non-complying activity. The Hearing Panel recommends declining the relief sought noting that it is not standard planning practice for non-complying rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22, 28, 29, 30, 31, 32, 36, 37, 38, 39, 40, 41, 42, 44, 47 and 49 being given effect to. In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting references to consenting notification

			requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
Rule 31– Temporary military training			
29 – Department of Conservation	911	Amend Submitter seeks amendment to Rule 31 to exclude its application to coastal management areas Estuaries Unmodified.	Decline The Hearing Panel recommends declining the relief sought. The Hearing Panel considers the relief sought to be unnecessary and excessive. The Hearing Panel notes that granting the relief sought would exclude the New Zealand Defence Force from carrying out temporary military training exercises in and around a number of Taranaki coastal settlements (such as New Plymouth, Waitara, Urenui and Patea) as a permitted activity. This is despite the activity being a permitted activity in the current Plan and for which there have been no issues to date.
Further submissions – Climate Justice Taranaki Inc (21)		Support in part	
Further submissions – New Zealand Defence Force (33)		Oppose in part	
33 – New Zealand Defence Force	912	Amend Rule 31 is supported by the New Zealand Defence Force but, seek amendments to the conditions of the rule in the following areas: <ul style="list-style-type: none"> (a) is amended to allow temporary military training to occur for a duration of up to 31 day (d) is removed in its entirety [...] written notice is given to the adjacent territorial authority at least five working days prior to the activity commencing; [...] (g) is affected by an amendment to General Standard 8.6.3 [noise] (h) and (j) are retained as notified. 	Accept in part The Hearing Panel recommends granting most of the reliefs sought by the submitter. Specific comments on each of their submission points are as follows: <ul style="list-style-type: none"> Accept in part: The submitter noted that most temporary military training can be completed in a 31 day period and sought that this be provided for noting that they have sought a similar duration in other plans around the country. The Hearing Panel recommends increasing the duration period from 21 days (in the notified Plan) to 30 days noting that this is in alignment with that in other plans around the country and in the interests of inter-regional consistency.
Further submissions – Climate Justice Taranaki Inc (21)		Oppose	<ul style="list-style-type: none"> Accept: The Hearing Panel recommends deleting a Condition (d) and the requirement to notify another jurisdictional authority. Refer to submission point 1157 in relation to the Hearing Panel response on amendments sought to General Standard 8.6.3 [noise]. Accept: The Hearing Panel notes the submitter's support for retaining Conditions (h) and (j).

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
41 – Te Korowai o Ngāruahine Trust	913	Amend Submitter seeks amendment to Condition (j) of Rule 31 of the Plan to read: <i>(b) activity does not have an adverse effect on the values associated with historic heritage identified in Schedule 5A and B Historic heritage; [...]</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter.
Further submissions – New Zealand Defence Force (33)		Support	
42 – Ngati Rahiri Hapū	914	Amend Submitter seeks amendment to Rule 31 of the Plan to make temporary military training a controlled activity (rather than a permitted activity) AND that there be iwi/hapū consultation in all cases.	Decline The Hearing Panel recommends declining the relief sought. The Hearing Panel considers the relief sought to be unnecessary and excessive. The Panel notes temporary military training exercises are already a permitted activity in the current Plan for which there have been no issues identified to date.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	Notwithstanding the above, the Hearing Panel notes that temporary training activities not able to comply with the standards, terms and conditions of Rule 31 are a controlled activity under Rule 32 or a discretionary or non-complying activity under Rules 33 and 34, depending on the coastal management area involved. The Hearing Panel further notes Guidance note (1) of that rule that states that iwi authorities that have requested to be informed of this activity will be advised by Council.
Further submissions – New Zealand Defence Force (33)		Oppose	
43 – Royal Forest and Bird Protection Society	915	Amend Submitter seeks amendment to Rule 31 of the Plan by deleting the Estuaries Unmodified and Estuaries Modified coastal management areas from the rule.	Decline The Hearing Panel does not recommend granting the relief sought by the submitter noting that temporary military training exercises are already a permitted activity for these areas in the current Plan for which there have been no issues identified to date.
Further submissions – Climate Justice Taranaki Inc (21)		Support in part	The Hearing Panel agrees with the submitter in terms of the importance of estuaries to indigenous species but believes the issue has been adequately addressed in the Plan. Conditions (c) and (k) are particularly relevant.
Further submissions – New Zealand Defence Force (33)		Oppose	Condition (k) means the activity is subject to the activity being of a scale/type/time/location that it does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4 [Significant indigenous biodiversity].

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>Many training activities are of a type or carried out at a time that impacts on indigenous biodiversity should not be an issue. However, through Condition (c), which requires that the Council be notified at least five working days prior to the activity being undertaken, the Council will have the opportunity to consider the proposed activity and confirm that that is the case (noting that Council's GIS and other information systems are a significant repository of biodiversity information).</p> <p>If, in the Council's view the activity is of a type or being carried out at a time that there are likely to be adverse impacts on indigenous biodiversity, a resource consent would be required under Rules 32, 33 or 34.</p>
43 – Royal Forest and Bird Protection Society	916	Amend	No relief necessary
		Submitter seeks amendment to Rule 31 of the Plan by adding a standard, term and condition that noise and vibration must only be from normal operation of marine vessels and does not include any seismic testing, explosions, artillery or sonar.	<p>The Hearing Panel does not believe the amendments sought by the submitter are necessary noting that temporary military training exercises can take a number of forms, only some of which might involve noise and explosions. The effect of those activities are likely to differ depending upon where and when it is carried out. To preclude certain type of activities regardless of the likely adverse effect is not considered appropriate and would be unnecessarily restrictive.</p> <p>The Hearing Panel notes that temporary military training exercises are already a permitted activity for these areas in the current Plan for which there have been no issues identified to date. Notwithstanding that, the Hearing Panel notes that the Rule includes a number of new conditions. Conditions (c) and (k) are particularly relevant.</p> <p>Condition (k) means the activity is subject to the activity being of a scale/type/time/location that it does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4 [Significant indigenous biodiversity].</p> <p>Many training activities are of a type or carried out at a time that impacts on indigenous biodiversity should not be an issue. However, through Condition (c), which requires that the Council be notified at least five working days prior to the activity being undertaken, Council will have the opportunity to consider the proposed activity and confirm that that is the case (noting that Council's GIS and other information systems are a significant repository of biodiversity information).</p>

Further submissions – New Zealand Defence Force (33)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			If, in the Council's view, the activity is of a type or being carried out at a time that there are likely to be adverse impacts on indigenous biodiversity, a resource consent would be required under Rules 32, 33 or 34.
43 – Royal Forest and Bird Protection Society	917	Amend Submitter seeks amendment to Rule 31 by adding new standard, term and condition that the activities must not have lighting at night.	Decline The Hearing Panel recommends declining the relief sought noting that Rule 31 needs to be read in conjunction with the General Standards set out in Section 8.6 of the Plan which addresses lighting matters.
Further submissions – Climate Justice Taranaki Inc (21)		Support in part	
57 – Heritage New Zealand	918	Amend Submitter seeks amendment to the conditions of Rule 31(j) to read: <i>(j) activity does not have an adverse effect on the value associated with historic heritage identified in Schedule 5 [Historic Heritage]; and <u>structures and activities are not to be placed at any site identified in Schedule 5; and [...]</u></i>	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes the broad RMA definition of historic heritage, which includes sites and places of significance to Maori. Through this Plan review process most estuaries and reefs have been identified by iwi as significant historic heritage. Accordingly, the relief sought would unnecessarily preclude temporary military training exercises over large parts of the Taranaki coastline regardless of whether the activity is of a type/scale/time/location that it would have an impact on those values. The Hearing Panel notes that temporary military training exercises are already a permitted activity for these areas in the current Plan for which there have been no issues identified to date. Notwithstanding that, the Hearing Panel notes that the Rule includes a number of new conditions. Conditions (c) and (j) are particularly relevant. Condition (j) means the activity is subject to the activity being of a scale/type/time/location that it does not have an adverse effect on the values associated with historic heritage identified in Schedule 5A and B (41) [Historic heritage]. Many training activities are of a type or carried out at a time that impacts on historic heritage values, e.g. mahinga kai, should not be an issue. However, through Condition (c), which requires that the Council be notified at least five working days prior to the activity being undertaken, Council will have the opportunity to consider the proposed activity and confirm that that is the case.
Further submissions – Climate Justice Taranaki Inc (21)		Support in part	
Further submissions – New Zealand Defence Force (33)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			If, in the Council's view, the activity is of a type or being carried out at a time that there are likely to be adverse impacts on historic heritage, a resource consent would be required under Rules 32, 33 or 34.
61 – Te Rūnanga o Ngāti Ruanui Trust	919	<p>Amend</p> <p>Submitter seeks amendment to Rule 31 of the Plan to include new or amended standards, terms and conditions to read:</p> <p>[...]</p> <p><i>(j) activity does not have an adverse effect on the values associated with <u>cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage]</u>;</i></p> <p><i><u>(k) activity and discharge does not have adverse effect on Schedules 1 and 2:</u></i></p> <p><i><u>(l) activity and discharge does not adversely affect the suitability of the receiving water for customary use;</u></i></p> <p><i><u>(m) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2:</u></i></p> <p><i><u>(n) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant indigenous biodiversity] and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat].</u></i></p>	<p>Accept in part</p> <p>The Hearing Panel notes that Rule 31 provides for the temporary military training in the coastal marine area, subject to the appropriate management of adverse effects. Through the standards, terms and conditions of the Rule, relevant environmental effects on historic heritage, indigenous biodiversity and use and enjoyment of the coast will be appropriately managed. Other adverse effects within the coastal marine area, e.g. water quality are likely to be less than minor and temporary. Of note, temporary military training exercises are already a permitted activity for these areas in the current Plan for which there have been no issues identified to date.</p> <p>The submitter seeks to introduce a number of new and amended standards, terms and conditions to the Rule. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (j). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Relief sought in relation to Condition (k) is unnecessary and uncertain for Plan users. The Rule is only allowing incidental discharges of sediment that might arise from the training exercises. Other discharges are addressed by other rules. The Hearing Panel further notes that the effect of granting this relief would be to make this rule redundant as it requires no adverse effects (including less than minor) across the whole coastal marine area, noting that Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Relief sought in relation to Condition (l) is unnecessary. Such matters are largely already addressed in Condition (j) of the Plan, which protects customary sites of significance. However, it is noted

Further submissions – New Zealand Defence Force (33)		Oppose	in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to “ <i>matters of control/discretion</i> ” and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
NEW Rule 32A – Temporary military training			
29 – Department of Conservation	928	Amend Submitter seeks amendment to the Plan to include a new discretionary activity rule that deals with temporary military training activities that do not come within or comply with Rule 31 or Rule 32.	Grant in kind The Hearing Panel recommends amending the Activity Description of Rules 33 and 34 to include temporary military training activities and to also amend the associated activities to ensure that the gateway fully captures the associated activities relating to temporary military training activities.
Further submissions – New Zealand Defence Force (33)		Support	
Rule 33 – Other structure erection or placement			
6 – Trans-Tasman Resources Ltd	929	Support Retain Rule 33 of the Plan as notified.	Accept Support noted.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
26 – Transpower NZ Ltd	930	Amend Submitter supports Rule 33 but seek amendment to delete reference to <i>National Environmental Standards for Electricity Transmission Activities</i> : [...]or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
32 – Port Taranaki	931	Amend Submitter seeks amendment to Rule 33 of the Plan to provide for hard protection structures within the Port coastal management area not provided for in rules 18-32 to be a controlled activity.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that this Rule is an existing rule in the current Plan that provides a consenting pathway to authorise activities not otherwise provided for in the preceding rules. Given it is too difficult to envisage or foresee every form or type of activity that might take place in the coastal marine area, a catch-all rule is considered appropriate. The Hearing Panel does not consider it appropriate in such circumstances to differentiate between the Port and other activities given that, in accordance with the <i>New Zealand Coastal Policy Statement</i> and the policies of this Plan (particularly Policy 34), there is an expectation that hard protection structures will be discouraged and the use of alternatives promoted. This expectation is unlikely to be realised as a controlled activity.
32 – Port Taranaki	932	Amend Submitter seeks amendment to Rule 33 of the Plan to provide an exception for Port Taranaki Ltd within the Port coastal management area for flood protection structures (similar or same definition as in the draft New Plymouth District Plan) to be Permitted Activities.	No relief necessary The Hearing Panel does not believe any relief is necessary. The Hearing Panel is unclear what flood protection structure exist within the Port Taranaki coastal management area noting that the rules are confined to the coastal marine area.
43 – Royal Forest and Bird Protection Society	933	Amend Submitter seeks amendment to Rule 33 of the Plan to exclude Estuaries Modified coastal management areas from the discretionary activity rule.	Decline The Hearing Panel recommends declining the relief sought by the submitter and that Rule 33 continues to apply to the Estuaries Modified coastal management areas.
Further submissions – Climate Justice Taranaki Inc (21)		Support	The Hearing Panel notes there are significant urban areas that would be affected by the relief sought by the submitter such as New Plymouth, Waitara, Oakura, Urenui and Patea. The proposed rules regime recognises that these estuaries have already been modified and already include structures within the coastal marine area that contribute to social, cultural, economic and environmental wellbeing of local communities. However, through the resource consents process the appropriateness of further use and development can be considered having regard to General Policies 1 to 21 and Activity Specific Policies 31, 32, 33, 34, 35, 39 and 49.

61 – Te Rūnanga o Ngāti Ruanui Trust	938	Amend	Decline
		Submitter seeks amendment to Rule 33 of the Plan to include standards, terms and conditions to read: <u>(a) placement of structure and discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment</u> <u>(b) placement of structure and discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u> <u>(c) placement of structure and discharge is consistent with iwi management plan.</u> AND Include the following notification note:	The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to Discretionary Activities. The Hearing Panel declines the relief noting that it is not standard planning practice for discretionary activity rules to include standards, terms and conditions. Conditions relating to a discretionary activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with General Policies 1 to 21 and Activity-based Policies 31, 32, 33, 34, 35, 39 and 49 being given effect to.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>Resource consent applications under this Rule will be notified to tangata whenua.</u>	In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).

Rule 34 – Other structure erection or placement			
6 – Trans-Tasman Resources Ltd	939	Support	Accept
		Retain Rule 34 of the Plan as notified.	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	Support noted. Rule 34 is retained subject to minor amendments sought by other submitters to better capture relevant activities.
26 – Transpower NZ Ltd	940	Amend	Accept
		Submitter supports Rule 34, but seeks amendment to delete reference to <i>National Environmental Standards for Electricity Transmission Activities</i> : [...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	
30 – First Gas Ltd	941	Amend	Grant in kind
		Submitter seeks amendment to Rule 34 of the Plan to make network utility underground pipelines or pipelines attached to existing bridge or access structures in Outstanding Value coastal management area a controlled activity (rather than non-complying).	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Department of Conservation (29), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	Outstanding Value coastal management areas as a restricted discretionary activity. This amendment is similar to other reliefs provided for network utility structures in Outstanding Value areas (Rules 37 and 37A).
Further submissions – Powerco (45)		Support in part	
30 – First Gas Ltd	942	Amend	Decline
		Submitter seeks amendment to the standards, terms and conditions for Rule 34 of the Plan, similar in kind to those of Rule 22.	The Hearing Panel recommends declining the relief sought by the submitter. Refer to submission point 941 above.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
43 – Royal Forest and Bird Protection Society	943	Amend	Decline
		Submitter seeks amendment to Rule 34 of the Plan to include Estuaries Modified coastal management areas in the non-complying activity rule.	The Hearing Panel recommends declining the relief sought. The Hearing Panel notes there are significant urban areas that would be affected by the relief sought by the submitter such as New Plymouth, Waitara, and Patea. The proposed rules regime recognises that these estuaries have already been modified and already include structures within the coastal marine area that contribute to social, cultural, economic and environmental wellbeing of local communities. However, through the resource consents process the appropriateness of further use and development can be considered having regard to General Policies 1 to 21 and Activity-based Policies 31, 32, 33, 34, 35, 39 and 49.
Further submissions – Climate Justice Taranaki Inc (21)		Support

NEW Rule 34A – Other structure erection or placement			
26 – Transpower NZ Ltd	946	<p>Amend</p> <p>Submitter seeks amendment to Plan to include a new discretionary activity rule that provides for Regionally Important Infrastructure (or specific to the National Grid) in coastal management areas: Outstanding Value; Estuaries Unmodified and reads as follows:</p> <p><u>Structure erection or placement associated with Regionally Significant Infrastructure (or the National Grid) and any associated works:</u></p> <p><u>(a) occupation of space in the common marine and coastal area and does not come within or comply with Rules 18 to 32.</u></p>	<p>Accept</p> <p>The Hearing Panel recommends accepting the relief sought by the submitter.</p> <p>The Hearing Panel notes the recommendation that the Plan include a new rule addressing the placement and erection of network utility structures (that do not come within or comply with Rule 22) as a restricted discretionary activity under Rule 22A. The Hearing Panel notes that this approach is consistent with other areas of the Plan where network utilities have been recognised and provided for.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Department of Conservation (29), Royal Forest and Bird Protection Society (43)		Oppose	The Hearin Panel considers that this is a more appropriate consenting pathway for network utilities, including the National Grid, than relying on other catch-all rules that would have potentially made the activity a non-complying activity in coastal management areas Estuaries Unmodified and Outstanding Value.
Further submissions – Powerco (45)		Support in part	
Rule 35 – Maintenance repair of existing lawfully established structures			
21 – Climate Justice Taranaki	947	Amend Submitter seeks amendment to Rule 35 [Existing lawfully established structure maintenance and repair] of the Plan to make the activity Discretionary (rather than a permitted activity).	Decline The Hearing Panel does not believe it appropriate to require this activity to be a discretionary activity. The Hearing Panel notes that Rule 35 is providing for the ongoing maintenance, repair or minor alterations to already existing lawfully established structures in the coastal marine area. Subject to compliance with the standards, terms and conditions of the Rule, any adverse effects should be less than minor. The erection and placement of new structures are addressed in separate rules. The Hearing Panel notes that granting the relief would have the perverse outcome of making the authorisation for the maintenance of a structure more restrictive than its original placement. Maintenance of structures is important for ensuring the structure continues to be in sound condition. Structures that are not adequately maintained may become unsafe, hazardous or create additional environmental concerns.
26 – Transpower NZ Ltd	948	Amend Submitter seeks amendment to Rule 35 of the Plan to delete reference to National Environmental Standards for Electricity Transmission Activities: [...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
29 – Department of Conservation	949	<p>Amend</p> <p>Submitter seeks amendment to Rule 35 of the Plan to include new conditions addressing:</p> <ul style="list-style-type: none"> • how the use of vehicles and machinery in the coastal environment will be avoided where possible, and minimised/effects mitigated where necessary (including taking the shortest and least sensitive route) • the requirement for construction equipment including spoil, litter or equipment to be removed within 24 hours of completion of any works • the prohibition of any refuelling or fuel storage occur within the coastal environment and that methods should be employed to avoid any fuel spillage. 	<p>Grant in kind</p> <p>At the hearing of submissions the submitter presented alternative wording suggestions requiring any disturbance to be restored to its previous state 48 hours after the activity has been completed. The Hearing Panel consider that this addition strengthens condition (e) by encouraging Plan users to minimise any disturbances and recommend amending the condition to read as follows:</p> <p><i>(e) the extent of disturbance of the foreshore and seabed is limited to the minimum required to undertake the activity <u>and is restored to its previous state 48 hours following the completion of the activity</u>; [...]</i></p> <p>The submitter also requested an additional amendment to avoid storing fuel in the coastal marine area and to minimise the extent of any contaminant entering the coastal marine area. The Hearing Panel notes that no adverse environmental effects occur from storing fuel in the coastal marine area and that adverse effects only occur when fuel is spilled. Condition (d) addresses unacceptable discharges which any spilled fuel would trigger. The relief sought is also problematic in that that fuel storage includes fuel stored inside vehicles, such as boats, and would preclude their use for maintenance and alteration activities. Further, it is noted that the activity description includes discharges of sediment only as an associated activity (the discharges of other contaminants are not provided for under this rule).</p>
Further submissions ⁴⁵ – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	
32 – Port Taranaki	950	<p>Amend</p> <p>Submitter seeks amendment to Rule 35 of the Plan to include the Port coastal management area to this rule.</p>	<p>Grant in kind</p> <p>Of note, the Plan includes a suite of rules specific to Port structures (Rules 39, 40 and 41) which includes permitted activity Rule 39 [Port wharves or breakwaters and attached structures, maintenance, repair or alteration].</p> <p>In pre-hearing engagement, the submitter commented that it is not always evident which Rule applies to specific conditions and that a simpler cascade would assist Plan users and ensure that activities are managed consistently.</p> <p>The Hearing Panel notes that the standards, terms and conditions for Rule 39 are less directive than Rule 35. Rule 39 is also limited in its scope and only allows maintenance, repairs and alterations to the port wharves or breakwaters. Of note there are other structures in the Port coastal management area which may require maintenance and alteration. The Hearing Panel consider that this distinction between different Port structures in the notified Plan was not necessary and that maintenance, alteration and</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>extension of Port structures generally should be provided for as long as the appropriate standards, terms and conditions are met.</p> <p>The Hearing Panel recommends granting an alternative relief to that sought by the submitter. The Panel recommends including the Port within Rule 35 but also deleting Rule 39 to avoid unnecessary duplication between rules and confusion as to which rule applies to structures within the Port.</p> <p>The Hearing Panel recommends further consequential changes elsewhere in the Plan to simplify the Rules cascade for Port structures. These changes involve combining Rules 40 and 41 (and then deleting the now redundant Rule 41) to provide a similar drafting approach to Rule 35.</p>
32 – Port Taranaki	951	<p>Amend</p> <p>Submitter seeks amendment to Rule 35 of the Plan to clarify the rule to enable clear determination of minor alteration as a permitted activity. The submitter seeks that any consequential amendments required to the rules to give effect to this submission point are also recommended by Hearing Panel.</p>	<p>Accept</p> <p>The submitter has concerns whether this rule would allow Port Taranaki Ltd to replace displaced akmons on the breakwaters and other areas within the Port. In pre-hearing engagement the submitter explained that akmons are often moved about during storms and that periodic maintenance of the breakwaters and other areas of the Port is required to ensure that Port infrastructure is safeguarded. The submitter is concerned that Rule 35 as drafted would not allow this activity, despite the inclusion of the Port within the coastal management areas because of the potential for the replaced akmons to be slightly outside the original external dimensions of the structure.</p> <p>In response to the concerns of the submitter (and others) in pre-hearing engagement in relation to the application of the suite of maintenance, alteration and extension rules, the Hearing Panel recommends realigning the rules to more clearly identify the activities encompassed within each rule. Of note, the Hearing Panel has recommended changes to the definition of 'maintenance', 'alteration' and 'extension', as well as redrafting of the rules.</p> <p>The Hearing Panel considers the activity described by the submitter, and other similar activities, to be appropriate for a permitted activity, provided there are size thresholds to ensure that incremental creep does not occur over time through 'maintenance', 'repairs' and 'minor alterations'.</p> <p>The Hearing Panel further recommends amending Rule 35 to allow '<i>minor extensions</i>' that are incidental to a maintenance or alteration activity. This would address the example above, where it may be technically impossible to return the structure to its <u>exact</u> size/dimensions during maintenance. To prevent any perverse outcome or Plan users misusing the permitted activity</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>rule, the Hearing Panel recommends that Condition (a) include an extension limit of 10% of the original structure size.</p> <p>The amended Condition would read as follows:</p> <p><i><u>(a) Minor extensions are incidental to maintenance or alteration activities and the structure, including length, width and height, does not increase beyond 5% of the original size;</u></i></p>
41 – Te Korowai o Ngāruahine Trust	952	<p>Amend</p> <p>Submitter seeks amendment to Rule 35 of the Plan to require notification to iwi of any maintenance, repair or minor alteration work of lawfully established structures in the coastal marine area.</p>	<p>Grant in kind</p> <p>The Hearing Panel notes that standard, term and condition (h) requires those undertaking the activity to notify the Council at least 5 working days prior to the commencement of the activity. The Council has worked with iwi regarding permitted activities that require notification to establish a notification system that includes iwi authorities.</p> <p>The Hearing Panel recommends Rule 35 clarify this in an activity note to read as follows:</p> <p><i><u>Note (2): Iwi authorities that have requested to be informed of this activity will be advised by the Council.</u></i></p>
Further submissions – Transpower NZ Ltd (26)		Oppose	
43 – Royal Forest and Bird Protection Society	953	<p>Amend</p> <p>Submitter seeks amendment to the Activity Description of Rule 35 of the Plan to read:</p> <p><i>Structure maintenance, repair or minor alteration [...]</i></p>	<p>Accept</p> <p>The submitter is generally supportive of the provision allowing structures to be maintained so that they can be retained in good conditions and not cause adverse environmental effects, however, the submitter is confused by the exclusion of "repair" from the definition of maintenance which is commonly considered a component of maintenance. The submitter seeks amendments to the definitions of maintenance (submission point 1213) and minor alteration (submission point 1223) to address these concerns and that the Activity Description of Rule 35 be amended as requested.</p> <p>The Hearing Panel notes that a number of submitters have raised questions around the interpretation/application of the rules relating to maintenance, alterations, extensions. In response, the Panel recommends consequential amendments to better clarify what is meant by maintenance, alteration and extension and differentiate between related activities. The Panel recommends consequential amendments to relevant definitions and Rules 35 to 43.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel also recommends granting the relief sought by the submitter by amending relevant definitions so that the reader understands that repairs may be an aspect of maintenance activities or alteration activities.
45 – Powerco	954	<p>Amend</p> <p>Submitter seeks amendment to Rule 35(a) of the Plan to read:</p> <p>[...]</p> <p><i>(a) size of the structure, including length, width and height, does not increase beyond original size (except for existing communications cables or electricity transmission <u>or distribution</u> lines where these activities do not result in an increase in the design voltage and the new or altered cables or lines are not lower in height above the foreshore or seabed)</i></p> <p>OR</p> <p><i>(a) size of the structure, including length, width and height, does not increase beyond original size (except for existing communications cables or electricity transmission <u>or distribution</u> lines where these activities do not result in an increase in the design voltage <u>above 33kV</u> and the new or altered cables or lines are not lower in height above the foreshore or seabed)</i></p>	<p>Grant in kind</p> <p>The Hearing Panel recommends granting an alternative relief to that sought by the submitter that takes into account other amendments sought by other submitters to Condition (a).</p> <p>The recommended alternative amendment splits the existing condition into two separate conditions to improve readability and reads as follows:</p> <p><i>(aa) for existing communication cables, electricity transmission <u>or distribution</u> lines the activity <u>does not cause</u> an increase in the design voltage <u>above 33kV</u> and the new or altered cables or lines are not lowered in height above the foreshore or seabed; [...]</i></p> <p>The Hearing Panel notes that the submitter requested additional amendments to Condition (a) to allow more more than a 10% extension increase where a greater increase is required to meet the <i>Australian/New Zealand Standard for Overhead line design</i> (AS/NZS 7000:2016) or the <i>Electricity (Safety) Regulations 2010</i>. The Panel does not consider that this would be appropriate for a permitted activity rule noting that these standards could change over the life of the Plan and allow even more significant extensions in the future. The Panel recommends retaining amendments to Condition (a) as identified above.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	955	<p>Amend</p> <p>Submitter seeks amendment to Rule 35 of the Plan to:</p> <ul style="list-style-type: none"> delete reference in the Activity Description to “minor” include the Port coastal management area to this rule. 	<p>Accept in part</p> <p>The Hearing Panel recommends accepting in part the relief sought by the submitter.</p> <p>The Hearing Panel considers that the reference to “minor” is necessary as it reflects the recommended wording in Policy 36 [Maintenance, minor alteration or minor extension of existing structures]. There is a distinction between those alteration and extension activities that are minor (and can therefore comply with the standards, terms and conditions listed in Rule 35) and those which are considered more significant and will require a resource consent.</p> <p>The Hearing Panel notes that consequential amendments are also recommended to the Plan definitions including amending the existing</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>definition for “<i>maintenance</i>” and introducing new definitions for “<i>alteration</i>” and “<i>extension</i>”.</p> <p>The Hearing Panel recommends granting the relief sought by the submitter to include the Port within Rule 35, however, recommend deleting Rule 39 as a consequential amendment to ensure that there is no confusion around which rule applies to structures within the Port.</p> <p>Further to simplifying the Rules cascade for Port structures and ensuring consistency within the Plan with regards to the inclusion of the Port within Rule 35, the Hearing Panel recommend that Rule 41 is also deleted and that the provisions that are covered by Rule 41 are incorporated into Rule 40. This will provide a similar drafting approach to Rule 35 and ensures a simpler pathway for Port structures that do not comply with the standards, terms and conditions of Rule 35 as a permitted activity.</p>
47 – Fonterra	956	Support	Accept
		Retain Rule 35 of the Plan as notified.	Support noted. The Hearing Panel notes that amendments are recommended for Rule 35 which includes the inclusion of the Port coastal management area, and further clarification of the standards, terms and conditions.
59 – KiwiRail	957	Support	Accept
		Retain Rule 35 of the Plan as notified.	Support noted. The Hearing Panel notes that amendments are recommended for Rule 35 which includes the inclusion of the Port coastal management area, and further clarification of the standards, terms and conditions.
61 – Te Rūnanga o Ngāti Ruanui Trust	958	Amend	Accept in part
		<p>Submitter seeks amendment to the standards, terms and conditions of Rule 35 of the Plan to read:</p> <p>[...]</p> <p><i>(ca) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</i></p> <p><i>(cb) the activity does not have adverse effect on Schedules 1 and 2</i></p> <p><i>(c) for structures <u>and culturally significant areas</u> identified in Schedule 5 [Cultural and Historic heritage];</i></p> <p>[...]</p>	<p>The Hearing Panel notes that Rule 35 is providing for the ongoing maintenance, minor alteration or minor extension of already existing lawfully established structures in the coastal marine area. Subject to compliance with the standards, terms and conditions of the Rule, any adverse effects should be less than minor.</p> <p>The erection and placement of new structures are addressed in separate rules. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Relief sought in relation to Condition (ca) is unnecessary and uncertain for Plan users. The Rule is only providing for maintenance, repair or minor alterations to structures already

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(e) the extent of disturbance of the foreshore and seabed is limited to the minimum required to undertake the activity; <u>and does not adversely affect continued customary use within the area;</u></p> <p>[...]</p> <p>(g) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; <u>and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat] [...].</u></p>	<p>existing in the coastal marine area. The Hearing Panel notes that impacts on cultural sites of significance are already addressed in Condition (c). The effect of granting this relief regarding Appendix 2 would be to make this rule redundant as it requires no adverse effects (including less than minor) across the entire coastal marine area.</p> <ul style="list-style-type: none"> The Hearing Panel recommends declining the relief sought in relation to Condition (cb). The Panel note that the effect of granting this relief would also make this rule redundant as it again requires no adverse effects (including less than minor) across the whole coastal marine area, noting that Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Decline the relief sought in relation to Condition (c). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Reliefs sought in relation to Condition (e) are unnecessary. Such matters should already be addressed in Condition (c) of the Rule, which protects customary sites of significance. However, it is noted that any impacts on receiving water quality will be temporary and unlikely to be noticeable in natural prevailing conditions. Grant the relief in kind in relation to Condition (g). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species.
Rule 36 – Hard protection structure repair, alteration, extension or removal and replacement			
29 – Department of Conservation	959	<p>Support</p> <p>Retain Rule 36 of the Plan as notified.</p>	<p>Decline</p> <p>Support noted. However, the Hearing Panel notes recommendation to delete Rule 36 in order to improve the structure, maintenance, alteration and extension rules pathway. See submission point below for further clarification.</p>
Further submissions – Fonterra (47)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
32 – Port Taranaki	960	<p>Amend</p> <p>Submitter seeks amendment to Rule 36 of the Plan to provide for repair, alteration, extension or removal and replacement of existing lawfully established hard protection structures within the Port coastal management area as a controlled activity (rather than a discretionary activity) and provide a non-notification clause.</p> <p>The submitter seeks that any consequential amendments required to the rules to give effect to this submission point are also recommended by Hearing Panel.</p>	<p>Grant in kind</p> <p>The Hearing Panel notes that there are three aspects to this submission point which will be addressed separately, (1) maintenance, alteration and extension of hard protection structures, (2) removal and replacement of hard protection structures, and (3) notification.</p> <p>(1) In pre-hearing engagement, the submitter noted that the Port is an area that requires hard protection structures to ensure the safety of Port infrastructure as well as the ongoing operation of the Port which is considered regionally important and has a functional need to locate within the coastal marine area. Thus hard protection structures are expected to locate in this area and their maintenance and 'future proofing' should be appropriately provided for within the Plan.</p> <p>The submitter noted that hard protection structures are not always isolated structures and are generally integrated into other Port structures. The current regime would potentially require two consents to be sought (potentially with different activity classifications) for one activity: one to address the hard protection aspect of the structure and another to address the structure itself.</p> <p>The submitter further noted that the rules relating to maintenance, alteration, extension and removal and replacement of structures are confusing and unclear as to exactly which rule would apply for some activities.</p> <p>The Hearing Panel notes that the <i>New Zealand Coastal Policy Statement</i> discourages the use of hard protection structures and encourages the use of alternatives, however, it is the Hearing Panel's view that discouragement should only apply to the initial placement or erection of the structure and does not stretch to the maintenance and alteration of legally established hard protection structures.</p> <p>Providing an appropriate pathway for the maintenance and upgrading to ensure the 'future proofing' of hard protection structures is necessary for good environmental outcomes and personnel safety. Further to this, the Hearing Panel notes that maintenance and minor alteration of hard protection structures has already been provided for generally under Rule 35 as a permitted activity (hard protection structures are not excluded from the rule).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>For this reason, the Hearing Panel recommends an alternative relief that addresses the submitter's concerns to delete Rule 36 so that it is clear that maintenance, alteration or extension of hard protection structures are initially addressed under Rule 35 (for all structure types and coastal management areas as a permitted activity). If the activity cannot comply with Rule 35 then a higher regulatory process and consent will be required under Rules 37 and 37A (for network utility structures); and Rules 40 and 40A (for all Port structures). Other hard protection structure maintenance, alteration and extension that does not comply with Rule 35 is addressed under Rules 42 (discretionary) and 43 (non-complying) depending on the coastal management area involved.</p> <p>(2) In relation to the removal and replacement aspect of the submitter's concerns, the Hearing Panel notes that there are potentially two pathways within the Plan for this activity. Through Rule 38 [Structure removal and replacement] or through Rules 44, 45 and 46 [Structure removal and demolition] and then the appropriate structure erection or placement rule (Rules 18 to 25).</p> <p>It is vital that the Plan provide a single clear pathway for Plan users. For this reason, the Hearing Panel recommends deleting Rule 38 so that a Plan user will have to consult the appropriate removal rule as well as the appropriate placement or erection rule. This will ensure an appropriate level of regulatory control depending on the activity. Permitted, controlled and discretionary pathways are all possible depending on the activity specifics.</p> <p>(3) Regarding the non-notification clause, the Hearing Panel considers that this level of detail is not necessary to be included within a Plan and is more appropriately set out within the RMA sections 95A to 95G. In order to ensure alignment with the RMA, the Panel recommends an alternative relief that deletes reference to consenting notification requirements in the Plan rules.</p>
43 – Royal Forest and Bird Protection Society	961	<p>Amend</p> <p>Submitter seeks amendment to Activity Description of Rule 36 of the Plan to read: <i>Existing lawfully established hard protection structure <u>maintenance repair, minor alteration, extension</u> or removal and replacement [...]</i></p>	<p>Decline</p> <p>The submitter supports the intention to provide for structures to be retained in good repair, however, considers that the definitions for the activity described are uncertain. The submitter requests that the definitions for 'maintenance' and 'minor alteration' be amended as sought in submission points 1213 and 1223.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel recommends declining the relief sought by the submitter noting that it is proposed to delete Rule 36. The Panel recommends that existing lawfully established hard protection structures be addressed in the same manner as other lawfully established structures and that the inclusion of a specific rule for hard protection structures is confusing and unnecessary.
59 – KiwiRail	962	Amend Submitter seeks amendment to Rule 36 of the Plan to provide for repair of hard protection structures as a permitted activity (rather than a discretionary activity) OR Amend Rule 35 to allow hard protection structures to be maintained, repaired or have minor alterations.	No relief necessary The Hearing Panel notes that Rule 35 already provides for the maintenance of hard protection and other structures as a permitted activity, subject to compliance with the standards, terms and conditions. The Hearing Panel recommends that rules relating to maintenance, alterations, extensions and removal be reframed to more clearly differentiate between the respective activities based upon changes in their external dimensions and environmental effects. In addition to other consequential amendments to definitions, the Hearing Panel recommend that Rule 36 is deleted and that the rules relating to maintenance, alteration and extension of structures need not differentiate hard protection structures as separate from other types of structures. Instead, a simplified cascade is recommended which begins as Permitted (Rule 35) and then identifies network utility structures (37 and 37A) and port structures (40 and 40A) separately. The 'catch-all' provisions (Rules 42 and 43) will address any activities not covered by this framework.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
61 – Te Rūnanga o Ngāti Ruanui Trust	963	Amend Submitter seeks amendment to the standards, terms and conditions of Rule 36 of the Plan to read: <i><u>(a) repair, alteration, extension or removal of structure and discharge does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment</u></i> <i><u>(b) repair, alteration, extension or removal of structure and discharge complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></i> <i><u>(c) repair, alteration, extension or removal of structure and discharge is consistent with iwi management plan.</u></i> AND Include the following notification note:	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes its previous recommend to delete Rule 36. The Panel recommends that existing lawfully established hard protection structures be addressed in the same manner as other lawfully established structures and that the inclusion of a specific rule for hard protection structures is confusing and unnecessary.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>Resource consent applications under this Rule will be notified to tangata whenua.</u>	
Rule 37 – Network utility structure, repair, alteration or extension			
15 – Surfbreak Protection Society	964	<p>Other</p> <p>Submitter seeks that there be no impacts to surf breaks and that key surfing groups and representative groups be part of any limited notification for discharge or disturbance consent applications with the potential to impact on surf breaks or coastal water.</p>	<p>No relief necessary</p> <p>The submitter's comments are noted and have been previously addressed in submission point 446 relating to surfing policies. Policy 19 would be considered as part of any resource consent application under this Rule.</p> <p>The Hearing Panel notes that matters relating to affected and interested party status and limited notification are addressed separately in accordance with the Council's consenting standard operating procedures which are in accordance with the requirements for notification under sections 95A to 95G of the RMA.</p>
26 – Transpower NZ Ltd	965	<p>Amend</p> <p>Submitter seeks amendment to Rule 37 of the Plan to delete reference to National Environmental Standards for Electricity Transmission Activities: [...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).</p>	<p>Accept</p> <p>The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.</p>
29 – Department of Conservation	966	<p>Amend</p> <p>Submitter seeks amendment to Rule 37 of the Plan to include a provision about limiting the size of any extension of the structure.</p>	<p>Accept</p> <p>The Hearing Panel recommends accepting the amendments requested relating to an extension limit. The Hearing Panel has considered other similar conditions in other regional coastal plans and consider a 10% extension limit to be appropriate provided other environmental concerns are addressed.</p> <p>The new standard, term and condition reads as follows: <u>(aa) the structure envelope, including length, width and height does not increase beyond 10% of the original size within a five year period; [...]</u></p> <p>The Hearing Panel also recommends that, for the purposes of consistency, a similar condition be included in Rule 40 (Controlled).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
30 – First Gas Ltd	967	Amend Submitter seeks amendment to Rule 37 of the Plan to make network utility pipeline repair, alteration or extension a permitted activity (rather than a non-complying activity) AND Extend the Rule to include Outstanding Value coastal management areas.	Grant in kind In response to submitters, the rules relating to maintenance, alteration and extension of structures have been reframed to more clearly delineate between the respective activities. The Hearing Panel recommends granting the relief in kind by including a new Restricted Discretionary rule addressing network utilities, including those in Outstanding Value areas, not covered by Rule 35 and 37. The Hearing Panel notes that most maintenance and minor alteration activities associated with network utilities can be addressed as a permitted activity under Rule 35. Other alteration and extension activities associated with network utilities can be addressed under Rule 37. The Hearing Panel notes that, for those activities not covered by Rule 35 and 37, would be addressed under a new rule, Rule 37A, whereby alteration and extension of network utilities can be addressed as a restricted discretionary activity. This is part of a framework that better recognises and provides for regionally important network utilities.

59 – KiwiRail	973	<p>Amend</p> <p>Submitter seeks amendment to Rule 37 of the Plan to remove the (a) to (e) Activity Descriptions on the type of network utility structure,</p> <p>OR</p> <p>Include existing railway assets as new (f).</p>	<p>Accept</p> <p>The Hearing Panel believes railway assets in the coastal marine area are likely to be bridges or access structures. The Hearing Panel recommends amending Rule 37 to include bridges, wharves and access structures for network utilities. The Hearing Panel therefore recommends amending the gateway clause (a) to read as follows:</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>(a) <u>a bridge, wharf or access structure, including any attached pipelines or cables or lines that are buried or attached;</u> [...]</p> <p>The Hearing Panel notes that this amendment aligns with equivalent provisions in the operative Freshwater Plan.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	974	<p>Amend</p> <p>Submitter seeks amendment to Rule 37 of the Plan to include new and amended standards, terms and conditions to read:</p> <p>[...]</p> <p>(c) <i>activity does not have an adverse effect on the values associated with <u>cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage];</u></i></p> <p><u>(ca) the activity does not have adverse effect on Schedules 1 and 2;</u></p> <p><u>(cb) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</u></p> <p><u>(d) the structure does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]</u></p> <p><u>(e) activity does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></p> <p><u>(f) activity complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></p> <p><u>(g) activity is consistent with iwi management plan.</u></p>	<p>Accept in part</p> <p>The Hearing Panel notes that Rule 37 is providing for the ongoing maintenance, repair or minor alterations to already existing lawfully established network utility structures in the coastal marine area. Subject to compliance with the standards, terms and conditions of the Rule, any adverse effects should be less than minor.</p> <p>The erection and placement of new structures are addressed in separate rules. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (c). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (ca). The Hearing Panel notes that the effect of granting this relief would also make this rule redundant as it requires no adverse effects (including less than minor) across the whole coastal marine area, noting that Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Decline the relief sought in relation to Condition (cb) as unnecessary and uncertain for Plan users. The Rule is only providing for maintenance, repair or minor alterations to network utility structures already existing in the coastal marine area. Hearing Panel note that impacts on cultural sites of significance are already addressed in Condition (c). The effect of granting this relief would be to make this rule redundant as it requires no adverse effects (including less than minor).
Further submissions – Climate Justice Taranaki Inc (21), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<ul style="list-style-type: none"> Grant the relief in kind in relation to Condition (d). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species. Reliefs sought in relation to Condition (e) are unnecessary. Such matters should already be addressed in Condition (c) of the Rule, which protects customary sites of significance. However, it is noted that any impacts on receiving water quality will be temporary and unlikely to be noticeable in natural prevailing conditions. Decline the relief sought in relation to Condition (f) and (g) as being uncertain in terms of their application and given the details as to managing effects on water quality and monitoring are already identified in the rule as matters of control.
61 – Te Rūnanga o Ngāti Ruanui Trust	975	<p>Amend</p> <p>Submitter seeks amendment to the control and notification column for Rule 37 of the Plan to read:</p> <p><i>Control is reserved over:</i></p> <p>[...]</p> <p>(e) effects on water quality <u>and mauri values</u>;</p> <p>(f) effects on ecological values;</p> <p>(g) effects on historic, cultural and amenity values;</p> <p>(hi) effects on surf breaks;</p> <p>(i) effects of occupation on public access;</p> <p>(j) effects on navigation;</p> <p>(k) effects of noise and light;</p> <p><u>(l) effects on Cultural Zone (referred to in Spatial Plan)</u>;</p> <p>(m) monitoring <u>(including tangata whenua indicators referred to in the tangata whenua monitoring plan)</u> and information requirements;</p> <p>(n) duration of consent; and</p> <p>(o) review of consent conditions.</p> <p>Resource consent applications under this Rule will not be publicly notified but may be limited notified <u>be notified to tangata whenua</u>.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. The suggested changes seem to be mixing jurisdictional, policy and operational matters and introducing a level of specificity that is not considered appropriate or necessary for a regional plan. Most of the changes sought are a subset of matters that have already been provided for while the submitter has also introduced some new concepts such as a cultural zone and a spatial plan that do not fit within the Proposed Plan framework. There is also a 'requirement' to be consistent with iwi management plans, while the submitter is silent on how other planning documents, by other parties, might fit within this framework.</p> <p>The Hearing Panel notes that this activity is already subject to the General Policies 1 to 21 of which Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] are particularly relevant. The Hearing Panel further notes that there will be an opportunity to develop an agreed framework and operational detail for implementing the Plan as part of any Mana Whakahohe a Rohe agreement with the submitter.</p>

		[...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	
29 – Department of Conservation	981	Amend Submitter seeks amendment to Rule 38 of the Plan to include new standards, terms and conditions addressing: <ul style="list-style-type: none"> • how the use of vehicles and machinery in the coastal environment will be avoided where possible, and minimised/effects mitigated where necessary (including taking the shortest and least sensitive route) • the requirement for construction equipment including spoil, litter or equipment to be removed within 24 hours of completion of any works • the prohibition of any refuelling or fuel storage occur within the coastal environment and that methods should be employed to avoid any fuel spillage. 	Decline The Hearing Panel recommends declining the relief sought by the submitter. Similar type conditions have been considered as part of the Plan review process and were not deemed to be not necessary with the effects of those activities being addressed in the standards, terms and conditions of the Rule. Notwithstanding the above, in response to other submitters' requests, the Hearing Panel considers that Rule 38 is unnecessary as it addresses matters already covered through a different rule pathway. The Hearing Panel recommends deleting Rule 38 to avoid confusion for Plan users and for resource users to instead rely on Rules 44, 45 and 46 for the removal aspect of the structure, and Rules 18 to 34 for the 'replacement' aspects of the structure.
Further submissions – Climate Justice Taranaki Inc (21)		Support	
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	
30 – First Gas Ltd	982	Amend Submitter seeks that network utility pipeline removal and replacement within coastal management areas: Outstanding Value and Estuaries Unmodified, Estuaries Modified and Port be classified as a permitted activity and be included under Rule 38 (or under a separate rule).	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that the Activity Description of Rule 38 deliberately excludes petroleum production installations and pipelines because of the higher environmental risks involved.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Oppose	The Hearing Panel further notes that rules relating to maintenance, alterations, extensions and removal are recommended to be reframed to more clearly differentiate between the respective activities.
Further submissions – Powerco (45)		Neutral	In response to other submitters, the Hearing Panel considers that Rule 38 is unnecessary as it addresses matters already covered through a different Rule pathway. The Hearing Panel recommends deleting Rule 38 to avoid confusion for Plan users and for resource users to instead rely on Rules 44, 45 and 46

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			for the removal aspect of the structure, and Rules 18 to 34 for the 'replacement' aspects of the structure.
40 – Te Rūnanga o Ngāti Mutunga	983	<p>Amend</p> <p>Submitter opposes permitting the removal or replacement of existing lawfully established structures in the coastal marine area and seek that such activities be a discretionary activity (rather than a permitted activity).</p>	<p>Grant in kind</p> <p>The Hearing Panel recommends granting in kind the relief sought by the submitter.</p> <p>In response to other submitters, the Hearing Panel recommends deleting Rule 38, which permits the removal and replacement of lawfully established structures. To better clarify and differentiate between the different structure activities, the Hearing Panel considers Rules 44, 45 and 46 to adequately provide for the removal aspect. In relation to the structure replacement, Rules 18 to 34 would be considered as part of the "placement". Together these rules provide a broad suite of regulatory control from permitted activity to non-complying activity depending on the significance of effects.</p>
41 – Te Korowai o Ngāruahine Trust	984	<p>Amend</p> <p>Submitter seeks amendment to Condition (i) of Rule 38 of the Plan to read: <i>(i) structure is not located within any historic heritage site identified in Schedule 5A and B [Historic heritage] or any other archaeological site; [...]</i></p>	<p>Grant in kind</p> <p>The Hearing Panel notes that, in response to other submitters, the Panel recommends deleting Rule 38 as it addresses matters already covered through a different Rule pathway. The Panel recommends deleting Rule 38 to avoid confusion for Plan users and for resource users to instead rely on Rules 44, 45 and 46 for the removal aspect of the structure, and Rules 18 to 34 for the 'replacement' aspects of the structure</p> <p>Notwithstanding the above, the Hearing Panel recommends that the relevant standards, terms and conditions are amended in the other rules to ensure that they reference Schedule 5A and B as requested by the submitter.</p>
43 – Royal Forest and Bird Protection Society	985	<p>Amend</p> <p>Submitter seeks amendment to Rule 38 of the Plan by:</p> <ul style="list-style-type: none"> deleting and excluding Outstanding Value coastal management areas from the rule deleting and excluding the "replacement" of lawfully established structures from the rule (and instead providing for the replacement of existing structures via rules for erection and placement of new structures 	<p>Accept in part</p> <p>The Hearing Panel recommends accepting in part, the relief sought by the submitter. The Panel considers that Rule 38 is confusing as removal of structures is already addressed under Rules 44, 45 and 46. In order to assist Plan users, the Panel recommends deleting Rule 38 and relying on Rules 44, 45 and 46 for the removal aspect of the activity and to (as requested by the submitter) to provide for the replacement of existing structures through the appropriate structure placement and erection rules (Rules 18 to 34).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		OR Alternatively provide for replacement of lawfully established structures as a Restricted Discretionary rule (rather than a permitted activity) and include matters for discretion that address: effects on natural character and natural features and landscapes; effects on indigenous biodiversity; generation of noise; location; and whether the replacement structure maintains the form of the original structure with no increase in length, width or height, or increase in adverse effects.	In relation to excluding Outstanding Value coastal management areas it is noted that when considering whether there are any adverse effects on the characteristics and qualities of 'outstanding areas', it must be recognised that many areas contain ongoing use and development that was present when the areas were first identified as outstanding. Removal and replacement of structures in accordance with the standards, terms and conditions of the appropriate rules will have only minor and temporary effects.
Further submissions – Climate Justice Taranaki Inc (21)		Support	
47 – Fonterra	986	Support Retain Rule 38 of the Plan as notified.	
Further submissions – Port Taranaki Ltd (32)		Support in part	Decline Support noted. However, the Hearing Panel notes that Rule 38 is recommended to be deleted in response to other submitter's requests due to duplication of Plan provisions.
61 – Te Rūnanga o Ngāti Ruanui Trust	987	Amend Submitter seeking amendment to Rule 38 of the Plan to include new and amended standards, terms and conditions to read: [...] <i>(i) structure is not located within <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage] or any other archaeological site;</i> <i><u>(ia) structure is not located within Schedules 1 and 2;</u></i> <i><u>(ib) structure does not adversely affect the suitability of the receiving area for customary use;</u></i> <i><u>(ic) structure is not located within any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</u></i> <i><u>(j) structure is not located at any site identified in Schedules 5 [Sites of geological significance];</u></i> <i>(k) the structure does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; <u>and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat].</u></i> [...]	Accept in part The Hearing Panel notes that, in response to other submitters, the Panel recommends deleting Rule 38 as it addresses matters already covered through a different Rule pathway. The Hearing Panel recommends deleting Rule 38 to avoid confusion for Plan users and instead rely on Rules 44, 45 and 46 for the removal aspect of the structure, and Rules 18 to 34 for the 'replacement' aspects of the structure. The Hearing Panel notes that, in relation to the requests made by the submitter, consideration of the points raised is detailed in other submission points made by the submitter in regards to Rules 44 to 46 and 18 to 34.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response

NEW Rule 38A – Existing lawfully established structure removal and replacement in Outstanding Value areas			
43 – Royal Forest and Bird Protection Society	988	Amend Submitter seeks amendment to the Plan to include a new Rule that would provide for the removal of existing lawfully established structures in Outstanding Value coastal management areas as a controlled activity (rather than a permitted activity provided for in Rule 38).	Decline In response to other submitters, the Hearing Panel considers that Rule 38 is unnecessary as it addresses matters already covered through a different Rule pathway. The Panel recommends deleting Rule 38 to avoid confusion for Plan users and instead rely on Rules 44, 45 and 46 for the removal aspect of the structure, and Rules 18 to 34 for the 'replacement' aspects of the structure. The Hearing Panel suggests that this relief provides a more certain pathway for Plan users for the replacement of structures which includes permitted, controlled and discretionary activity classifications as well as additional standards, terms and conditions. The Hearing Panel does not believe it necessary to exclude Outstanding Value coastal management areas from the permitted activity pathway noting that when considering whether there are any adverse effects on the characteristics and qualities of 'outstanding areas', it must be recognised that many areas contain ongoing use and development that was present when the areas were first identified as outstanding and which continue to be identified as 'outstanding'.
Rule 39 – Existing lawfully established Port structure maintenance and repair			
40 – Te Rūnanga o Ngāti Mutunga	989	Amend Submitter seeks amendment to Rule 39 of the Plan to make the maintenance, repair or alteration of structures in the Port a controlled activity (rather than a permitted activity).	Decline The Hearing Panel notes that Rule 39 relates to the maintenance, repair or alteration of existing lawfully established structures in the Port. It is similar in kind to existing rules in the current Plan relating to the Port. The Hearing Panel notes that the Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the ongoing maintenance, repair and alteration of Port structures. Subject to complying

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>with the standards, terms and conditions that include that the structure does not increase beyond original size, in accordance with Policy 6 the Council should seek to provide for such activities. The Panel sees no net environmental benefit to imposing consenting and compliance costs on the Port by making the activity a controlled activity.</p> <p>Notwithstanding the above, the Hearing Panel recommends deleting Rule 39 and addressing the matters covered by Rule 39 under Rule 35. This addresses concerns raised by other submitters relating to issues of potential duplication and overlap between rules as well as wider issues relating to providing a simpler cascade for Plan users in relation to the maintenance, alteration and extension rules framework.</p>
43 – Royal Forest and Bird Protection Society	990	<p>Amend</p> <p>Submitter seeks amendment to the Activity Description of Rule 39 of the Plan to read:</p> <p><i>Existing lawfully established structure maintenance repair, or <u>minor</u> alteration where the activity [...]</i></p>	<p>Accept in kind</p> <p>The Hearing Panel recommends granting the relief sought by the submitter in kind.</p> <p>The Hearing Panel recommends deleting Rule 39 and addressing the matters covered by Rule 39 under Rule 35. This addresses concerns raised by other submitters relating to issues of potential duplication and overlap between rules as well as wider issues relating to providing a simpler cascade for Plan users in relation to the maintenance, alteration and extension rules framework. Notwithstanding the above, the Panel notes that the amendments sought by the submitter have been provided in Rule 35 as requested under submission point 953.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	991	<p>Amend</p> <p>Submitter seeks amendment to the Activity Description of Rule 39 of the Plan to read:</p> <p><i>Existing lawfully established structure maintenance, repair or alteration where the activity relates to that part of the wharves or breakwaters that is normally above the water surface including any attached structures, and relates directly to port company operations and any associated: [...]</i></p>	<p>Grant in kind</p> <p>The Hearing Panel recommends granting the relief in kind.</p> <p>The Hearing Panel notes that amendments made to Rule 35 have made Rule 39 redundant due to duplication of provisions. As a result, Rule 39 is recommended to be deleted.</p> <p>The Hearing Panel notes that the concerns raised by the submitter and request to broaden the scope of Rule 39 to all Port operations has already been provided for under Rule 35.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
58 – Te Atiawa	992	Support	Decline
		Retain Rule 39 of the Plan as notified.	Support for Rule 39 is noted. However, Rule 39 is recommended to be deleted in order to address the concerns of other submitters.
Rule 40 – Existing lawfully established Port structure maintenance and repair			
40 – Te Rūnanga o Ngāti Mutunga	993	Amend	Decline
		Submitter seeks amendment to Rule 40 of the Plan to make the maintenance, repair or alteration of structures in the Port where it does not comply with Rule 39 a discretionary activity (rather than a controlled activity).	<p>The Hearing Panel notes that Rule 40 relates to the maintenance, repair or alteration of existing lawfully established structures in the Port where the activity does not come within or comply with Rule 39.</p> <p>The Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the ongoing maintenance, repair and alteration of Port structures. Subject to complying with the standards, terms and conditions it is recommended that the activity be allowed to get a resource consent as a controlled activity to provide some business certainty in accordance with Policy 6. The Hearing Panel sees no net environmental benefit to reducing business certainty for the Port (in terms of whether a consent would be granted or not) by making the activity a discretionary activity.</p> <p>Notwithstanding the above, the Hearing Panel notes recommendations to amend the Activity Description and include additional standards, terms and conditions to ensure adverse effects can be appropriately considered and managed as a controlled activity.</p>
43 – Royal Forest and Bird Protection Society	994	Amend	Accept in part
		Submitter seeks amendment to Rule 40 of the Plan by: <ul style="list-style-type: none">including a new condition that the activity will not have adverse effects on the adjacent Outstanding Value areaamending the matters for control to include consideration of effects on indigenous biodiversity and natural character.	<p>The Hearing Panel suggests that the current Rule, which applies only to the 'Port' coastal management area, and which has conditions whereby the size of the structure does not increase from its original size and where the activity cannot impact on significant indigenous biodiversity (which includes not just within the Port but also the Sugar Loaf Islands), already address potential impacts on adjacent areas. The Hearing Panel does not believe any change is necessary or appropriate.</p> <p>With regards to amending the matters of control to explicitly address indigenous biodiversity and natural character, the Hearing Panel agrees. The Panel recommends replacing the term “ecological values” with “natural</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>character, features and landscapes</i> " and " <i>indigenous biodiversity</i> " to clarify its policy intent.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	995	Support	Accept
		Retain Rule 40 of the Plan as notified.	Support noted but note the inclusion of additional standards, terms and conditions.
		Support	
58 – Te Atiawa	996	Support	Accept
		Retain Rule 40 of the Plan as notified.	Support noted but note the inclusion of additional standards, terms and conditions.
Rule 41 – Existing lawfully established Port repair, alteration and extension			
15 – Surfbreak Protection Society	997	Other	No relief necessary
		Submitter seeks that there be no impact on surf breaks.	Submitter's comments are noted and have been previously addressed in submission point 448 relating to surfing policies. Policy 19 would be considered as part of any resource consent application under this Rule.
40 – Te Rūnanga o Ngāti Mutunga	998	Amend	Decline
		Submitter seeks amendment to Rule 41 of the Plan to make the maintenance, repair or alteration of structures in the Port that does not come within or comply with other related rules a discretionary activity (rather than a controlled activity).	The Hearing Panel recommends declining the relief sought. The Hearing Panel notes that the Port is already a highly modified environment that provides a national and regionally important function whereby the movement of goods is dependent upon the ongoing maintenance, repair and alteration of Port structures. Subject to complying with the standards, terms and conditions, in accordance with Policy 6 the Council seeks to provide for such activities. The Council sees no net environmental benefit to reducing business certainty for the Port (by the potential of declining a resource consent application) by making the activity a discretionary activity. Notwithstanding the above, the Hearing Panel notes that in order to simplify the rules cascade relating to structure maintenance, alteration and extension Rules 40 and 41 have been merged and additional standards, terms and
Further submission – Port Taranaki Ltd (32)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			conditions inserted to address environmental effects to ensure the broader consideration of environmental effects.
58 – Te Atiawa	999	Amend Submitter seeks amendment to Rule 41 of the Plan to notify Iwi as an affected party.	No relief necessary The Hearing Panel considers that no relief is necessary. The Hearing Panel notes that in order to simplify the rules cascade relating to structure maintenance, alteration and extension Rules 40 and 41 have been merged and additional standards, terms and conditions inserted to address environmental effects to ensure the broader consideration of environmental effects. The Hearing Panel further notes that, as part of this Coastal Plan review process, and in relation to 'sites of significance' to Māori (refer Condition (c)), Council has already agreed to recognise iwi, subject to conditions, as an affected party for all resource consent applications. There will be further opportunity to set consultation requirements and expectations as part of the development of Mana Whakahono a Rohe agreements.
Rule 42 – Other structure repair, extension, removal or replacement			
6 – Trans-Tasman Resources Ltd	1000	Support Retain Rule 42 of the Plan as notified.	Accept Support noted. Rule 42 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
26 – Transpower NZ Ltd	1001	Amend Submitter seeks amendment to Rule 42 of the Plan to delete reference to National Environmental Standards for Electricity Transmission Activities: <i>[...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).</i>	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.
32 – Port Taranaki	1002	Amend Submitter seeks amendment to Rule 42 of the Plan to: <ul style="list-style-type: none"> insert a new rule specifically for the Port coastal management area and in respect to Port activities providing controlled activity status for other 	Accept in part The Hearing Panel recommends accepting in part the relief requested by the submitter. 			control/discretion" and deleting any references to consenting notification requirements in the rules (noting relevant notification requirements are set out in sections 95A to 95G of the RMA).
Rule 44 – Structure removal or demolition			
6 – Trans-Tasman Resources Ltd	1012	Support Retain Rule 44 of the Plan as this rule appropriately recognises the benefits of enabling removal of structures as a permitted activity from the coastal marine area when they are no longer required.	Accept Support noted. Rule 44 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
26 – Transpower NZ Ltd	1013	Amend Submitter seeks amendment to Rule 44 of the Plan to delete reference to the <i>National Environmental Standards for Electricity Transmission Activities</i> : [...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.
29 – Department of Conservation	1014	Amend Submitter seeks amendment to Rule 44 of the Plan to include new conditions addressing: <ul style="list-style-type: none"> how the use of vehicles and machinery in the coastal environment will be avoided where possible, and minimised/effects mitigated where necessary (including taking the shortest and least sensitive route) the requirement for construction equipment including spoil, litter or equipment to be removed within 24 hours of completion of any works the prohibition of any refuelling or fuel storage occur within the coastal environment and that methods should be employed to avoid any fuel spillage. 	Accept in part At the hearing of submissions, the submitter presented alternative wording suggestions requiring any disturbance to be restored to its previous state 48 hours after the activity has been completed. The Hearing Panel recommends amending Condition (a) to require plan users to minimise the impact of their disturbance activities and to restore the disturbed area to its previous state. The amended Condition would read as follows: <i>(a) the extent of disturbance of the foreshore and seabed is limited to the minimum required to undertake the activity and is restored to its previous state 48 hours following the completion of the activity; [...]</i> The submitter also requested an additional amendment to avoid storing fuel in the coastal marine area and to minimise the extent of any contaminant entering the coastal marine area. The Hearing Panel notes the relief sought by the submitter is problematic in that that fuel storage includes fuel stored inside vehicles, such as boats, and the relief sought would preclude their use. However, the Panel believes the risk sought to be addressed by the submitter
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>relates to avoiding fuel spills and, in the event of an oil spill, there are a variety of management/enforcement actions available to the Council. Of note, the rule's activity description includes discharges of sediment only as an associated activity (the discharges of other contaminants are not provided for under this rule).</p> <p>The Hearing Panel consider that the amendment requested is not necessary as the only discharge permitted through the rule is the discharge of sediment incidental to the removal activity.</p>
41 – Te Korowai o Ngāruahine Trust	1015	Amend Submitter seeks amendment to Rule 44 of the Plan to require notification to iwi of any structure removal or demolition work in the coastal marine area.	Accept In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the rule includes a notification requirement to the Council under standard, term and condition (g). The Council have already agreed to pass the notification information onto interested iwi authorities. The Hearing Panel recommends amending the rule to include an additional note under the Activity Description to indicate this for Plan users.

58 – Te Atiawa	1018	Amend Submitter seeks amendment to Rule 44 of the Plan by changing the activity classification to controlled activity (rather than a permitted activity).	Decline The Hearing Panel notes that Rule 44 relates to the removal or demolition of a structure in the coastal marine area not involving the use of explosives and includes a suite of standards, terms and conditions such that the environmental effects of the activity should be less than minor and transitory. The Hearing Panel does not consider it appropriate to require a consent to remove or demolish a structure in the coastal marine area, provided the

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>standards, terms and conditions can be met. The Hearing Panel notes that the removal of structures in the coastal marine area is generally a positive environmental outcome that contributes to the enhancement of natural character plus other values.</p> <p>The Council requires that the person undertaking the activity notify the Council under Condition (g) at least five working days before commencing the activity so that the Council can assess and confirm that the activity is appropriate and that any adverse effects arising from the activity should be less than minor and transitory.</p> <p>Council sought seek to provide for such activities. The Council sees no net environmental benefit to imposing consenting and compliance costs on the Port by making the activity a controlled activity.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	1019	<p>Amend</p> <p>Submitter seeks amendment to Rule 44 of the Plan to include new and amended standards, terms and conditions to read:</p> <p>[...]</p> <p><i>(e) activity is not located within <u>cultural and</u> historic heritage identified in Schedule 5 [Cultural and Historic heritage] or any other archaeological site;</i></p> <p><i><u>(ea) activity is not located within Schedules 1 and 2;</u></i></p> <p><i><u>(eb) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</u></i></p> <p><i><u>(ec) activity does not adversely affect the suitability of the receiving area for customary use;</u></i></p> <p><i><u>(f) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]. [...]</u></i></p>	<p>Accept in part</p> <p>The Hearing Panel notes that Rule 44 relates to the removal or demolition of a structure in the coastal marine area not involving the use of explosives (with some exceptions).</p> <p>The submitter is seeking amendment to Rule 44 of the Plan to include new and amended standards, terms and conditions. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (e). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (ea). The Hearing Panel notes that the effect of granting this relief would also make this rule redundant as Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Decline relief sought in relation to Condition (eb) as unnecessary and uncertain for Plan users. The Rule is only providing for the removal and replacement of structures already existing in the coastal marine area. The Hearing Panel notes that impacts on cultural sites of significance are already addressed in Condition (e).
Further submissions – Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<ul style="list-style-type: none"> Reliefs sought in relation to Condition (ec) are unnecessary. Such matters should already be addressed in Condition (i) of the Rule, which protects customary sites of significance. However, it is noted that any impacts on receiving water quality or disturbances to the foreshore and seabed will be temporary and unlikely to be noticeable in natural prevailing conditions. Grant the relief in kind in relation to Condition (f). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species in new standard, term and condition (fa).
Rule 45 – Structure removal or demolition			
26 – Transpower NZ Ltd	1020	Amend Submitter seeks amendment to Rule 45 of the Plan to delete reference to the <i>National Environmental Standards for Electricity Transmission Activities</i> : [...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)) .	Accept The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.
29 – Department of Conservation	1021	Amend Submitter seeks amendment to Rule 45 of the Plan to read: [...] and the activity does not comply with Rule 45 44 [...].	Accept The Hearing Panel recommends granting the relief sought by the submitter.
32 – Port Taranaki	1022	Amend Submitter seeks amendment to Rule 45 of the Plan to read [...] and the activity does not comply with Rule 45 44 [...].	Accept The Hearing Panel recommends granting the relief sought by the submitter.
43 – Royal Forest and Bird Protection Society	1023	Amend Submitter seeks amendment to Rule 45 of the Plan to delete and exclude the Outstanding Value, Estuary Unmodified and Estuary Modified coastal management areas from the Rule.	Grant in kind The Hearing Panel notes that Rule 45 relates to the removal or demolition of a structure in the coastal marine area. However, it does allow the use of explosives. The Hearing Panel does not consider it appropriate to make the removal or demolition of a structure in Outstanding Value, Estuary Unmodified and Estuary Modified coastal management areas a Discretionary or non-

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>complying activity (for which a resource consent might be refused). The Hearing Panel notes that the removal of structures in the coastal marine area is generally a positive environmental outcome that contributes to the enhancement of natural character plus other values. It is particularly positive in the aforementioned areas where people might be seeking the enhancement or restoration of natural values.</p> <p>The submitter is concerned about the effects of using explosives on indigenous marine species noting that this may not be appropriate in all cases. The Hearing Panel agrees but recommends an alternative relief involving the inclusion of a new standards, terms and condition addressing adverse effects on significant indigenous biodiversity and taonga species under new Conditions (aa) and (ab). Such matters can then be considered through the resource consent process and may result in limitations in location, method, and timing of works.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1024	Support	Accept
		Retain Rule 45 of the Plan as notified.	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	Support noted. Rule 45 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.
58 – Te Atiawa	1025	Amend	Grant in kind
		Submitter seeks amendment to Rule 45 of the Plan by changing the activity classification to discretionary activity (rather than a controlled activity).	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	<p>The Hearing Panel notes that Rule 45 relates to the removal or demolition of a structure in the coastal marine area.</p> <p>The Hearing Panel does not consider it appropriate to make the removal or demolition of a structure in the coastal marine area a discretionary or non-complying activity (for which a resource consent might be refused). Hearing Panel note that the removal of structures in the coastal marine area is generally a positive environmental outcome that contributes to the enhancement of natural character plus other values.</p> <p>However, the submitter is concerned about the effects of using explosives on sites of significant ecological value and historic heritage and suggest as a discretionary activity they can be involved in the decision making process and there will be consent monitoring.</p> <p>The Hearing Panel notes that, as part of this Coastal Plan review process, and in relation to 'sites of significance' to Māori (refer Condition (a)), Council</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>has already agreed to recognise iwi, subject to conditions, as an affected party for all resource consent applications having an impact on scheduled sites of significance. There will be further opportunity to set consultation requirements and expectations as part of the development of Mana Whakahono a Rohe agreements. The Panel further notes that as a controlled activity, one of its matters of control include information and monitoring requirements.</p> <p>Notwithstanding the above, the Hearing Panel recommends an alternative relief involving the inclusion of a new condition addressing adverse effects on significant indigenous biodiversity and taonga species under new Conditions (aa) and (ab). Such matters can then be considered through the resource consent process and may result in limitations in location, method, and timing of works or impose requirements to notify and consult.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	1026	<p>Amend</p> <p>Submitter seeks amendment to Rule 45 of the Plan to include new and amended standards, terms and conditions to read:</p> <p>[...]</p> <p><i>(a) activity is not located within <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage] or any other archaeological site;</i></p> <p><i>(b) activity is not located within Schedules 1 and 2;</i></p> <p><i>(c) activity does not adversely affect the suitability of the receiving area for customary use;</i></p> <p><i>(d) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant species and ecosystems]; and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat];</i></p> <p><i>(e) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</i></p> <p><i>(f) activity does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</i></p> <p><i>(g) activity complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</i></p>	<p>Accept in part</p> <p>The submitter is seeking amendment to Rule 45 of the Plan to include new and amended standards, terms and conditions. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (a). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (b). The Hearing Panel notes that the effect of granting this relief would also make this rule redundant as Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Decline relief sought in relation to Condition (c) and (e) as unnecessary and uncertain for Plan users. The Rule is only providing for the removal and replacement of structures already existing in the coastal marine area. The Hearing Panel notes that impacts on cultural sites of significance are already addressed in Condition (a)

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>(h) activity is consistent with iwi management plan.</u>	<ul style="list-style-type: none"> Grant the relief in kind in relation to Condition (d). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species (new Condition (ab)). Decline the relief sought in relation to Condition (f), (g) and (h) as being uncertain in terms of their application and given the details as to managing effects on water quality and monitoring are already identified in the rule as matters of control.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	1027	<p>Amend</p> <p>Submitter seeks amendment to the Control/notification column for Rule 45 of the Plan to read:</p> <p><i>Control is reserved over:</i></p> <p>[...]</p> <p>(d) effects on water quality <u>and mauri values</u>;</p> <p>(e) effects on ecological values;</p> <p>(f) effects on historic, cultural and amenity values;</p> <p>(g) effects on surf breaks;</p> <p>(h) effects of occupation on public access;</p> <p>(i) effects on navigation;</p> <p>(j) effects of noise and light;</p> <p><u>(k) effects on Cultural Zone (referred to in Spatial Plan):</u></p> <p>(l) monitoring <u>(including tangata whenua indicators referred to in the tangata whenua monitoring plan)</u> and information requirements;</p> <p>(m) duration of consent; and</p> <p>(n) review of consent conditions.</p> <p>Resource consent applications under this Rule will not be publicly notified but may be limited notified <u>be notified to tangata whenua</u>.</p>	<p>Decline</p> <p>The suggested changes seem to be mixing jurisdictional, policy and operational matters and introducing a level of specificity that is not considered appropriate or necessary. Most of the changes sought are a subset of matters that have already been provided for while the submitter has also introduced some new concepts such as a cultural zone and a spatial plan that do not fit within the Proposed Plan framework. There is a 'requirement' to be consistent with iwi management plans, while the submitter is silent on how other planning documents might fit within this framework.</p> <p>The Hearing Panel notes that this activity is already subject to the General Policies 1 to 21 of which Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] are particularly relevant. The Hearing Panel further notes that there will be an opportunity to develop an agreed framework and operational detail for implementing the Plan as part of any Mana Whakahoā Rohe agreement with the submitter.</p> <p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>

Rule 47 – Temporary occupation for community, recreational or sporting events			
22 – Lyndon DeVantier	1034	<p>Amend</p> <p>Submitter opposes Rule 47 of the Plan providing for the temporary occupation for community, recreational or sporting events, up to four days, as a permitted activity.</p>	<p>Decline</p> <p>The Hearing Panel notes that the purpose of Rule 47 is to allow for community (volunteer) recreational or sporting events to occur as much as possible without imposing unnecessary costs and constraints on the event associated with obtaining a resource consent. It potentially applies to such events as national and regional sailing, surf live saving, surfing, triathlons, swimming events and beach carnivals.</p> <p>The Hearing Panel recognises that temporary occupation of parts of the coastal marine area for such events may impact or impinge on other users. As part of the Coastal Plan review, Council compared the proposed rule against equivalent rules elsewhere in the country in terms of duration and area of the temporary occupation and noted that the duration of such events would ranged from three days to unlimited. The Panel notes that the relief sought by</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			the submitter is more restrictive than the norm elsewhere in the country. The Panel recommends no change to the four days.
38 – Nigel Cliffe	1035	Amend Submitter seeks amendment to Rule 47 of the Plan to limit temporary occupation for community, recreational or sporting events to no more than 3 consecutive days over a 5-day period, as a permitted activity.	Decline The Hearing Panel notes that the purpose of Rule 47 is to allow for community (voluntary) recreational or sporting events to occur as much as possible without imposing unnecessary costs and constraints on the event associated with obtaining a resource consent. It potentially applies to such events as national and regional sailing, surf live saving, surfing, triathlons, swimming events and beach carnivals. The Hearing Panel recognises that temporary occupation of parts of the coastal marine area for such events may impact or impinge on other users. As part of the Coastal Plan review, Council compared the proposed rule against equivalent rules elsewhere in the country in terms of duration and area of the temporary occupation and noted that the duration of such events ranged from three days to unlimited. The Panel notes that the relief sought by the submitter is more restrictive than the norm elsewhere in the country. The Panel recommends no change to the four days.
41 – Te Korowai o Ngāruahine Trust	1036	Amend Submitter seeks amendment to Rule 47 of the Plan to require notification to iwi of any community, recreational or sporting events authorised by this rule AND Amend Condition (b) of Rule 47 to read: <i>(b) the activity does not have an adverse effect on the values associated with historic heritage identified in Schedule 5A and B [Historic heritage]; [...]</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter. The Hearing Panel notes that Condition (g) requires that the person undertaking the activity notify the Council at least 5 working days prior to the activity commencing. The Council have agreed to pass the notification information to interested iwi authorities. The Hearing Panel recommends amending the rule to include an additional note under the Activity Description to indicate this for Plan users.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Support	In relation to amending Condition (c) to refer to Schedules 5A and 5B (rather than just Schedule 5). However, in relation to the notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and or Mana Whakahono a Rohe agreements.
	1037	Amend	No relief necessary

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
42 – Ngati Rahiri Hapū		Submitter seeks amendment to Rule 47 of the Plan (if it remains a permitted activity) to include a new or amended condition that no activity can take place within 100m of an historic site unless consultation with iwi has taken place.	The Hearing Panel believes no relief is necessary in that any activity must comply with Condition (b), which relates to the protection of historic heritage (and sites of significance to tangata whenua). Further more Condition (g) includes the requirement for the organisers to notify the Council. This provides the opportunity for Council to check that no scheduled sites of significance are likely to be affected and the appropriateness of a buffer distance. The need or appropriateness of a buffer zone would depend upon the activity and/or the values associated with the particular site.
43 – Royal Forest and Bird Protection Society	1038	Amend Submitter seeks amendment to Rule 47 of the Plan to make temporary occupation for community, recreational or sporting events a controlled activity (rather than a permitted activity).	Decline The Hearing Panel does not recommend granting the relief sought by the submitter. The Hearing Panel notes that the purpose of Rule 47 is to allow for community (voluntary) recreational or sporting events to occur as much as possible without imposing unnecessary costs and constraints on the event associated with obtaining a resource consent. It potentially applies to such events as national and regional sailing, surf live saving, surfing, triathlons, swimming events and beach carnivals and is largely a continuation of an existing rule in the current Plan.
Further submissions – Port Taranaki Ltd (32)		Oppose	
43 – Royal Forest and Bird Protection Society	1039	Amend Submitter seeks amendment to Rule 47 of the Plan to include matters for control to consider effects on indigenous biodiversity, natural character and natural features and landscapes.	Decline The Hearing Panel notes that the purpose of Rule 47 is to allow for as many community (voluntary) recreational or sporting events to occur as possible without imposing unnecessary costs and constraints associated with obtaining a resource consent. Of note the permitted activity rule already includes conditions that address indigenous biodiversity. Council's experience with the current Rule has also been that any adverse effects are less than minor and are temporary and certainly do not impact on natural character, features and landscapes. However, through the notification requirement there is an opportunity for the Council to undertake a preliminary assessment to ensure that this is indeed the case.
43 – Royal Forest and Bird Protection Society	1040	Amend Submitter seeks amendment to the note in Rule 47 of the Plan to refer to Rule 50, which is a discretionary activity classification.	Accept The Hearing Panel recommends granting the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	1041	<p>Amend</p> <p>Submitter seeks amendment to Rule 47 of the Plan to include new or amended standards, terms and conditions to read:</p> <p><i>(a) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant indigenous biodiversity]; <u>and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]</u></i></p> <p><i>(b) the activity does not have an adverse effect on the values associated with <u>cultural and</u> historic heritage identified in Schedule 5 [<u>Cultural and</u> Historic heritage];</i></p> <p><i><u>(ba) the activity does not have adverse effect on Schedules 1 and 2</u></i></p> <p><i><u>(bb) the activity does not adversely affect the suitability of the receiving environment for customary use;</u></i></p> <p><i><u>(bc) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2: [...]</u></i></p>	<p>Accept in part</p> <p>The submitter is seeking amendment to Rule 45 of the Plan to include new and amended standards, terms and conditions. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Grant the relief in kind in relation to Condition (a). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species. Decline the relief sought in relation to Condition (b). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (ba). The Hearing Panel note that the effect of granting this relief would also make this rule redundant as Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape. Decline relief sought in relation to Condition (bb) and (bc) as unnecessary and uncertain for Plan users. The Rule is only providing for the removal and replacement of structures already existing in the coastal marine area. The Hearing Panel notes that impacts on cultural sites of significance are already addressed in Condition (b).

		Retain Rule 48 of the Plan as notified.	Support noted. Rule 48 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
58 – Te Atiawa	1049	Amend	Decline
		Submitter seeks amendment to Rule 48 of the Plan to make the continued occupation of the common marine and coastal area, with an existing lawfully established structure (where the occupation was previously a permitted activity) a restricted discretionary activity (rather than a permitted activity).	<p>The Hearing Panel notes that Rule 48 relates to the continued occupation of existing lawfully established structures where the occupation was a permitted activity at the time of its placement or erection).</p> <p>At the time of the original placement and erection of the structure wider considerations relating to historic heritage and indigenous biodiversity would have been addressed (under alternative rules). The Hearing Panel believes that ongoing occupation of a structure is likely to have less adverse effects subject to it continuing to be used for its originally consented purpose. The Hearing Panel does not believe it practicable, necessary or appropriate to make the continued occupation of existing lawfully established structures in the coastal marine area a restricted discretionary activity for which a resource consent would be required.</p> <p>Of note, as part of this Coastal Plan review, this Council has adopted a precautionary approach whereby, if uncertain that effects can be adequately identified and addressed as a permitted activity or controlled activity, it has determined that the effects will be considered as a fully discretionary activity to ensure issues are comprehensively canvassed.</p> <p>Notwithstanding the above, the Hearing Panel recommend additional standards, terms and conditions to address any adverse environmental effects that may be occurring through the continued occupation of the structure and note that if the new standards, terms and conditions are not met then a consent will be required under Rule 49.</p>
Rule 49 – Continued occupation			
15 – Surfbreak Protection Society	1050	Other	No relief necessary
		Submitter seeks that there be no impacts to surf breaks.	Submitter's comments are noted and have been previously addressed in submission point 448 relating to surfing policies. Policy 19 would be considered as part of any resource consent application under this Rule.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
41 – Te Korowai o Ngāruahine Trust	1051	Amend Submitter seeks amendment to Rule 49 of the Plan to make the continued occupation of the common marine and coastal area, with an existing lawfully established structure (where the occupation was previously a controlled activity) a restricted discretionary activity (rather than a controlled activity).	Decline The Hearing Panel notes that Rule 49 relates to the continued occupation of existing lawfully established structures after the expiry of its consent (and where the occupation was a controlled activity at the time of its placement or erection). At the time of the original placement and erection of the structure wider considerations relating to historic heritage and indigenous biodiversity would have been addressed (under alternative rules). The Hearing Panel believes that ongoing occupation of a structure is likely to have less adverse effects subject to it continuing to be used for its originally consented purpose. The Hearing Panel does not believe it necessary to include additional conditions. Of note, as part of this Coastal Plan review, the Council has adopted a precautionary approach whereby, if uncertain that effects can be adequately identified and addressed as a permitted activity or controlled activity, it has determined that the effects will be considered as a fully discretionary activity to ensure issues are comprehensively canvassed.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
43 – Royal Forest and Bird Protection Society	1052	Amend Submitter seeks amendment to Rule 49 of the Plan by: <ul style="list-style-type: none"> removing Outstanding Value, Estuaries Unmodified, and Estuaries Modified coastal management areas from the rule and to make the continued occupation of an existing lawfully established structure in such areas (where the occupation was previously a controlled activity) a restricted discretionary activity (rather than a controlled activity) including matters for control to consider effects on indigenous biodiversity, natural character and natural features and landscapes and other matters to consider the effects of noise, light and location. 	Accept in part The Hearing Panel does not recommend granting the relief sought by the submitter. In relation to removing Outstanding Value, Estuaries Unmodified, and Estuaries Modified coastal management areas from the rule and to making the continued occupation of an existing lawfully established structure in such areas a restricted discretionary activity is not considered appropriate or necessary and would result in the imposition of unnecessary consenting costs for structures already present in these areas and which are considered to be having less than minor adverse effects (noting that issues with placement have already been separately addressed in another rule). The Hearing Panel notes that Rule 49 relates to the continued occupation of existing lawfully established structures after the expiry of its consent (and where the occupation was a controlled activity at the time of its placement or erection). At the time of the original placement and erection of the structure wider considerations relating to indigenous biodiversity and natural character would have been addressed (under alternative rules). The Hearing Panel

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			believes that ongoing occupation of a structure is likely to have less adverse effects subject to it continuing to be used for its originally consented purpose. Notwithstanding the above, the Hearing Panel recommends that the matters of control be amended to include natural character, features and landscape values and effects on indigenous biodiversity. This Council has adopted a precautionary approach whereby, if uncertain that effects can be adequately identified and addressed as a permitted activity or controlled activity, it has determined that the effects will be considered as a fully discretionary activity to ensure issues are comprehensively canvassed.

	1058	Amend	Decline

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust		<p>Submitter seeks amendment to the Control/notification column for Rule 49 of the Plan to read:</p> <p><i>Control is reserved over:</i></p> <p>[...]</p> <p>(d) effects on water quality <u>and mauri values</u>;</p> <p>(e) effects on ecological values;</p> <p>(f) effects on historic, cultural and amenity values;</p> <p>(g) effects on surf breaks;</p> <p>(h) effects of occupation on public access;</p> <p>(i) effects on navigation;</p> <p>(j) effects of noise and light;</p> <p><u>(k) effects on Cultural Zone (referred to in Spatial Plan);</u></p> <p><u>(l) monitoring (including tangata whenua indicators referred to in the tangata whenua monitoring plan) and information requirements;</u></p> <p>(m) duration of consent; and</p> <p>(n) review of consent conditions.</p> <p>Resource consent applications under this Rule will not be publicly notified but may be limited notified <u>be notified to tangata whenua</u>.</p>	<p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>The suggested changes seem to be mixing jurisdictional, policy and operational matters and introducing a level of specificity that is not considered appropriate or necessary. Most of the changes sought are a subset of matters that have already been provided for while the submitter has also introduced some new concepts such as a cultural zone and a spatial plan that do not fit within the Proposed Plan framework. There is a 'requirement' to be consistent with iwi management plans, while the submitter is silent on how other planning documents might fit within this framework.</p> <p>The Hearing Panel notes that this activity is already subject to the General Policies 1 to 21 of which Policies 15 [Historic heritage] and 16 [Relationship of tangata whenua] are particularly relevant. The Panel further notes that there will be an opportunity to develop an agreed framework and operational detail for implementing the Plan as part of any Mana Whakahoā Rohe agreement with the submitter.</p> <p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Panel recommends amending the heading throughout the rules section to refer only to "<i>matters of control/discretion</i>" and deleting any references to consenting notification requirements in the rules (noting relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>

Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to “<i>matters of control/discretion</i>” and deleting any references to consenting notification requirements in the rules (noting relevant notification requirements are set out in sections 95A to 95G of the RMA).</p> <p>The Hearing Panel further notes that, in addition to the requirements of the RMA, notification to iwi can also be addressed through Mana Whakahono a Rohe agreements without the need to be included in the Plan rules.</p>
NEW Rule 50A – Coastal occupation			
43 – Royal Forest and Bird Protection Society	1065	Amend Submitter seeks amendment to the Plan to make the continued occupation of an existing lawfully established structure in Outstanding Value, Estuaries Unmodified, and Estuaries Modified coastal management areas (where the occupation was previously a Permitted or controlled activity).	Decline Refer to submission points 1045 and 1052.
Rule 51 – Clearance of outfalls, culverts and intake structures			
21 – Climate Justice Taranaki	1066	Amend Submitter seeks amendment to Rule 51 [Clearance of outfalls, culverts and intake structures and any associated activities] of the Plan to make the activity Discretionary (rather than Permitted) in coastal management areas: Outstanding value and Estuaries Unmodified – especially the discharge of contaminants.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that the activity is to allow minor disturbances of the foreshore and seabed for the purpose of removing accumulated sediment that is adversely affecting the use and performance of a culvert, outfall or intake structure. Anticipated effects should be less than minor, subject to compliance with the standards, terms and conditions. Of note, Rule 51 relates only to maintenance activities (and incidental discharges) associated with existing structures rather than the discharge itself. Given that the placement of these structures are already authorised in Outstanding value and Estuaries Unmodified coastal management areas,

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			requiring a resource consent for ongoing maintenance works is not considered appropriate or necessary.
40 – Te Rūnanga o Ngāti Mutunga	1067	Amend Submitter seeks amendment to Rule 51 of the Plan to include two additional conditions: <i>(f) the activity does not have an adverse effect on the values associated with historic heritage identified in Schedule 5 (Historic Heritage)</i> <i>(g) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A.</i>	Accept The Hearing Panel notes that Rule 51 relates to allowing minor disturbances of the foreshore and seabed for the purpose of removing accumulated sediment that is adversely affecting the use and performance of a culvert, outfall or intake structure. At the time of the original placement and erection of the structure wider considerations relating to historic heritage and indigenous biodiversity would have been addressed (under alternative rules). However, to ensure a precautionary approach, the Hearing Panel recommends the inclusion of additional standards terms and conditions to ensure no adverse effects to significant indigenous biodiversity, including taonga species and historic heritage identified in Schedules 5A and B. These are reflected in new standards terms and conditions (aa), (ab) and (ac).
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
40 – Te Rūnanga o Ngāti Mutunga	1068	Amend Submitter opposes permitting the clearance of outfalls, culverts and intake structures in the coastal marine area and seek amendment to Rule 51 of the Plan to make such activities be a discretionary activity.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that the activity is to allow minor disturbances of the foreshore and seabed for the purpose of removing accumulated sediment that is adversely affecting the use and performance of a culvert, outfall or intake structure. Anticipated effects should be less than minor, subject to compliance with the standards, terms and conditions. Of note Rule 51 relates only to maintenance activities (and incidental discharges) associated with existing structures rather than the discharge itself. Requiring a resource consent for ongoing maintenance works is not considered appropriate or necessary.
43 – Royal Forest and Bird Protection Society	1069	Amend Submitter seeks amendment to Rule 51 of the Plan to clarify that the rule provides for clearance of lawfully established structures only and add further conditions and limits to specify: <ul style="list-style-type: none"> the amount of disturbance or deposition of material 	Accept in part The Hearing Panel recommends amending the Activity Description of Rule 51 to refer to lawfully established structures. In relation to the other matters raised by the submitter, the Hearing Panel does not recommend granting the reliefs sought. Of note, the Rule is based on an equivalent rule in the current Plan for which there have been no issues

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> a limit or guidance on "<i>minimum necessary</i>" to ensure removal of material does not result in adverse effects whether mitigation may be appropriate in outstanding or significant locations and require consent the type of material which can be deposited adverse effects of depositing the material inappropriately. 	<p>with its implementation and application to date. Specific comments are as follows:</p> <ul style="list-style-type: none"> The amount of disturbance or deposition of material will depend upon the structure but given there can be significant costs associated with doing this maintenance works there is an incentive for the person not to do more than they need to do to protect the use and performance of their culvert, outfall or intake structure. As per above, the minimum amount of material that can be removed will depend upon the structure but given there can be significant costs associated with doing this maintenance works, again, there is an incentive for the person not to do more than they need to do to protect the use and performance of their culvert, outfall or intake structure. As per the reading of the condition, any material placed on the foreshore or seabed will consist of the same material as the receiving environment, e.g. shingle or rocks on rocky shores, sand on sandy beaches or sea floors. Subject to the standards, terms and conditions, the Hearing Panel believes adverse environments will be appropriately managed. However, in response to concerns raised by the submitter, the Hearing Panel recommends the inclusion of two new standards, terms and conditions addressing adverse effects on indigenous biodiversity and historic heritage.
47 – Fonterra	1070	<p>Amend</p> <p>Submitter seeks amendment to Condition (e) of Rule 51 of the Plan to read: <i>(e) activity does not restrict public access for more than <u>seven days 24 hours</u>.</i></p>	<p>Accept in part</p> <p>Submitter notes that clearance activities on larger structures may take longer than one day due to weather events and notes that these structures are located in areas where there is generally low levels of demand for access.</p> <p>The Hearing Panel agrees in part but consider a restriction on public access up to 7 days to be excessive for a permitted activity. Instead, the Hearing Panel recommends that public access restrictions be limited to 72 hours.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
57 – Heritage New Zealand	1071	Amend Submitter seeks amendment to Rule 51 of the Plan to include an additional condition: <i>(f) disturbance does not occur within a site included in Schedule 5 [Historic Heritage].</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter with the inclusion of new standard, term and condition (ac).
58 – Te Atiawa	1072	Amend Submitter seeks amendment to Rule 51 of the Plan to include two additional conditions to read: <i>(f) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant indigenous biodiversity], and;</i> <i>(g) the activity does not have an adverse effect on the values associated with sites of significance to Māori identified in Schedule 5A and 5B.</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter.

59 – KiwiRail	1073	Support Retain Rule 51 of the Plan as notified.	Accept Support noted. Rule 51 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.
Further submissions – Port Taranaki Ltd (32)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	1074	Amend Submitter seeks amendment to Rule 51 of the Plan to include new standards, terms and conditions to read: [...] <i>(f) the discharge does not have an adverse effect on the values associated with cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage];</i> <i>(g) the discharge does not have adverse effect on Schedules 1 and 2;</i> <i>(h) the discharge does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</i>	Accept in part The submitter is seeking amendment to Rule 51 of the Plan to include new and amended standards, terms and conditions that primarily address cultural and historic heritage and indigenous biodiversity considerations. The Hearing Panel notes that a number of submitters have raised similar considerations. The Panel recommends that in a manner that is consistent to that adopted in conditions adopted in other rules that three new conditions be added to the rule that reads as follows: [...]

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p><u>(i) the discharge does not adversely affect the suitability of the receiving environment for customary use;</u></p> <p><u>(j) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type, or any sensitive marine benthic habitat including those identified in Schedule 4 [Significant indigenous biodiversity] or any reef system; and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat].</u></p>	<p><u>(aa) disturbance does not have an adverse effect on significant indigenous biodiversity, including those identified in Schedule 4 [Significant indigenous biodiversity];</u></p> <p><u>(ab) the activity does not have a significant effect on the values associated with taonga species identified in Schedule 4C [Taonga species];</u></p> <p><u>(ac) disturbance does not have an adverse effect on the values associated with historic heritage identified in Schedule 5A and B [Historic heritage];</u></p>
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
Rule 52 – Collection of benthic grab samples			
6 – Trans-Tasman Resources Ltd	1075	<p>Support</p> <p>Retain Rule 52 of the Plan as this rule appropriately enables monitoring of effects on benthic communities by providing for the removal of benthic material as a permitted activity where it is for scientific or monitoring purposes and where it meets the terms set out in the rule.</p>	<p>Accept</p> <p>Support noted. Rule 52 is retained subject to amendments to offer relief to other submitters' concerns where appropriate.</p> <p>The Hearing Panel further note that in relation to other requests from the submitter (and others) additional rules have been incorporated into the Plan to address other disturbance activities for scientific sampling and monitoring purposes generally (Rules 52, 52A and 52B).</p>
Further submissions – Port Taranaki Ltd (32)		Support	
Further submissions – Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
6 – Trans-Tasman Resources Ltd	1076	<p>Amend</p> <p>Submitter seeks consequential changes to Condition (g) of Rule 52 of the Plan that gives effect to previous reliefs sought. Consequential amendments read as follows:</p> <p><u>(g) sampling does not have an adverse effect on any threatened or at risk, or regionally distinctive (declining) species, or any rare and uncommon ecosystem type, or any sensitive marine benthic habitat including those identified in Schedule 4 [Significant indigenous biodiversity] or any reef system; [...]</u></p>	<p>Decline</p> <p>The Hearing Panel does not recommend granting this relief as deleting reference to regionally distinctive species would be inconsistent with Bio Policy 4 of the <i>Regional Policy Statement</i>, which refers to, amongst other things, the presence of regionally distinctive species as a criteria for identifying significant indigenous biodiversity values in Taranaki. The category also contributes to giving effect to Policy 11(a)(iv) of the <i>New Zealand Coastal Policy Statement</i>. It is the Hearing Panel's view that Plan provisions should recognise the local context and provide for the protection of indigenous species that are locally significant to the Taranaki region, irrespective of their national threat status.</p>
Further submissions – Department of Conservation (29)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			The Hearing Panel also recommends declining the relief sought in relation to deleting reference to sensitive benthic habitats. Sensitive benthic habitats refer to marine habitats identified in the report https://www.trc.govt.nz/assets/Documents/Plans-policies/CoastalPlanReview/SensitiveHabitats.PDF that have low tolerance to habitat damage and for which the time for the habitat to recover from any damage would be significant. Given the sensitivity and vulnerability of such marine habitats, the Hearing Panel considers it appropriate that they be recognised and provided for in Rule 52.
41 – Te Korowai o Ngāruahine Trust	1077	Amend Submitter seeks amendment to Rule 52 of the Plan to require notification to iwi of any benthic grab sampling authorised by this rule.	Accept The Hearing Panel notes that, under Condition (h), the Council requires to be informed of the activity at least five working days prior to the activity commencing and have agreed to pass this information to iwi authorities. The Hearing Panel recommends including an additional note under the Activity Description in response to the submitters request to read as follows: <i><u>Note (2): Iwi authorities that have requested to be informed of this activity will be advised by the Council.</u></i>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
43 – Royal Forest and Bird Protection Society	1078	Support Retain Rule 52 of the Plan as notified.	Accept Support noted. Rule 52 is retained subject to minor amendments as requested by other submitters that do not change the policy intent.
58 – Te Atiawa	1079	Amend Submitter seeks amendment to Rule 52 of the Plan so that Iwi are notified.	Accept In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. However, in relation to permitted activity notifications, the Council requires notification under standard, term and condition (h) at least five working day before the activity is due to commence, and has agreed to forward this notification to iwi authorities that have requested to be kept informed. The Hearing Panel recommends including Note (2) in response to the submitters request to read:

Rule 54 – Burial of dead animals			
29 – Department of Conservation	1086	<p>Amend</p> <p>Submitter seeks amendment to Rule 54(e) of the Plan to read:</p> <p>(e) <u>except for seals</u>, where a marine mammal is buried, the relevant iwi authority is notified prior to the burial taking place [...]</p>	<p>Accept</p> <p>The submitter notes that most of the marine mammals that the Department of Conservation bury are dead seals and that the frequency of dead seal burials means that it is likely to be impracticable to consult with iwi on every occasion. The submitter further notes that the Taranaki Iwi deed of settlement already adequately covers the requirement for the Department to cooperate with and advise iwi of any marine mammal strandings and burials.</p> <p>The Hearing Panel recommends granting the relief sought by the submitter.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	1087	Amend Submitter seeks amendment to Rule 54(b) of the Plan to read: <i>(b) the activity does not occur at any site identified in Schedule 56B [Sites of significance to Māori] [...]</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
58 – Te Atiawa	1088	Support in Part Submitter seeks amendment to Rule 54(b) of the Plan to read: <i>(b) the activity does not occur at any site identified in Schedule 56B [Sites of significance to Māori] [...]</i>	Accept The Hearing Panel recommends granting the relief sought by the submitter.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	
60 – Te Kaahui o Rauru	1089	Amend Submitter seeks amendment to Rule 54 of the Plan to require active involvement of tangata whenua (not just notification) when it comes to the burial of dead animals on the beach, particularly the burial of marine mammals.	Decline In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or any Mana Whakahono a Rohe agreements. In addition, the Hearing Panel notes that the activity of burying marine mammals in the coastal marine area is undertaken by the Department of Conservation and notes that involvement with local iwi and hapu is often provided for through the Department of Conservation engagement processes. The Hearing Panel notes that Council routinely works with the Department of Conservation in such matters. Treaty of Waitangi deeds of settlement adequately covers Departmental requirements to cooperate with and advise iwi of any marine mammal strandings and burials.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	1090	<p>Amend</p> <p>Submitter seeks amendment to Rule 54 of the Plan to include new and amended standards, terms and conditions to read:</p> <p><i>(a) the activity does not have an adverse effect on the values associated with <u>cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage];</u></i></p> <p><i><u>(aa) the activity does not have adverse effect on Schedules 1 and 2;</u></i></p> <p><i><u>(ab) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</u></i></p> <p><i><u>(b) the activity does not occur at any site identified in 6B [Sites of significance to Māori and associated values] except with express permission of the relevant iwi authority;</u></i></p> <p><i>(c) activity complies with the general standards in Section 8.6;</i></p> <p><i>(d) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type, or any sensitive marine benthic habitat including those identified in Schedule 4 [Significant indigenous biodiversity] or any reef system <u>and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]; [...]</u></i></p>	<p>Accept in part</p> <p>The submitter is seeking amendment to Rule 54 of the Plan to include new and amended standards, terms and conditions. Specific comments on the new and amended proposed conditions are as follows:</p> <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (a). The Hearing Panel refers the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (aa) and (ab). Hearing Panel note that the effect of granting this relief would also make this rule redundant as Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape and it requires no adverse effects (even those less than minor or transitory). Decline relief sought in relation to deleting Condition (b) as express permission from the appropriate iwi authority should the burial of dead animals be required in their sites of significance is considered appropriate. Grant the relief in kind in relation to Condition (b). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species.

The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 58 – Introduction of exotic plants			
29 – Department of Conservation	1103	Support	Accept
		Retain Rule 58 of the Plan as notified.	Support noted. Rule 58 is retained as notified.
43 – Royal Forest and Bird Protection Society	1104	Support	Accept
		Retain Rule 58 of the Plan as notified.	Support noted. Rule 58 is retained as notified.
58 – Te Atiawa	1105	Other	No relief necessary
		Seek discussion with the Taranaki Regional Council with respect to the purpose of allowing the introduction of exotic plants into the coastal marine area.	Comments noted. The Hearing Panel note that the Rule framework recognises that the introduction of exotic plants into the coastal marine area would not generally be acceptable. Hence, the activity can only be authorised through the consenting process as a discretionary activity or a non-complying activity (depending upon the coastal marine area where the activity is proposed to occur).

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
Rule 59 – Introduction of exotic plants			
29 – Department of Conservation	1107	Support	Accept
		Retain Rule 59 of the Plan as notified.	Rule 59 retained as notified.
40 – Te Rūnanga o Ngāti Mutunga	1108	Support	Accept
		Retain Rule 59 of the Plan as notified.	Rule 59 retained as notified.
43 – Royal Forest and Bird Protection Society	1109	Amend	No relief necessary
		Submitter seek amendment to Rule 59 to give effect to the <i>New Zealand Coastal Policy Statement</i> .	The submitter notes that the introduction of exotic plants is not consistent with protection or enhancement of natural character. In particular they are concerned about adverse effects on significant biodiversity values. The Hearing Panel does not believe that relief is required. The Panel agrees with the submitter that the introduction of exotic plants in the coastal marine area is likely to degrade natural character. This has been recognised in the Plan whereby Rule 59 makes this activity a non-complying activity for which a resource consent would be required. The Panel notes that non-complying activity represents a very high level of regulatory protection whereby a resource consent cannot be granted unless the effects of the activity are minor and the activity is not contrary to the objectives and policies of the Plan.
58 – Te Atiawa	1110	Support	Accept
		Submitter supports Rule 59 of the Plan as notified.	Support noted. Rule 59 retained as notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response

Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>
Rule 60 – Other disturbance, damage, destruction, removal or deposition			
26 – Transpower NZ Ltd	1112	<p>Amend</p> <p>Submitter supports Rule 60 of the Plan but seeks amendment to Rule to delete reference to National Environmental Standards for Electricity Transmission Activities:</p>	<p>Accept</p> <p>The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		[...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).	
40 – Te Rūnanga o Ngāti Mutunga	1113	Amend Submitter seeks amendment to Rule 60 of the Plan to make disturbance, damage, destruction, removal or deposition of the foreshore and seabed a non-complying activity in Estuaries Modified, Open Coast and Port coastal management areas (i.e. all coastal management areas).	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that discretionary activity classifications provides a high level of regulatory protection and Hearing Panel do not consider it appropriate to preclude this activity across coastal management areas already modified by coastal activities without determining the scale and possible effects as would be determined on a case-by-case basis through the consenting process.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Further submissions – Climate Justice Taranaki Inc (21)		Support	
43 – Royal Forest and Bird Protection Society	1114	Amend Submitter seeks amendment to Rule 60 of the Plan to give effect to the <i>New Zealand Coastal Policy Statement</i> .	No relief necessary The Hearing Panel recommends declining the relief sought by the submitter. The submitter suggests that these activities can have significant adverse effects on indigenous biodiversity and natural character not identified in the Plan. The submitter seeks amendments to Plan policies to give effect to the <i>New Zealand Coastal Policy Statement</i> and believes amendments are necessary to provide for this activity as a discretionary activity. The Hearing Panel notes that the submitters concerns regarding indigenous biodiversity and natural character are provided for within the Plan in Policy 9 [Natural character and natural features and landscapes] and Policy 14 [Indigenous biodiversity] and that Rule 60 must give effect to the relevant policies including all of the General Policies as indicated in the Policy reference column. It is Hearing Panel's view that the requirements of the <i>New Zealand Coastal Policy Statement</i> have been fulfilled through the Proposed Plan and suggested amendments to the Proposed Plan (addressed elsewhere in this report).
47 – Fonterra	1115	Support Retain Rule 60 of the Plan as notified.	Accept Support noted. Rule 60 retained as notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Support	
58 – Te Atiawa	1116	Amend	Decline
		Submitter seeks amendment to Rule 60 of the Plan to change the activity classification to non-complying (currently discretionary activity) for the Estuaries Modified and the Open Coast coastal management areas.	The Hearing Panel recommends declining the relief requested by the submitter. The Hearing Panel does not consider it appropriate to further restrict this activity in the Estuaries Modified and the Open Coast coastal management areas. As a discretionary activity a resource consent is required and, through the consenting process, any application for disturbance activities on the foreshore or seabed can be fully considered.
Further submissions – Trans-Tasman Resources Ltd (6), Department of Conservation (29)		Oppose

			changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to " <i>matters of control/discretion</i> " and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
Rules 60 and 61 - Other disturbance, damage, destruction, removal, or deposition that is not provided for in Rules 51 to 59			
6 – Trans-Tasman Resources Ltd	1118	Support Retain Rules 60 and 61 providing for other disturbance activities as Discretionary or non-complying in more sensitive areas and suggests this is appropriate and consistent with the way in which the other rules have approached similar catch all provisions (Rules 13, 14, 33, 34, 42, and 43).	Accept Support noted. Rules 60 and 61 are retained with minor amendment to Rule 61 to remove the reference to the <i>Resource Management (National Environmental Standards for Electricity Transmission Activity Regulations 2009 (Appendix 6))</i> .
Further submissions – Port Taranaki Ltd (32)		Support	
21 – Climate Justice Taranaki	1119	Amend Submitter notes concerns that Rules 60 and 61 are silent on seabed mining and seeks that the Plan be amended to make seabed mining a prohibited activity.	Decline The Hearing Panel notes that non-complying activity is already a very high level of regulatory protection whereby a resource consent cannot be granted unless the effects of the activity are minor and the activity is not contrary to the objectives and policies of the Plan. Of note the policies themselves are very prescriptive and that it is necessary to give effect to all policies recognised in the policy reference column, namely General Policies 1 – 21 and Activity-based Policies 39, 40, 41, 42 and 44. The Hearing Panel does not believe it is appropriate to preclude any consideration of an activity being considered without first determining the possible effects.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Rule 61 - Other disturbance, damage, destruction, removal, or deposition that is not provided for in Rules 51 to 59 (Outstanding Value, Estuaries Unmodified)			
26 – Transpower NZ Ltd	1120	Amend	Accept
		Submitter supports Rule 61 but seeks amendment to Rule to delete reference to National Environmental Standards for Electricity Transmission Activities: <i>[...] or the Resource Management (National Environmental Standards for Electricity Transmission Activities Regulations 2009 (Appendix 6)).</i>	The reference to the <i>National Environmental Standards for Electricity Transmission</i> is redundant and does not add further value to the Plan. The Hearing Panel recommends granting the relief sought by the submitter.
58 – Te Atiawa	1121	Support	Accept
		Retain Rule 61 as notified.	Support noted. Rule 61 is retained with minor amendment to remove the reference to the <i>Resource Management (National Environmental Standards for Electricity Transmission Activity Regulations 2009 (Appendix 6))</i> .
61 – Te Rūnanga o Ngāti Ruanui Trust	1122	Amend	Decline
		Submitter seeks amendment to Rule 61 of the Plan to include standards, terms and conditions to read: <i>(a) the activity does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</i> <i>(b) the activity complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</i> <i>(c) the activity is consistent with iwi management plan.</i> AND Include the following notification note: <i>Resource consent applications under this Rule will be notified to tangata whenua.</i>	The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities. The Hearing Panel recommends declining the relief sought noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies. The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 39, 40, 41, 42 and 44 being given effect to. In particular, Policy 16 [Relationship with tangata whenua] will provide protections for areas of concern identified by the submitter.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and or Mana Whakahono a Rohe agreements. In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Hearing Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
NEW Rule 61A – Other disturbance, damage, destruction, removal or deposition associated with the National Grid			
26 – Transpower NZ Ltd	1123	<p>Amend</p> <p>Submitter seeks amendment to the Plan to include a new rule that provides for Regionally Important Infrastructure (or specific to the National Grid) and reads as follows:</p> <p><u>Rule 61A - Discretionary Activity</u></p> <p><u>Coastal management areas: Outstanding Value; Estuaries Unmodified</u></p> <p><u>Other disturbance, damage, destruction, removal or deposition associated with Regionally Significant Infrastructure (or the National Grid) and any associated works:</u></p> <p><u>(a) removal of sand, shell, shingle or other natural material; or</u></p> <p><u>(b) deposition of material in, on or under the foreshore or seabed that does not come within or comply with Rules 51 to 59, or any other Rule in this Plan including the deemed rules in the Resource Management (Marine Pollution) Regulations 1998 (Appendix 5).</u></p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter.</p> <p>The Hearing Panel does not believe it necessary to have a new 'catch-all' rule for disturbance activities on the seafloor and seabed (not otherwise provided for in Rules 51 to 59) addressing regionally important infrastructure in Outstanding Value and Estuaries Unmodified coastal management areas.</p> <p>The Hearing Panel notes that applications for a resource consent for Regionally Important Infrastructure may still be considered under Rule 61 as a non-complying activity. While the Panel recognises that non-complying activities represent a very high level of regulatory protection, this level of protection is considered appropriate due to the exceptional/significant values in these areas. The Panel notes that a resource consent can still be granted where the effects of the activity are less than minor and the activity is not contrary to the objectives and policies of the Plan.</p>

Rule 62 - Reclamation or drainage for erosion and flood control within areas of outstanding coastal value and unmodified estuaries			
29 – Department of Conservation	1124	<p>Support</p> <p>Retain Rule 62 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted. Rule 62 is retained as notified.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
61 – Te Rūnanga o Ngāti Ruanui Trust	1125	<p>Amend</p> <p>Submitter seeks amendment to Rule 62 of the Plan to include standards, terms and conditions to read:</p> <p><u>(a) the activity does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></p> <p><u>(b) the activity complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></p> <p><u>(c) the activity is consistent with iwi management plan.</u></p> <p>AND</p> <p>Include the following notification note:</p> <p><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></p>	<p>Decline</p> <p>The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary and non-complying activities.</p> <p>The Hearing Panel recommends declining the relief sought noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies as detailed in the Policy reference column. In this instance, this includes all the General Policies 1 to 21 as well as Activity-based Policies 22, 39, 40, 41, 42, 44, 45, 46, 49.</p> <p>The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process by giving effect to the above policies.</p> <p>In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and/or Mana Whakahono a Rohe agreements.</p> <p>In relation to notification requirements, the submitter (and others) has highlighted an issue with the notification requirements stated in the Plan which in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Panel recommends amending the heading throughout the rules section to refer only to "matters of control/discretion" and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).</p>
Rule 63 – Other reclamation or drainage that is not provided for in Rule 62 (Estuaries Modified, Open Coast, Port)			
29 – Department of Conservation	1126	<p>Support</p> <p>Retain Rule 63 of the Plan as notified.</p>	<p>Accept</p> <p>Support noted</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Support	
40 – Te Rūnanga o Ngāti Mutunga	1127	Amend Submitter seeks amendment to Rule 63 of the Plan to include 2 additional conditions: <u>(a) the activity does not have an adverse effect on the values associated with historic heritage identified in Schedule 5 (Historic Heritage)</u> <u>(b) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A.</u>	Decline The Hearing Panel recommends declining the relief requested by the submitter as rules with a discretionary activity classification do not include standards, terms or conditions as they are determined on a case-by-case basis through the consenting process. The Panel notes that the activity will be required to give effect to the relevant policies, namely General Policies 1 to 21 and Activity-based Policies 45 and 46. The submitter's concerns regarding historic heritage and biodiversity will be explicitly considered and addressed when giving effect to Policy 14 [indigenous biodiversity] and Policy 15 [historic heritage].
41 – Te Korowai o Ngāruahine Trust	1128	Amend Submitter seeks amendment to Rule 63 of the Plan to acknowledge the role that kaitiaki play in wanting to protect areas of ecological value and biodiversity and sites of significance.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel does not consider the rules to be an appropriate place to discuss the role of kaitiaki in wanting to protect areas of ecological value, biodiversity and sites of significance. Such matters have been addressed elsewhere in the Plan. The Hearing Panel note that the rules are subject to the provisions within the policies and as such kaitiaki is already provided for within Policy 16 [Relationship of tangata whenua]. Thus, kaitiaki will have to be considered through this Rule irrespective of whether it is explicitly mentioned or not and can be done so through iwi involvement in consents.
41 – Te Korowai o Ngāruahine Trust	1129	Amend Submitter seeks amendment to Rule 63 of the Plan to include conditions to ensure that the activities do not have any adverse effects on species and ecosystems and do not impact on the values of the sites listed in Schedules 5A and B.	Decline It is not standard planning practice for discretionary and non-complying activities to contain standards, terms or conditions. These considerations are addressed through the consenting process on a case-by-case basis by giving effect to the relevant policies (1 to 21 and 47). The Hearing Panel notes that Policy 14 [Indigenous biodiversity] provides protections for regionally important species and ecosystems and Policy 15 [Historic heritage] provides protections for the values of sites listed in Schedules 5A and 5B. The Hearing Panel recommends declining the requested relief as it is an operational level of detail that is not required within the rules section of the Plan.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
58 – Te Atiawa	1130	<p>Amend</p> <p>Submitter seeks amendment to Rule 63 of the Plan to include the following conditions:</p> <p><i><u>(a) activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant indigenous biodiversity], and;</u></i></p> <p><i><u>(b) the activity does not have an adverse effect on the values associated with sites of significance to Māori identified in Schedule 5A and 5B.</u></i></p>	<p>Decline</p> <p>The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to Discretionary Activities.</p> <p>The Hearing Panel recommends declining the relief noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Conditions relating to a non-complying activity are developed on a case-by-case basis through the consenting process having regard to the relevant Plan policies.</p> <p>The Hearing Panel notes that all matters identified by the submitter would be considered through the consenting process with Policies 1 to 21, 22, 39, 40, 41, 42, 44, 45, 46 and 49 being given effect to.</p> <p>In relation to notification requirements proposed by the submitter, the Hearing Panel notes that the Plan is not intended to provide the operational detail for implementing every aspect of the Plan. Such detail is more appropriately included in the Council's standard operating procedures and or Mana Whakahono a Rohe agreements.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	1131	<p>Amend</p> <p>Submitter seeks amendment to Rule 63 of the Plan to include standards, terms and conditions to read:</p> <p><i><u>(a) the activity does not adversely affect the matters/values identified for protection by mana whenua in the cultural impact assessment;</u></i></p> <p><i><u>(b) the activity complies with tangata whenua indicators referred to in the tangata whenua monitoring plan</u></i></p> <p><i><u>(c) the activity is consistent with iwi management plan.</u></i></p> <p>AND</p> <p>Include the following notification note:</p> <p><i><u>Resource consent applications under this Rule will be notified to tangata whenua.</u></i></p>	<p>Decline</p> <p>The submitter has sought the inclusion of standards, terms and conditions for rules in the Plan relating to discretionary activities.</p> <p>The Hearing Panel recommends declining the relief noting that it is not standard planning practice for discretionary activity or non-complying activity rules to include standards, terms and conditions. Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			in turn raises issues with notification requirements in the RMA being regularly changed. The Hearing Panel notes that, over time the notification requirements identified in the Plan may become misleading and outdated following changes to RMA. Consequently, the Panel recommends amending the heading throughout the rules section to refer only to “matters of control/discretion” and deleting any references to consenting notification requirements in the rules (noting that the relevant notification requirements are set out in sections 95A to 95G of the RMA).
Rule 64 – Other reclamation or drainage that is not provided for in Rule 62 (Outstanding Value, Estuaries Unmodified)			
29 – Department of Conservation	1132	Support	Accept
		Retain Rule 64 of the Plan as notified.	Support noted.
40 – Te Rūnanga o Ngāti Mutunga	1133	Support	Accept
		Retain Rule 64 of the Plan as notified.	Support noted.
43 – Royal Forest and Bird Protection Society	1134	Support	Accept
		Retain Rule 64 of the Plan as notified.	Support noted.
58 – Te Atiawa	1135	Support	Accept
		Retain Rule 64 of the Plan as notified.	Support noted.
Rule 65 – Taking or use of water, heat or energy			
6 – Trans-Tasman Resources Ltd	1136	Support	Accept
		Retain Rule 65 as this rule appropriately provides for the taking and use of coastal water as a permitted activity where the taking and use would not affect significant sites, species, or ecosystems.	Support noted. Rule 65 is retained subject to amendments made to offer relief to other submitters' concerns where appropriate.
Further submissions – Port Taranaki Ltd (32)		Support	At the hearing, the submitter presented further on Rule 65 standard, term and condition (ca). The submitter considers that there is no quantity or rate of water take that would result in a significant adverse environmental effect and consider that the condition should be removed. The Hearing Panel agrees in part that it is difficult to envisage a quantity or rate of take from coastal waters likely to have adverse environmental effects. However, the Panel considers that, as part of a precautionary approach, and in response to other submitter
Further submissions– Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			requests, the condition should be retained in the unlikely event or scenario that wider environmental impacts do occur through the taking of coastal water.
33 - New Zealand Defence Force	1137	Amend Submitter seeks amendment to Rule 65 of the Plan to determine a limit on quantity and/or rate of water take, or otherwise amend to ensure consistency with Policy 47.	Accept The Hearing Panel is not aware of any water allocation limit that is likely to result in sea level dropping or prevent the availability of coastal water for other uses and values. Notwithstanding that, as part of a precautionary approach, the Hearing Panel recommends granting the relief sought by amending Rule 65 to include a new condition that is consistent with Policy 47 of the Plan to read as follows: <u>(ca) the taking or use of water is not at a quantity or rate that would cause significant adverse environmental effects.</u>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
40 – Te Rūnanga o Ngāti Mutunga	1138	Amend Submitter seeks amendment to Rule 65 of the Plan to exclude coastal management area Outstanding Value from the rule.	Decline The Hearing Panel recommends declining the relief sought by the submitter. Hearing Panel is not aware of any water allocation limit that is likely to result in sea level dropping, prevent the availability of coastal water for other uses and values, and or have noticeable effects on natural character, features and landscapes.
40 – Te Rūnanga o Ngāti Mutunga	1139	Amend Submitter seeks amendment to Rule 65 by including a new standard, term and condition (and impose a limit) on the quantity of water that can be taken and to read as follows: <u>(c) taking or use of water is not at a quantity or rate that would cause adverse environmental effects.</u>	Accept in part The Hearing Panel is not aware of any water allocation limit that is likely to result in sea level dropping or prevent the availability of coastal water for other uses and values. Notwithstanding that, as part of a precautionary approach, the Panel recommends granting the relief sought noting that the new Condition (ca) is consistent with Policy 47 of the Plan.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
60 – Te Kaahui o Rauru	1144	Amend Submitter seeks amendment to Rule 65 of the Plan to notify Te Kaahui o Rauru of this kind of activity, especially in regards to the scale and timing of the activity.	Decline Unlike other permitted activity rules, the standards, terms and conditions do not require that the person undertaking the activity notify the Council of the activity, which, in some instances, the Council has agreed to pass on the notification details to iwi authorities. This is because the activity is considered to result in less than minor effects (if any). The Hearing Panel note that if the activity cannot comply with the standards, terms and conditions the activity will be managed as a discretionary activity under Rule 66. The Hearing Panel recommends declining the relief requested.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
61 – Te Rūnanga o Ngāti Ruanui Trust	1145	Amend Submitter seeks amendment to Rule 65 of the Plan to include new and amended standards, terms and conditions to read: [...] <i>(b) the activity does not have an adverse effect on the values associated with <u>cultural and historic heritage identified in Schedule 5 [Cultural and Historic heritage];</u></i> <i>(c) the activity does not have adverse effect on Schedules 1 and 2;</i> <i>(d) the activity does not have any adverse effect on any site identified in 5B [Sites of significance to Māori and associated values] and Appendix 2;</i> <i>(e) the activity does not adversely affect the suitability of the receiving environment for customary use;</i> <i>(f) the activity does not have an adverse effect on any threatened or at risk, or regionally distinctive species, or any rare and uncommon ecosystem type including those identified in Schedule 4A [Significant indigenous biodiversity] and taonga species protected under Taranaki iwi Deed of Settlement including those identified in Schedule 4C [Taonga species and habitat]</i> <i>(g) activity complies with the general standards in Section 8.6 [...]</i>	Accept in part The submitter is seeking amendment to Rule 65 of the Plan to include new and amended standards, terms and conditions. Specific comments on the new and amended proposed conditions are as follows: <ul style="list-style-type: none"> Decline the relief sought in relation to Condition (b). The Hearing Panel refer the submitter to previous comments made on expanding the scope of historic heritage. Decline the relief sought in relation to Condition (c). The Hearing Panel note that the effect of granting this relief would also make this rule redundant as Schedules 1 and 2 capture the whole coastal marine area plus landward parts of the coastal environment identified as having outstanding natural character or being an outstanding natural feature or landscape and it requires no adverse effects (even those less than minor or transitory). Decline the relief sought in relation to Condition (c) and (e) noting that such matters are already addressed under Condition (b) and a new condition addressing taonga species. Grant the relief in kind in relation to Condition (f). The Hearing Panel recommends expanding the scope of Rule conditions to include reference to scheduled taonga species.

Rules 1 to 66			
28 – Grant Knuckey	1150	Amend	Decline
		Amend Rules 1 to 66, as appropriate, to identify/address two new marine spatial management areas – Wahi Tapu Areas and Wahi Taonga Areas.	The Hearing Panel recommends declining the relief sought by the submitter. Refer to submission point 1296 for further information.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Further submissions – Ministry for Primary Industries (16)		Oppose in part	
50 – Te Kāhui o Taranaki Trust	1151	Amend	Decline
		Submitter seeks amendment to all rules in Section 8 of the Plan to provide a new standard/term/condition to read: <i>[...] <u>the activity does not adversely impact on Māori cultural values</u> [...]</i>	All of the rules are subject to the policies within the Plan. Māori cultural values are recognised and provided for in Policy 16 [Relationship of tangata whenua] where it states: <i>Recognise and provide for the relationship of tangata whenua culture, values and traditions within the coastal environment [...]</i> The Hearing Panel recommends declining the relief sought on the basis that it is already provided for and it is unnecessary to reiterate provisions within the Plan where they already apply. The Panel notes that activities will be subject to meeting the requirements of all of the General Policies as well as the relevant Activity-based Policies when being considered through the resource consenting process.
Further submissions – Trans-Tasman Resources (6)		Oppose	
General Standards			
43 – Royal Forest and Bird Protection Society	1152	Amend	Decline
		Submitter seeks amendment to General Standards to include limits for permitted activities for: <ul style="list-style-type: none">• foreshore and seabed disturbance, vegetation disturbance and removal• limits on sediment disturbance and resulting sediment plumes• time periods to avoid removal or disturbance of vegetation during fish spawning to protect eggs until hatching	The requests of the submitter are already addressed within the rules under rules relating the disturbance, deposition and extraction and therefore do not require further iteration within the general standards. The Hearing Panel recommends declining the relief requested as the necessary standards and limits for permitted activities are already addressed in the relevant rules standards, terms and conditions. In addition, the concerns regarding disturbance of vegetation seems to be a matter

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> other limits to avoid adverse effects consistent with Policies 13, 14 and 15 of the NZCPS, and ensure that any other adverse effects are no more than minor. 	concerned with the terrestrial environment and not within the coastal marine area, therefore, not relevant to this particular Plan.
General standards 8.6.2 – Light			
43 – Royal Forest and Bird Protection Society	1153	Amend Submitter seeks amendment to General Standard 8.6.2 [Lights] of the Plan to include: <ul style="list-style-type: none"> standards for lights to be shielded or of a colour so that they do not attract or disturb seabirds new standard to avoid lighting near any seabird, including penguin, breeding areas new standards for navigational aids and safety to mitigate any adverse effects on seabirds. 	Decline The Hearing Panel recommends declining this relief sought by the submitter and note the following: <ul style="list-style-type: none"> General standard 8.6.2 already states that light sources will be shielded except for navigational aids and lights required under the Acts of Parliament. For navigational aids, a shielded light would lessen its effective over long distances and result in higher risks to vessels within the coastal marine area. A further consideration is that light colour is an important identifier of hazards and vessel pathways. Specific colours are required to comply with international regulations and standards. Lights in the coastal marine area are largely used for navigation and safety. As they are in the coastal marine area (and not on land) impacts on penguin breeding areas is likely to be minimal. Navigational aids are critical and ensure the safe passage of vessels within the coastal marine area and avoid incidents at sea, which, in turn are likely to have a much more significant impacts on seabirds and other marine life, e.g. marine oil spills.
Further submissions – Port Taranaki Ltd (32)		Oppose	
60 – Te Kaahui o Rauru	1154	Amend Submitter seeks amendment to General Standard 8.6.2 [Lights] of the Plan to include a limit for biodiversity impacts.	Decline The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel notes that biodiversity impacts will be considered through the consenting process on a case-by-case basis. The Hearing Panel notes that lighting is an important tool for effective and safe movement of vessels within the coastal marine area and in most instances, the benefits of correct lighting will outweigh any adverse effects caused by their use. An example of an adverse effect occurring as a result of incorrect lighting would be a ship wreck or collision causing an oil spill. The adverse environmental effects of

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			such an incident may be higher for biodiversity than the correct operation of navigational aids and lighting within the coastal marine area.
General standards 8.6.3 – Noise			
9 – Karen Pratt	1155	Other	No relief necessary
		Note that the noises limits written in the General Standards for noise would not be able to be complied with should an operation the size of the recently permitted ironsand mining occur in the territorial waters.	Comments noted.
		Further submissions – Trans-Tasman Resources Ltd (6)	
32 – Port Taranaki	1156	Support	Accept
		Retain the noise provisions in the Plan based on implementation of the Port Noise Standard and alignment between the New Plymouth District Plan and the Proposed Coastal Plan provisions as each go through their respective review processes.	Support noted. General Standards 8.6.3 relating to Port activities are retained as notified.
33 – New Zealand Defence Force	1157	Amend	Accept
		Submitter seeks amendment to General Standard 8.6.2(c) of the Plan by removing the provisions within general standards and replacing with standards prepared by the New Zealand Defence Force specifically for temporary military training activities (NZDF standards provided with submission).	<p>The Hearing Panel recommends accepting the relief sought by the submitter.</p> <p>The Hearing Panel agrees with the submitter that the noise provisions set out in General Standard 8.6.2(c) of the Plan, plus revised standards recommended in the Officers' Report would be unnecessarily and excessively restrictive to the submitter from undertaking essential training exercises.</p> <p>The submitter has suggested the inclusion of noise standards prepared specifically to address temporary military training activities and which the submitter has successfully sought to be included in district and regional coastal plans nationally. It is the Hearing Panel's view that the noise standards proposed by the submitter will protect residential amenity values adjoining the coastal marine area.</p> <p>The Hearing Panel notes that the amended standard include new separation distances for activities involving live firing, firing of blanks or explosives, new guidance for helicopter noise as well as amended limits for noise during different time intervals.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
37 – Petroleum Exploration and Production Association of NZ	1158	Other	No relief necessary
		Submitter note the noise limits under (d) from 10pm to 7am is now 40dB LAeq, while under the current Coastal Plan the limit is 45 dBA L10 but are unaware of any issues warranting the proposed stricter condition.	The submitter has not requested any changes to the Plan. However, the Hearing Panel notes that as part of this Plan review, the Council has sought to better align noise provisions with equivalent provisions arising from the New Plymouth district plan review. Notwithstanding that, in response to reliefs sought by submitter 33, noise limits are recommended to be amended that are more aligned with the current Coastal Plan. Refer to submission point 1157 for further information.
43 – Royal Forest and Bird Protection Society	1159	Amend	Decline
		Submitter seeks amendment to General Standard 8.6.2 [Noise] of the Plan to include a specific standard setting out guidance on how appropriate noise standards are to be determined for activities which generate noise in the marine environment that reads as follows (or similar): <u>Considerations of the latest information of the effects of noise of marine species and habitats. The use of the most recent professionally supported noise modelling for the marine environment. Taking a precautionary approach where limited information is available.</u>	The Hearing Panel recommends declining the relief sought by the submitter. The Hearing Panel is concerned that references to the “latest information” and “most recent professionally supported noise modelling for the marine environment” does not provide sufficient clarity for Plan users, is ambiguous and would result in potentially different standards to be applied throughout the life of the Plan. Further, there is often a level of division amongst the scientific community within any area of research, and therefore, may be difficult to determine a “professionally supported” noise model.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	The Hearing Panel notes that the General Standards only apply where a rule explicitly states that the standards apply. Activities to which these General Standards apply have been assessed as generally having less than minor adverse effects.
48 – Taranaki District Health Board	1160	Support	Accept
		Retain General Standards 8.6.3(a), (b) and (c) [Noise] of the Plan as notified.	Support noted. General Standards 8.6.3(a) and (b) are retained as notified subject to minor amendments. The Hearing Panel note that amendments are recommended to General Standard 8.6.3(c) to align with similar noise levels for temporary military training activities adopted in other district plans and coastal plans adopted nationally.
48 – Taranaki District Health Board	1161	Amend	Accept
		Submitter seeks amendment to General Standards 8.6.3(d) [Noise] of the Plan to read:	The amendment retains the intention of the clause but contains language that is more directive and commonly understood. The Hearing Panel recommends granting the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		Noise generated by any other activity in the coastal marine area (excluding those in (a), (b) and (c) above) shall not exceed the following at any point landward of at or beyond the boundary of the coastal marine area: [...]	
9 – Karen Pratt	1161A	Other Note that the noises limits written in the General Standards for noise would not be able to be complied with should an operation the size of the recently permitted ironsand mining occur in the territorial waters.	No relief necessary Comments noted.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	

4.7 Financial contributions, monitoring and review

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Section 9 – Financial contributions			
15 – Surfbreak Protection Society	1162	<p>Other</p> <p>Submitter notes that the use of economic instruments to mitigate adverse effects to surf breaks could be problematic and that surf breaks are finite. Currently there are no manmade structures that can produce surf breaks and suggests that it is imperative that existing breaks should be given a high priority of protection.</p>	<p>No relief necessary</p> <p>Comments noted. Policy 19 provides strong direction and guidance on the protection of surf breaks.</p> <p>The Hearing Panel agrees that surf breaks are finite and that for some values such as surf breaks economic instruments are not necessarily the most appropriate response to avoiding, remedying or mitigating any adverse effects arising from use and development in the coastal marine area. However, economic instruments may be an option for offsetting some adverse effects (where that is appropriate).</p> <p>Economic instruments are implemented only in accordance with Section 9 of the Plan and relevant policies and when other avoidance, mitigation and remedial options have been exhausted.</p>
29 – Department of Conservation	1163	<p>Amend</p> <p>Submitter seeks amendment to Section 9 of the Plan to include a statement that states consideration of whether a coastal occupation charging regime is included in the Plan.</p>	<p>Accept</p> <p>The Council will not be operating a coastal occupation charging regime. Under section 64A [Imposition of coastal occupation charges] of the RMA, the Council must include a statement to explain this. Therefore, the Hearing Panel recommends amending Section 9 to include the following statement:</p> <p><i><u>Note: The Council is not operating a charging regime for occupation of the coastal area.</u></i></p> <p>At the hearing of submissions the submitter presented further on this submission point noting that section 64A identifies other statutory requirements necessary before the relief can be officially adopted by the Council. The Hearing Panel note that steps have been taken to ensure that the correct statutory process is being followed prior to Plan adoption by the Council.</p>
32 – Port Taranaki	1164	<p>Amend</p> <p>Retain Section 9 of the Plan but seek amendment of the heading of Section 9 of the Plan to read:</p> <p><i>9 - Financial contributions <u>and environmental compensation.</u></i></p>	<p>Accept</p> <p>The Hearing Panel agrees to the requested amendment as it more accurately describes the content of this section which is not limited to financial contributions but also includes environmental compensation.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society	1165	Support	Accept
		Submitter supports retaining the note in Section 9.1.1 of the Plan, which recognises that changes to the RMA mean that councils will no longer be able to require financial contributions under the Act from 2022.	Support noted. The note is retained as notified.
	Further submissions – Fonterra (47)	Support in part	
Section 9.1 – Purpose			
2 – Federated Farmers	1166	Support	Accept
		Submitter supports the note in Section 9.1.1 of the Plan. Retain as notified.	Support noted. The note is retained as notified.
32 – Port Taranaki	1167	Amend	No relief necessary
		Submitter seeks amendment to Section 9.1 of the Plan to include wording that provides for environmental compensation to be applied wider afield than the immediate/adjacent site or surrounding area.	<p>Hearing Panel note that Section 9 does not generally require environmental compensation to be applied in the immediate/adjacent site or surrounding area.</p> <p>The majority of situations described in Section 9.1 refer to “<i>the general area</i>” or “<i>locality</i>” and is not confined to “<i>immediate or adjacent sites</i>”. The only exception is Section 9.1.4 [Protection, maintenance or enhancement of visual amenity and landscape] which requires compensation to occur adjacent to the site to address visual amenity impacts. The Hearing Panel considers these conditions to be appropriate and provides the necessary flexibility for Council to consider the effects of consenting a particular activity and the appropriateness of avoidance, mitigation and remediation measures to address adverse environmental effects.</p> <p>On occasion there may be a requirement to offset or mitigate any residual effects. Such matters necessarily need to be considered on a case-by-case basis having regard for the scale of the activity and the nature of the receiving location, including the surrounding landscape.</p>
Sections 9.1.3 – Protection, maintenance or enhancement of biodiversity			
60 – Te Kaahui o Rauru	1168	Amend	Grant in kind
		Submitter seeks amendment to Sections 9.1.3 [Protection, maintenance or enhancement of biodiversity] of the Plan to include the option of financial contributions to improve kaitiakitanga.	The purpose of this section is to set out the criteria by which Council may require financial contributions from consent applicants. The purpose of the financial

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	contributions are confined to giving effect to the objectives and policies of the Plan and, in particular, those values and uses identified in General Policies 1 to 21. Of note, the Hearing Panel considers that there is scope for financial contributions to enhance or restore the habitats of taonga and other species and recommends the inclusion of an additional Clause (c) in section 9.1.5 [Protection, maintenance or restoration of sites of historic importance] that reads as follows: <i>Purpose: To mitigate adverse effects on sites of historic importance by:</i> [...] <u>(c) enhancing or restoring habitat of taonga species.</u>
Section 9.1.5 – Protection, maintenance or restoration of sites of historic importance			
60 – Te Kaahui o Rauru	1169	Amend Submitter seeks further engagement and discussion regarding Section 9.1.5 [Protection, maintenance or restoration of sites of historic importance]. Specifically to widen offset options.	No relief necessary Comments noted. The Hearing Panel considers the current offset options to be reasonable and note that the options should already provide for the appropriate protection of historic heritage, including sites of significance to Māori.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	
Section 9.1.6 – Protection, restoration or enhancement of seabed and foreshore			
60 – Te Kaahui o Rauru	1170	Amend Submitter seeks amendment to Section 9.1.6 [Protection, restoration or enhancement of seabed and foreshore] of the Plan to include the option of improving kaitiakitanga.	Decline The purpose of this section is to set out the criteria by which Council may require financial contributions from consent applicants. The purpose of the financial contributions are confined to giving effect to the objectives and policies of the Plan and, in particular, those values and uses identified in General Policies 1 to 21. There will be occasion when financial contributions addressing those matters set out in Section 9 will also contribute to improving kaitiakitanga. However, the Hearing Panel does not believe it appropriate for the Plan to specify that the purpose of financial contributions to address resource management effects in the coastal marine area should be <u>specifically</u> to enhance kaitiakitanga. Such matters are implicit given the matters of consideration.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Section 9.1.8 – General – environmental compensation			
43 – Royal Forest and Bird Protection Society	1171	<p>Amend</p> <p>The submitter is uncertain as to how these provisions are to be applied and states that it is not appropriate to consider compensation for adverse effects which are to be avoided under the <i>New Zealand Coastal Policy Statement</i>. The submitter suggests compensation does not achieve protection of the values and characteristics to be protected. There must be limits to compensation to give effect to the <i>New Zealand Coastal Policy Statement</i>.</p> <p>Submitter seeks amendment to the Plan by deleting Section 9.1.8 [General environmental compensation]:</p> <p>9.1.8 General – environmental compensation</p> <p>Purpose: To provide environmental compensation where an activity will have adverse effects, which will not be adequately avoided, remedied or mitigated by protecting, restoring and/or enhancing natural and physical resources and/or amenity values elsewhere in the coastal environment in the same general locality.</p>	<p>Decline</p> <p>The submitter's comments are noted. However, the Hearing Panel notes that environmental compensation is still subject to the objectives and policies of the Plan, which provide varying levels of protection including avoidance type policies. Environmental compensation cannot be considered in lieu of compliance with those policies.</p> <p>The Hearing Panel recommends declining the relief sought. Environmental compensation may be a useful tool for activities unable to avoid adverse effects. This may be the case for necessary developments, upgrade or the placement of regionally important infrastructure which is provided for under the <i>Regional Policy Statement</i> (Section 15.2 [Providing for regionally significant infrastructure]). Further, the <i>New Zealand Coastal Policy Statement</i> does not require avoidance of <u>all</u> adverse effects. In such instances the Council may be required to "avoid significant adverse effects" or to "have regard to". This language may introduce instances where financial contributions are appropriate, acceptable, reasonable and recommended.</p> <p>It is important to recognise that these compensations can only be implemented when the policies within the Plan permit. The Hearing Panel considers the policies within the Plan to be strong and to uphold the requirements of the <i>New Zealand Coastal Policy Statement</i> and therefore the compensations provided for here will be in alignment with requirements of the <i>New Zealand Coastal Policy Statement</i>.</p>
Further submissions – Trans-Tasman Resources Ltd (6), Port Taranaki Ltd (32)		<p>Oppose</p>	
Section 9.2 and 9.2.6 – Determining a financial contribution			
60 – Te Kaahui o Rauru	1172	<p>Other</p> <p>Submitter seeks further clarification on Section 9.2 of the Plan on the use of financial contributions and their application</p> <p>AND</p> <p>Seek further engagement and discussion regarding Section 9.2.6 specifically to clarify whether it is the intention to aim for full mitigation or compensation in general, although that may not always be achieved.</p>	<p>No relief necessary</p> <p>The use of financial contributions will be tailored to the consent activity on a case-by-case basis having regard for the likely effects and in accordance with Plan policies.</p> <p>Full mitigation is a desirable outcome. However, the Hearing Panel recognises that this may not be achievable in all circumstances. Compensation is a way of recognising and providing for instances where full mitigation is not possible or is only partially possible. Section 9.2.6 provides for these instances so is a provision</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			for compensation in general, however, it is preferable to mitigate in full if/where possible.
Section 9.2.1 –Matters to be considered			
60 – Te Kaahui o Rauru	1173	Other	No relief necessary The Hearing Panel note that consideration of community effects encompasses cultural effects, amongst other things, and will recognise and take into consideration any possible cultural effects.
		Submitter seeks clarification within Section 9.2.1 of the Plan to specify whether “community effects” is considered under cultural effects.	
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)	Support		
Section 10.1 – Monitoring			
41 – Te Korowai o Ngāruahine Trust	1174	Amend	Accept This section specifically describes how the Council will determine the effectiveness of the Plan through ongoing monitoring and evaluation processes. The Council is not currently in a position to implement any monitoring programmes that include elements of māuri values or the application of mātauranga Māori but will be seeking to engage with local iwi and hapū to investigate the development of such a system. The Hearing Panel recommends granting the relief sought by the submitter by including a new Clause (3A) in Section 10.1 of the Plan that reads as follows: <u><i>3A. Investigate, develop and implement appropriate and relevant monitoring methods for the incorporation of mātauranga Māori into state of the environment monitoring for the coastal environment.</i></u>
		Submitter seeks amendment to Section 10.1 of the Plan to include a specific method about engaging in dialogue with iwi in order to understand perceptions and values, and the application of mātauranga Māori.	
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)	Support		
50 – Te Kāhui o Taranaki Trust	1175	Amend	Accept in part There are two elements in relation to the relief sought by the submitter. In relation to the development of a mātauranga Te Ao Māori monitoring system in partnership with Iwi, the Hearing Panel agrees to the relief sought by including a new Clause (3A) in Section 10.1 of the Plan that reads as follows:
		Submitter seeks amendment to Section 10.1 of the Plan to include the following new monitoring methods: <ul style="list-style-type: none">development of a mātauranga Te Ao Māori monitoring system in partnership with iwi	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> annual review in partnership with Iwi of the effectiveness of a co-designed and resourced Memorandum of Understanding, Mana Whakahono a Rohe Agreement and policy and consent processes. 	<u>3A. Investigate, develop and implement appropriate and relevant monitoring methods for the incorporation of mātauranga Māori into state of the environment monitoring for the coastal environment.</u>
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Korowai o Ngāruahine Trust (41), Te Atiawa (58)		Support	<p>In relation to a new method to undertake an annual review of the effectiveness of a co-designed and a resourced Memorandum of Understanding and Mana Whakahono a Rohe Agreement, the Hearing Panel does not recommend granting the relief sought.</p> <p>The Hearing Panel is advised that the Council are hopeful that a Memorandum of Understanding or Mana Whakahono a Rohe agreements will be implemented in the future. However, at this point in time, there are no such agreements and it is not considered appropriate to pre-empt the outcomes of those agreements, including operational details around the scope and timeframes for implementing particular aspects of those agreements, by including such detail in the Plan.</p>
60 – Te Kaahui o Rauru	1176	Amend <p>The procedures for a review programme should include specific mention of reviewing achievement of conditions to iwi and Māori values.</p> <p>Submitter seeks amendment to Section 10.1 of the Plan to include Māori values as a focus point in monitoring.</p>	Accept <p>The Hearing Panel notes Implementation Method 30 of the Plan, which states that the Council will work with iwi authorities to develop memoranda of understanding that establish and maintain an effective working relationship. In particular, Mana Whakahono a Rohe agreements between the Council and iwi represent an opportunity to set out agreements on Council/iwi relationship, including any requirements to review and report on the achievement of consent conditions relating to tangata whenua values.</p> <p>Section 10.1 of the Plan specifically describes how the Council will determine the effectiveness of the Plan through ongoing monitoring and evaluation processes. The Council is not currently in a position to implement any monitoring programmes that include elements of māuri values or the application of mātauranga Māori but will be seeking to engage with local iwi and hapū to investigate the development of such a systems.</p> <p>The Hearing Panel recommends granting the relief sought by the submitter by including a new Clause (3A) in Section 10.1 of the Plan that reads as follows</p> <p><u>3A. Investigate, develop and implement appropriate and relevant monitoring methods for the incorporation of mātauranga Māori into state of the environment monitoring for the coastal environment.</u></p>

4.8 Definitions

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definitions – General			
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1177	Support	Accept Definitions for “ <i>best practicable option</i> ”, “ <i>coastal marine area</i> ”, “ <i>common marine and coastal areas</i> ”, “ <i>discharge</i> ”, “ <i>environment</i> ”, “ <i>structure</i> ”, and “ <i>industrial or trade premises</i> ” are retained as notified.
		Retain the RMA definitions such as “ <i>best practicable option</i> ”, “ <i>coastal marine area</i> ”, “ <i>common marine and coastal areas</i> ”, “ <i>discharge</i> ”, “ <i>environment</i> ”, “ <i>structure</i> ”, and “ <i>industrial or trade premises</i> ”.	
Further submissions – Port Taranaki Ltd (32)	Support		
Definition – Accretion			
43 – Royal Forest and Bird Protection Society	1178	Amend	Accept Within the Plan, accretion is mentioned once in Policy 32 [Placement of structures] and therefore has been defined to assist in the interpretation and application of that Policy. The Hearing Panel agrees with the submitter that accretion is related to natural processes and recommend amending the definition of “ <i>accretion</i> ” to read: Accretion means the seaward extension of land as a result <u>of the natural process of deposition of sediments</u> .
		Submitter notes that “ <i>accretion</i> ” is not provided for in the rules and that the definition should be amended to clarify that the term relates to the natural processes. It is suggested that, as worded, the definition could include deposition resulting from reclamation. Submitter seeks amendment to the definition of “ <i>accretion</i> ” to clarify that accretion is a result of natural processes.	
Definition – Adaptive management			
6 – Trans-Tasman Resources Ltd	1179	Amend	Decline Recent case law has highlighted adaptive management as an inappropriate method of managing activities that may produce impacts that are uncertain, little understood or potentially significantly adverse. As a result, the Hearing Panel recommends removing reference to adaptive management from the Plan entirely, including the definition of adaptive management.
		Submitter seeks amendment to the term “ <i>adaptive management</i> ” to read: <i>Adaptive management means a structured, iterative process of robust decision making in the face of uncertainty, <u>which includes allowing an activity to commence on a small scale or for a short period so that its effects can be assessed and a decision made about the appropriateness of continuing the activity (with or without amendment) on the basis of those effects with an aim to reducing uncertainty over time via system monitoring.</u> For the purposes of this Plan, the principles underpinning adaptive management include:</i>	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		(a) robust baseline monitoring to <u>good baseline information to</u> establish the existing receiving environment; (b) resource consent conditions that require <u>provide for</u> effective monitoring of adverse effects using appropriate indicators; [...]	
Further submissions – Royal Forest and Bird Protection Society (43), Rūnanga o Ngāti Ruanui Trust (61)		Oppose	
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Support in part	
29 – Department of Conservation	1180	Support Retain the definition “adaptive management” as notified.	Decline Recent case law has highlighted adaptive management as an inappropriate method of managing activities that may produce impacts that are uncertain, little understood or potentially significantly adverse. As a result, the Hearing Panel recommends removing reference to adaptive management from the Plan entirely, including the definition of adaptive management.
Further submissions – Meridian Energy Ltd (20), Port Taranaki Ltd (32)		Support	
43 – Royal Forest and Bird Protection Society	1181	Amend The submitter requests reference to “adaptive management” be deleted from Policy 3 and also seeks the deletion of the definition of adaptive management from the Plan.	Accept Recent case law has highlighted adaptive management as an inappropriate method of managing activities that may produce impacts that are uncertain, little understood or potentially significantly adverse. As a result, the Hearing Panel recommends removing reference to adaptive management from the Plan entirely, including the definition of adaptive management as requested by the submitter.
NEW Definition – Alteration			
57 – Heritage New Zealand	1182	Amend Alteration is referred to in a number of rules relating to structures in the coastal environment. This term can be interpreted in a variety of ways, so a specific definition would aid in Plan interpretation. Submitter seeks amendment to the Plan to include a new definition for “alteration” to read: <u>Alteration, in relation to buildings, means any changes to the fabric or characteristics of a structure involving, but not limited to, the removal and replacement of walls, windows, ceilings, floors or roofs, either internally or</u>	Accept in part The Hearing Panels agrees that the interpretation and application of the Plan, particularly in relation to rules addressing structures in the coastal marine area, would be improved by defining the term “alteration”. The Panel notes that alteration may apply to many types of structures and is not restricted to buildings, therefore, for the purpose of the Plan, reads as follows: <u>Alteration in relation to a structure, means any modification to a structure that does not increase its external dimensions.</u>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>externally and includes any sign attached to the structure. In relation to structures, means any changes to function, layout, or appearance of a structure without changing its physical dimensions.</u>	The Hearing Panel notes that change to the external dimensions of a structure is defined through the term "extension" which the Panel suggests should also be included within the definitions section for consistency. The definition of "extension" reads: <u>Extension in relation to a structure, means any modification to the external dimensions of a structure, including length, width and height.</u>
Further submissions – Port Taranaki Ltd (32), Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose	
Definition – Amenity values			
43 – Royal Forest and Bird Protection Society	1183	Amend The submitter seeks clarity on whether "amenity values" includes visual amenity so that the areas identified in Policy 18 are recognised under the <i>National Environmental Standard for Plantation Forestry</i> and seeks that, if it does not include visual amenity, that the definition be amended to include visual amenity as part of amenity values.	Decline Under the <i>National Environmental Standard for Plantation Forestry</i> , visual amenity landscape means: "a landscape or landscape feature that – (a) is identified in a district plan as having visual amenity values, however described; and (b) is identified in the policy statement or plan by its location, including by a map, a schedule, or a description of the area." The Hearing Panel recommends declining the request to amend the definition of "amenity values". The term "amenity values" is defined by the RMA and the Hearing Panel does not consider it appropriate to amend the statutory definition. In addition, the Panel notes that the use of "landscapes" in the suggested amendment provides a different meaning and the application of the term "amenity values" meaning that only landscapes identified in plans or policy statements can be considered to have any amenity values, significantly reduces the locations where Policy 18 can be applied within the Plan. Notwithstanding the above, visual amenity is already implied within the current definition being a quality that contributes to "people's appreciation of its pleasantness and aesthetic coherence".
Further submissions – Meridian Energy Ltd (20), Port Taranaki Ltd (32)		Oppose	
Definition – Biofouling			
16 – Ministry for Primary Industries	1184	Amend Submitter seeks amendment to the definition of "biofouling" to include the following words after aquatic environment:	Grant in kind The Hearing Panel recommends accepting the inclusion of definitions for macrofouling and microfouling but propose an alternative relief to that sought by

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<ul style="list-style-type: none"> "microfouling" – a layer of microscopic organisms including bacteria and diatoms and the slimy substances they produce, Often referred to as a 'slime layer', microfouling can usually be removed by gently passing a finger over the surface. "macrofouling" – any organism not included in the definition of "microfouling". 	<p>the submitter. The Hearing Panel suggests that the appropriate location of these definitions is not within the definition of biofouling and that each term should have its own, stand-alone definition following the alphabetical listing order that is within this section of the Plan and that the definition for "biofouling" should remain as notified.</p> <p>Refer to new definitions for macrofouling and microfouling within this section.</p>
Further submissions – Trans-Tasman Resources Ltd (6)		Neutral	
Further submissions – Port Taranaki Ltd (32)		Oppose	
33 – New Zealand Defence Force	1185	Support	Accept
		Retain the definition of "biofouling" as notified.	Definition of biofouling is retained as notified.

Further submissions – Port Taranaki Ltd (32)		Oppose in part	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
45 – Powerco	1187	Amend Submitter seeks amendment to the Plan by mapping the coastal environment line for Taranaki and referencing this in an amended definition of “coastal environment” to read: <i>Coastal environment means the areas where coastal processes, influences or qualities are significant, including lakes, lagoons, tidal estuaries, saltmarshes, coastal wetlands, and the margins of these and includes all of the coastal marine areas, <u>land inland to the point defined on the maps at Schedule X, the natural and physical resources within it, and the atmosphere above it.</u></i>	Accept The Hearing Panel recommends including an indicative coastal environment line into the coastal mapping layers to help establish the extent of the coastal environment and to amend the definition of “coastal environment”. However, the Panel notes that this line is only an indicative line and the range of coastal processes captured in the original definition may still apply and may be relevant for determining on a case-by-case basis, whether or not an activity affects the coastal environment. The amended definition would read as follows: Coastal environment means: <u>(a) all of the coastal marine area; and</u> <u>(b) areas landward of the coastal marine area and identified under Policy 4.</u> The Hearing Panel also recommends additional consequential amendments to the Plan, including amendments to associated planning maps to identify the coastal environment line that are aligned with the coastal environment line identified in a district plan or proposed district plan (or their equivalent).

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Definition – Data deficient			
43 – Royal Forest and Bird Protection Society	1189	Amend	Accept
		Submitter seeks amendment to the Plan to include a new definition for “ <i>data deficient</i> ” species which are likely to be at risk or threatened however populations are so low that information is not available to determine status under the NZ Threat Classification.	The Hearing Panel recommends including a new definition for “ <i>data deficient species</i> ” to read: <i>Data deficient species means those species that are likely to be at risk or threatened, however, populations are so low that information is not available to determine their status under the New Zealand Threat Classification. This includes but is not limited to, species identified as such in Schedule 4A.</i>

Definition – Disturbance			
43 – Royal Forest and Bird Protection Society	1190	Support	Accept
		Retain definition of “ <i>disturbance</i> ” as notified.	Support noted. Definition of “ <i>disturbance</i> ” is retained as currently notified.
Definition – Ecosystem			
43 – Royal Forest and Bird Protection Society	1191	Support	Accept
		Retain definition of “ <i>ecosystem</i> ” as notified.	Support noted. Definition of “ <i>ecosystem</i> ” is retained as currently notified.
Definition – Erosion			
43 – Royal Forest and Bird Protection Society	1192	Support	Accept
		Retain definition of “ <i>erosion</i> ” as notified.	Support noted. Definition of “ <i>erosion</i> ” is retained as currently notified.
Definition – Estuary Modified			
29 – Department of Conservation	1193	Amend	Accept
		Submitter seeks amendment to the definition of “ <i>Estuary Modified</i> ” to read: <i>[...] means the coastal management area identified in Schedule 1 of the Plan, as the Pātea, Waiwhakaiho or Waitara Estuaries and their outlets, and which are surrounded by urban, extensively modified environments.</i>	The Hearing Panel recommend amending the definition of Estuaries Unmodified, with a minor word change to maintain consistency with the RMA and the <i>Regional Policy Statement for Taranaki</i> . The amended definition would read as follows:

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<i>Estuaries Modified refers to the coastal management area identified in Schedule 1 of the Plan, as the Pātea, Waiwhakaiho or Waitara Estuaries <u>and river mouths</u>, and which are surrounded by extensively modified environments.</i>
43 – Royal Forest and Bird Protection Society	1194	<p>Amend</p> <p>Submitter seeks amendment to the definition of “<i>Estuary Modified</i>” to reflect other reliefs sought by the submitter in relation to Policy 1.</p>	<p>Accept in part</p> <p>The Hearing Panel recommend amending the definition of Estuaries Unmodified, with a minor word change to maintain consistency with the RMA and the <i>Regional Policy Statement for Taranaki</i>.</p> <p>The amended definition would read as follows:</p> <p><i>Estuaries Modified refers to the coastal management area identified in Schedule 1 of the Plan, as the Pātea, Waiwhakaiho or Waitara Estuaries <u>and river mouths</u>, and which are surrounded by extensively modified environments.</i></p>
Definition – Estuary Unmodified			
29 – Department of Conservation	1195	<p>Amend</p> <p>The submitter seeks amendment to the definition of “<i>Estuary Unmodified</i>” to read: [...] refers to estuaries identified in Schedule 1 of the Plan, <u>and their outlets</u> that are permanently open to tidal movements and are characteristically largely unmodified.</p>	<p>Accept in part</p> <p>The Hearing Panel recommend amending the definition of Estuaries Unmodified, with a minor word change to maintain consistency with the RMA and the <i>Regional Policy Statement for Taranaki</i>.</p> <p>The amended definition would read as follows:</p> <p><i>Estuaries unmodified refers to estuaries <u>and river mouths</u> identified in Schedule 1 of the Plan, that are permanently open to tidal movements and are characteristically largely unmodified.</i></p>
43 – Royal Forest and Bird Protection Society	1196	<p>Amend</p> <p>Submitter seeks amendment to the definition of “<i>Estuary Unmodified</i>” to reflect other reliefs sought by submitter in relation to Policy 1.</p>	<p>Decline</p> <p>The Hearing Panel recommends retaining the definition of “<i>Estuaries Unmodified</i>” subject to minor amendments sought by other submitters. Refer to recommendations on Policy 1.</p>
NEW definition – Functional need			
26 – Transpower NZ Ltd	1197	<p>Amend</p> <p>Amend Plan to include a new definition for “<i>functional need</i>” to read: <u>The locational, operational, practical or technical needs of an activity, including development and upgrades.</u></p>	<p>Accept</p> <p>The Hearing Panel recommends including a definition for “<i>functional need</i>” but noting that the definition must be aligned with the <i>National Planning Standards 2019</i>.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Meridian Energy Ltd (20)		Support	<p>The definition would read as follows:</p> <p><u>Functional need means the need for a proposal of activity to traverse, locate or operate in a particular environment because the activity can only occur in that environment.</u></p>

Definition – Habitat			
43 – Royal Forest and Bird Protection Society	1201	Support	Accept
		Retain definition of “ <i>habitat</i> ” as notified.	Support noted. Definition of “ <i>habitat</i> ” is retained as currently notified.
Definition – Hapū			
42 – Ngati Rahiri Hapū	1202	Amend	Accept
		Submitter seek amendment to the definition of “ <i>hapū</i> ” to specify: [...] <i>families of people of Māori descent</i> .	<p>The definition of hapū was originally taken from the <i>Regional Policy Statement</i> and was adopted in this instance to maintain consistency with this and other regional plans. However, the Hearing Panel agrees that the relief sought provides important detail that aids in the understanding of the definition. Over time the Council will update and align the definitions that have changed across different planning documents.</p> <p>The Hearing Panel recommends amending the definition to read: Hapū means sub-tribe, usually a number of whanau (families) <i>of people of Māori descent</i> with a common ancestor.</p>
Definition – Hard protection structure			
43 – Royal Forest and Bird Protection Society	1203	Support	Accept
		Retain definition of “ <i>hard protection structure</i> ” as notified.	Support noted. Definition of “ <i>hard protection structure</i> ” is retained as currently notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Hazardous substance			
43 – Royal Forest and Bird Protection Society	1204	Support	Accept
		Retain definition of “ <i>hazardous substance</i> ” as notified.	Support noted. Definition of “ <i>hazardous substance</i> ” is retained as currently notified.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1205	Support	Accept
		Retain definition of “ <i>hazardous substances</i> ” as notified.	Support noted. Definition of “ <i>hazardous substance</i> ” is retained as currently notified.
Definition – Heritage values			
43 – Royal Forest and Bird Protection Society	1206	Other	No relief necessary
		Submitter seeks clarification on whether definition of “ <i>heritage values</i> ” includes natural heritage values.	The Hearing Panel notes that, depending upon context, “ <i>heritage values</i> ” does include natural heritage values.
Definition – Historic heritage			
42 – Ngati Rahiri Hapū	1207	Amend	Decline
		Submitter seeks amendment of the Plan to include the currently accepted definition of waahi taonga (Treasured Place) and requests amendment to (b)(iii) of the definition for “historic heritage” to read : [...] (b)(iii) sites of significance to Māori, including waahi tapu, <u>and waahi taonga</u> ; and [...]	The submitter comments that while the RMA generally includes sites of significance under the definition of “historic heritage”, the submitter believes this to be a too broad approach to their sites. It is their view that Environment Court case law has eroded the definition of traditional waahi tapu sites, to such an extent that waahi tapu are now no more than isolated and very small areas of land. The submitter further points out, the current definition for historic heritage is given by the RMA and dictates the current definition of historic heritage. The Hearing Panel notes the submitter’s comments but do not believe it appropriate to deviate from the legislative definition. However, the Panel notes that, in an effort to recognise wider cultural values associated with sites of significance to Māori, both wāhi tapu and wāhi taonga sites have been identified within the Plan and both of these terms have received their own definitions.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Incidental water			
43 – Royal Forest and Bird Protection Society	1208	Support	Accept
		Retain definition of “ <i>incidental water</i> ” as notified.	Support noted. Definition of “ <i>incidental water</i> ” is retained as currently notified.
NEW Definition – Industrial or trade site			
42 – Ngati Rahiri Hapū	1209	Amend	Decline
		This definition is not included in the Plan, however, “ <i>industrial or trade premises</i> ” is. The submitter believes that there is far more chance of problems happening with a “ <i>site</i> ” than with a “ <i>premise</i> ” so would like to see this definition added. Amend Plan to include a definition of “industrial or trade site”.	The definition of “ <i>industrial or trade premises</i> ” is taken from the RMA The definition has a wide application that also covers industrial or trade “sites” although this is not explicitly recognised. The Hearing Panel does not consider it necessary to include a new definition when the location in question has already been provided for under the original definition.
Definition – Integrated management			
43 – Royal Forest and Bird Protection Society	1210	Amend	Accept
		Submitter seeks amendment to the Plan by deleting definition of “ <i>integrated management</i> ”.	The submitter comments that it is not clear whether the Plan definition of “ <i>integrated management</i> ” is consistent with Policy 2. The submitter suggests that it is not necessary to have a definition as this is more appropriately set out in Policy 2 of the Plan to give effect to the <i>New Zealand Coastal Policy Statement</i> . The Hearing Panel agrees with the submitter and considers that Policy 2 sets out the necessary and appropriate direction for Plan users. The Panel recommends deleting the definition for ‘ <i>integrated management</i> ’.
Definition – Land			
42 – Ngati Rahiri Hapū	1211	Amend	Accept in part
		Submitter seeks amendment to the definition of “ <i>land</i> ” to include everything below the surface as well as above the surface.	The Hearing Panel recommends amending the definition of “ <i>land</i> ” to reflect previous amendments to that definition in the RMA. However, Hearing Panel notes that the statutory definition must prevail. Within this definition it refers to land covered by water and it is implicit that this covers all area above and below the surface. The amended definition reads: <i>Land</i> –

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p><u>(a) includes land covered by water and the airspace above the land; and</u></p> <p><u>(b) in a national environmental standard dealing with a regional council function under section 30 or a regional rule, does not include the bed of a lake or river; and</u></p> <p><u>(c) in a national environmental standard dealing with a territorial authority function under section 31 or a district rule, includes the surface of water in a lake or river.</u></p>
NEW Definition – Macrofouling			
29 – Department of Conservation	1212	<p>Amend</p> <p>Submitter seeks amendment to the Plan by including a new definition of “macrofouling” that reads:</p> <p><u>Macrofouling - is any organism not included in the definition of microfouling.</u></p>	<p>Accept</p> <p>The Hearing Panel recommends accepting the requested relief as it provides further clarity for Plan users and is consistent with additional relief requested by other submitters.</p> <p>The new definition of “macrofouling” would read as follows:</p> <p><u>Macrofouling is any biofouling organism not included in the definition of microfouling.</u></p>
Definition – Maintenance			
43 – Royal Forest and Bird Protection Society	1213	<p>Amend</p> <p>Submitter seeks amendment to the definition of “maintenance” to read:</p> <p><i>Maintenance in relation to structures, includes activities which restore a structure or asset to its original authorised standard and purpose, and where the character, intensity and scale of the structure, asset or site remains the same or similar. It excludes the extension or repair of structures or assets, or change in location.</i></p> <p>AND</p> <p>Amend all rules which provide for “maintenance and repair” to only use the term “maintenance”.</p> <p>Amend all rules which provide for “alteration or extension” in the same rule as “maintenance” to “minor alteration or extension”.</p> <p>Amend all rules which provide for new structures to include “major alteration or extension”.</p>	<p>Grant in kind</p> <p>The submitter comments that the definition is generally helpful, however, believes that the exclusion of repair is confusing. The definition includes restore which is equivalent to repair. Also the Oxford online dictionary defines “maintain” as to “keep (a building, machine, or road) in good condition by checking or repairing it regularly.”</p> <p>The submitter supports the exclusion of “extension”; however they are not clear how this relates to Policy 37 which provides for “major alterations and extensions”. The Oxford dictionary defines “extension” as to enlarge or prolong something. As such it would generally fit with the policy requirements for “major upgrades”.</p> <p>In the submitter’s view, the Plan could provide for minor alterations or extensions in the same rules for “maintenance”, however, major alterations or extensions must be considered under separate rules which enable adequate consideration of effects.</p> <p>The Hearing Panel recommend largely giving effect to the relief sought by the submitter by an alternative relief involving reframing the maintenance, alteration, extension and removal rules (to more clearly differentiate between the respective</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
			<p>activities based upon changes in their external dimensions). Consequential changes are also proposed to the Plan definition for “maintenance” and with new definitions for “alteration” and “extension” also proposed.</p> <p>The definition of “maintenance” has been reworded to better reflect the scope of the term and reads as follows:</p> <p><u>Maintenance includes the ongoing and regular activities that aid in the preservation of a structure and includes repair works conducted for the purpose of keeping the structure in good condition and/or working efficiently and where the character, intensity and scale of the structure remains the same.</u></p>
45 – Powerco	1214	<p>Amend</p> <p>Submitter comments that much of the maintenance work taken by the submitter arises when it has to replace old equipment with the modern equivalent or to replace a piece of equipment that is no longer working or is a safety risk. In requiring maintenance activities to restore an asset to its original authorised standard, the inference is that maintenance which is required to bring a standard up to a new standard is not provided for. This is opposed but could be readily addressed by amending the definition of “maintenance”.</p> <p>Submitter seeks amendment to the definition of “maintenance” to read:</p> <p><i>Maintenance in relation to structures, includes <u>replacement, repair, or renewal</u>, activities <u>for the purpose of keeping a structure in good condition and/or working efficiently</u> which restore a structure or asset to its original authorised standard and purpose, and where the character, intensity and scale of the structure, <u>or asset or site</u> remains the same or similar. <u>In relation to network utilities it includes the addition of extra lines.</u> It excludes the extension or repair of structures or assets, or change in location.</i></p>	<p>Grant in kind</p> <p>The Hearing Panel notes that the distinction between a maintenance activities and alteration activities may overlap in some instances, however, do not recommend including alteration within the definition of maintenance. The Hearing Panel recommends that definitions differentiate between ‘maintenance’ and ‘alteration’. These definitions align with relevant rules, particularly Rules 35 to 43.</p> <p>The Hearing Panel recommends the definition for “maintenance” read as follows:</p> <p><u>Maintenance in relation to a structure, means the ongoing and regular activities that aid in the preservation of a structure and includes repair works conducted for the purpose of keeping the structure in good condition and/or working efficiently and where the character, intensity and scale of the structure remains the same.</u></p> <p>The Hearing Panel further notes that alterations may not be restricted to alterations completed in order to bring a piece of equipment up to a new standard and there may be other reasons for altering a structure and may include other modifications for other purposes. The Panel considers that it is appropriate to leave the definition broad so that it can be applied to other scenarios. For the purpose of the Plan, the Panel recommends that the definition of alteration read as follows:</p> <p><u>Alteration, in relation to a structure, means any modification to a structure that does not increase its external dimensions.</u></p>

Definition – Maintenance dredging			
43 – Royal Forest and Bird Protection Society	1217	<p>Support</p> <p>Retain definition of “maintenance dredging” as notified.</p>	<p>Accept</p> <p>Definition of “maintenance dredging” is retained as notified.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Definition – Major alteration or extension			
43 – Royal Forest and Bird Protection Society	1218	Amend Submitter seeks amendment to the Plan to include a new definition of “ <i>major alteration or extension</i> ” to mean any alteration or extension of a structure which does not meet the definition of a minor alteration or extension.	Accept in part The Hearing Panel recommends giving partial relief to the request sought by the submitter involving reframing the maintenance, alterations, extensions and removal rules (to more clearly differentiate between the respective activities based upon changes in their external dimensions). Consequential changes are also proposed to the Plan definition for ‘ <i>maintenance</i> ’ and with new definitions for ‘ <i>alteration</i> ’ and ‘ <i>extension</i> ’ also proposed. However, the Hearing Panel does not believe it is necessary to include a definition for “ <i>major alteration</i> ”. The Panel suggests that the distinction between major and minor alterations is determinable through the individual reading of relevant rules. The Hearing Panel recommends that the following new definitions of “ <i>alteration</i> ” and “ <i>extension</i> ” be included in the Plan to read as follows: <u>Extension in relation to a structure, means any modification to the external dimensions of a structure, including length, width and height.</u> <u>Alteration in relation to a structure, means any modification to a structure that does not increase its external dimensions.</u>

Definition – Military training			
33 – New Zealand Defence Force	1222	<p>Support</p> <p>Retain the definition of “military training” as notified.</p>	<p>Accept in part</p> <p>Definition of “military training” is retained subject to amendments to align the Plan with the definition for ‘temporary military training activities’ within the <i>National Planning Standards 2019</i> to read:</p> <p><u>Temporary military training activity means a temporary activity undertaken for the training of any component of the New Zealand Defence Force (including with allied forces) for any defence purpose. Defence purposes are those purposes for which a defence force may be raised and maintained under section 5 of the Defence Act 1990 which are:</u></p> <p><u>(a) the defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;</u></p> <p><u>(b) the protection of the interests of New Zealand, whether in New Zealand or elsewhere;</u></p> <p><u>(c) the contribution of forces under collective security threats, agreements, or arrangements;</u></p> <p><u>(d) the contribution of forces to, or for any of the purpose of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;</u></p> <p><u>(e) the provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency;</u></p> <p><u>(f) the provision of any public service.</u></p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Definition – Minor alteration or extension			
43 – Royal Forest and Bird Protection Society	1223	Amend	Accept in part The Hearing Panel recommends giving partial relief to the request sought by the submitter involving reframing the maintenance, alterations, extensions and removal rules of the Plan (to more clearly differentiate between the respective activities based upon changes in their external dimensions). Consequential changes are also proposed to the Plan definition for “ <i>maintenance</i> ” and with new definitions for “ <i>alteration</i> ” and “ <i>extension</i> ” also proposed. However, the Hearing Panel does not believe it is necessary to include a definition. Use of the term minor alteration is only used within Rule 35 of the Plan. This rule includes a number of standards, terms and conditions that establish the parameters for what would be considered ‘minor’. The Hearing Panel notes that activities that do not fit these standards, terms and conditions would not be considered to be ‘minor’ and would be considered under another rule. The Hearing Panel recommends that the following new definitions of “ <i>alteration</i> ” and “ <i>extension</i> ” be included in the Plan to read as follows: <u>Extension in relation to a structure, means any modification to the external dimensions of a structure, including length, width and height.</u> <u>Alteration in relation to a structure, means any modification to a structure that does not increase its external dimensions.</u>
		Submitter seeks amendment to the Plan to include a new definition of “ <i>minor alteration or extension</i> ” to read: <u><i>Minor alteration or extension means, the alteration of a structure where the alteration or extension is within the same footprint, does not result in an increase in adverse effects over effects generated from the operation and maintenance of the structure.</i></u>	
Further submissions – Port Taranaki Ltd (32)		Oppose	
Further submissions – Powerco (45)		Oppose in part	
Definition – Natural			
43 – Royal Forest and Bird Protection Society	1224	Support	Accept
		Retain the definition of “ <i>natural</i> ” as notified.	Definition of “ <i>natural</i> ” is retained as notified.
Definition – Natural Character			
29 – Department of Conservation	1225	Amend	Decline
		Submitter seeks amendment to the definition of “ <i>natural character</i> ” to better reflect Policy 13 of the <i>New Zealand Coastal Policy Statement</i> .	The Hearing Panel recommends declining the relief sought by the submitter.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Meridian Energy Ltd (20)		Support	<p>The Hearing Panel notes that the proposed definition of natural character would encompass all of the qualities identified in Policy 13 of the <i>New Zealand Coastal Policy Statement</i> and that Policy 13 is not an exhaustive list but merely identifies some characteristics that <u>may</u> (emphasis added) be recognised as natural character. For this reason, the Panel considers that a more generic and broader definition than that sought by the submitter is required in order to avoid a verbose Plan and the inclusion of an unnecessarily lengthy definition that do not capture all of the possible characteristics.</p> <p>The Hearing Panel notes that all of the characteristics listed in Policy 13 of the <i>New Zealand Coastal Policy Statement</i> are either natural elements, patterns or process or are the experiential perceptions of those processes.</p>
Further submissions – Port Taranaki Ltd (32)		Support in part	
Further submissions – Powerco (45)		Oppose	
43 – Royal Forest and Bird Protection Society	1226	<p>Amend</p> <p>Submitter seeks amendment to the definition of “<i>natural character</i>” to include in the definition that protection of natural character of the coastal environment is set out in Policy 13 of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter and notes that protection of natural character introduces elements that are not appropriate to be included within a definition. The Panel notes that a definition should be limited to a statement of the exact meaning of a word as it applies to the Plan.</p> <p>In addition, protection of natural character, as required by the <i>New Zealand Coastal Policy Statement</i>, is provided for within this Plan and is not solely confined to the <i>New Zealand Coastal Policy Statement</i>. This Plan recognises and gives effect to Policy 13 of the <i>New Zealand Coastal Policy Statement</i> in a number of ways and areas within the Plan such as the objectives and policies including (but not limited to) Objective 6 [Natural character], Policy 9 [Natural character and natural features and landscapes] and Policy 10 [Restoration of natural character].</p> <p>The Hearing Panel further recommends against cross referencing external documents within the definitions as this creates uncertainty if the <i>New Zealand Coastal Policy Statement</i> is revised or amended during the life of the Plan.</p>
Definition – Natural feature			
29 – Department of Conservation	1227	<p>Amend</p> <p>Submitter seeks amendment to the definition of “<i>natural feature</i>” to better reflect Policy 15(c) of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Decline</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Meridian Energy Ltd (20)		Support	<p>The Hearing Panel recommends declining the relief sought by the submitter and note that the definition of “<i>natural feature</i>” encompasses those elements and characteristic identified in Policy 15 of the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel notes that Policy 15 of the <i>New Zealand Coastal Policy Statement</i> includes a list of features, characteristics and values that are components of a natural landscape which are either part of the physical character of the area (such as natural science factors, presence of water, vegetation and presence of wildlife), the perceptions of that character or associations with that area (such as the legibility or expressiveness of those characters, their aesthetic values, memorability and wild or scenic values), and cultural spiritual, historical and heritage associations (such as values of tangata whenua and historic heritage associations).</p>
Further submissions – Port Taranaki Ltd (32)		Support in part	
Further submissions – Powerco (45)		Oppose	
43 – Royal Forest and Bird Protection Society	1228	<p>Amend</p> <p>Amend definition of “<i>natural feature</i>” to include in the definition that protection of natural character of the coastal environment as set out in Policy 15 of the <i>New Zealand Coastal Policy Statement</i>.</p>	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought by the submitter. The Panel does not believe it is necessary to paraphrase the <i>New Zealand Coastal Policy Statement</i> policies in the Plan. The Hearing Panel suggests the definition as proposed reflects most people’s understanding of what is a “<i>natural feature</i>” and to amend the definition to paraphrase those elements set out in Policy 15 of the <i>New Zealand Coastal Policy Statement</i> risks making the Plan overly verbose.</p> <p>Notwithstanding the above, the Hearing Panel notes that elsewhere in the Plan, provisions apply to give effect to Policy 15 of the <i>New Zealand Coastal Policy Statement</i>, e.g. Objective 7 [Natural features and landscapes] and Policy 9 [Natural character and natural features and landscapes]. The Hearing Panel further notes that other objectives and policies contribute to giving effect to Policy 15 of the <i>New Zealand Coastal Policy Statement</i> by identifying and protecting independent values identified as natural features (for example, policies protecting indigenous biodiversity, historic heritage, relationships of tangata whenua with the coastal environment and amenity values).</p> <p>The Hearing Panel further recommends against cross referencing external documents within the definitions as this creates uncertainty if the <i>New Zealand Coastal Policy Statement</i> is revised or amended during the life of the Plan.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Natural landscape			
43 – Royal Forest and Bird Protection Society	1229	Amend	Decline The Hearing Panel recommends declining the relief sought. The Panel does not believe it necessary for the definition to specifically reference Policy 15 of the <i>New Zealand Coastal Policy Statement</i> and risks making the Plan overly verbose, particularly if this approach is adopted for other terms used in the <i>New Zealand Coastal Policy Statement</i> .
		Submitter seeks amendment to the definition of “ <i>natural landscape</i> ” to include in the definition that protection of natural character of the coastal environment is set out in Policy 15 of the <i>New Zealand Coastal Policy Statement</i> .	
Further submissions – Port Taranaki Ltd (32)	Oppose		
Definition – Naturally rare or originally rare			
43 – Royal Forest and Bird Protection Society	1230	Support	Accept
		Retain definition of “ <i>naturally rare or originally rare</i> ” as notified.	Definition of “ <i>naturally rare or originally rare</i> ” is retained as notified.
Definition – Network utility			
12 – Chorus New Zealand Limited	1231	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
13 – Spark New Zealand Trading Limited	1232	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
14 – Vodafone New Zealand Limited	1233	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
	1234	Support	Accept

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
43 – Royal Forest and Bird Protection Society		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
45 – Powerco	1235	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
Further submissions – Transpower NZ Ltd (26)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1236	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
59 – KiwiRail	1237	Support	Accept
		Retain the definition of “ <i>network utility</i> ” as notified.	Definition of “ <i>network utility</i> ” is retained as notified, however, a minor and inconsequential amendment is recommended to include a footnote that references Section 166 of the RMA to assist Plan users.
Definition – Offshore installation or installation			
43 – Royal Forest and Bird Protection Society	1238	Support	Accept
		Retain the definition of “ <i>offshore installation or installation</i> ” as notified.	Definition of “ <i>offshore installation or installation</i> ” is retained as notified.
NEW definition – Operational requirement			
47 – Fonterra	1239	Amend	Grant in kind
		Submitter seeks amendment to the Plan to include a new definition for “operational requirement” to read: <u>Operational requirement means the requirement for a proposal or activity to traverse, locate or operate in a particular environment because of technical or operational characteristics or constraints.</u>	Submitter requests amendment to the Plan to include a definition for “ <i>operational requirement</i> ” as a consequential amendment as a result of amendments requested for Policy 5 [Appropriate use and development of the coastal environment] of the Plan.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Royal Forest and Bird Protection Society (43)		Oppose	The Hearing Panel recommends granting the relief sought by the submitter in kind by including a new definition for “ <i>operational need</i> ”, which is aligned with the <i>National Planning Standards 2019</i> and reads as follows: <u>Operational need means the need for a proposal or activity to traverse, locate or operate in a particular environment because of technical or operational characteristics or constraints.</u>
Further submissions – Powerco (45), Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose in part	
Definition – Outstanding Value			
43 – Royal Forest and Bird Protection Society	1240	Amend	No relief required
		Submitter seeks amendment to the definition of “ <i>Outstanding Value</i> ” to refer to areas identified under Policy 8 of the Plan.	These areas are already identified within the definition of outstanding value with reference to Schedule 1 and 2 of the Plan. Schedules 1 and 2 are the main sources whereby Policy 8 also directs the reader to this location. Therefore, it is not necessary to also refer to Policy 8. The Hearing Panel recommends retaining the current wording of “ <i>outstanding value</i> ” as notified.
Definition – Petroleum			
42 – Ngati Rahiri Hapū	1241	Amend	Accept
		Submitter considers the definition of “ <i>petroleum</i> ” to be rather long-winded and that (a) and (b) could be combined to simply read: [...] any naturally occurring hydrocarbon <u>or naturally occurring mixture of hydrocarbons</u> (other than coal) whether in a gaseous, liquid or solid state.	The Hearing Panel agrees with the submitter and recommends granting the relief sought by amending the definition of “ <i>petroleum</i> ” to read: [...] any naturally occurring hydrocarbon <u>or naturally occurring mixture of hydrocarbons</u> (other than coal) whether in a gaseous, liquid or solid state.
43 – Royal Forest and Bird Protection Society	1242	Support	Accept
		Retain the definition of “ <i>petroleum</i> ” as notified.	Definition of “ <i>petroleum</i> ” is retained subject to minor amendment in response to a relief sought by another submitter (refer submission point 1241).
Definition – Pipeline			
42 – Ngati Rahiri Hapū	1243	Amend	Decline
		Submitter seeks amendment to definition of “ <i>pipeline</i> ” to delete reference to machinery and tanks and read:	The submitter considers the definition of pipeline, as it stands, to be too broad. A pipeline does not mean all machinery, tanks and fittings connected to the pipeline. The submitter will accept that pipelines includes fittings connected to the line.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		[...] a pipeline constructed or used to convey any matter or substance, and includes all machinery, tanks and fittings connected to the pipeline.	<p>however other machinery and tanks should be removed from this definition and, if required, have their own definition.</p> <p>The Hearing Panel considers a “pipeline” to encompass any equipment that aids the pipeline in the normal safe transportation of materials through that pipeline. The Panel notes that there are no instances within the Plan where a pipeline would be considered separate from all equipment that aids in its operation and therefore consider it unnecessary, and potentially confusing for Plan users, to separate them within the definition. Further, this amendment would require additional consequential amendments throughout the Plan, to align the policies and rules to the new definitions, which the Hearing Panel does not believe offers additional value in either the clarity or readability of the Plan.</p> <p>The Hearing Panel recommends retaining the definition of “<i>pipeline</i>” as currently notified.</p>
43 – Royal Forest and Bird Protection Society	1244	Support	Accept
		Retain the definition of “ <i>pipeline</i> ” as notified.	Definition of “ <i>pipeline</i> ” retained as notified.
45 – Powerco	1245	Support	Accept
		Retain the definition of “ <i>pipeline</i> ” as notified.	Definition of “ <i>pipeline</i> ” retained as notified.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1246	Support	Accept
		Retain the definition of “ <i>pipeline</i> ” as notified.	Definition of “ <i>pipeline</i> ” retained as notified.
Definition – Port			
43 – Royal Forest and Bird Protection Society	1247	Amend	Accept
		Submitter seeks amendment of the definition of “ <i>Port</i> ” to state that the port is Port Taranaki OR Alternatively delete the definition.	<p>The submitter contends that the current definition does not make sense given the common meaning of port. The submitter suggests Policy 1 sets out that the “<i>port</i>” is Port Taranaki and states the definition would be clearer if it said it was the Port of Taranaki.</p> <p>The Hearing Panel agrees and recommends amending the definition of “<i>Port</i>” to read:</p>
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Oppose in part	

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Further submissions – Port Taranaki Ltd (32)		Oppose	Port refers to the coastal management area identified in Schedule 1 of the Plan <u>as Port Taranaki</u> .
Definition – Port Air Zone			
43 – Royal Forest and Bird Protection Society	1248	Amend Submitter seeks amendment to the definition of “Port Air Zone” to state that it relates to Port Taranaki.	Accept The Hearing Panel recommend amending the definition of “port air zone” to read: Port air zone <u>relates to Port Taranaki and is identified in</u> refer to Schedule 8 of the Plan.
Definition – Produced water			
42 – Ngati Rahiri Hapū	1249	Amend Submitter seeks amendment to the definition of “produced water” to read: <i>Produced water means water with <u>or without</u> high mineral or salt content associated with the production of oil and gas from reservoirs. It may include water, water that has been injected into the reservoir, and any chemicals added during the production/treatment/enhancement process.</i>	Decline Produced water is a specific by product of the petroleum industry. The characteristics of this by product are well known and anticipated due to the operational methods and associated products used during petroleum production. Produced water is a brine liquid that, due to the operational methods, will contain high mineral and/or salt content. It is therefore not necessary to include the possibility that the water may not contain high mineral or salt content. The Hearing Panel considers this addition unnecessary and broadens the scope of the definition unreasonably. Therefore, the Hearing Panel recommends retaining the definition of “produced water” as currently notified.
43 – Royal Forest and Bird Protection Society	1250	Support Retain the definition of “produced water” as notified.	Accept Definition of “produced water” retained as notified.
Definition – Rare and uncommon ecosystem type			
43 – Royal Forest and Bird Protection Society	1251	Support Retain the definition of “rare and uncommon ecosystem type” as notified.	Accept Definition of “rare and uncommon ecosystems” retained as notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
NEW Definition – Reclamation			
43 – Royal Forest and Bird Protection Society	1252	Amend Submitter seeks amendment to the definition of “reclamation” to read (or similar): <u>The formation of permanent land located above mean high water springs that was formerly below the line of mean high water springs. Reclamation does not include:</u> <u>1. land that has arisen above the line of mean high-water springs as a result of natural processes, including accretion, or</u> <u>2. any infilling where the purpose is to provide beach nourishment, or</u> <u>3. structures such as breakwaters, moles, groynes or sea walls.</u>	Grant in kind The Hearing Panel recommends granting the relief sought by the submitter by amending the Plan to include a definition for “reclamation”, however, recommend aligning with the definition in the <i>National Planning Standards</i> , which reads as follows: <u>Reclamation means the manmade formation of permanent dry land by the positioning of material into or onto any part of a waterbody, bed of a lake or river or the coastal marine area; and</u> <u>(a) includes the construction of any causeway; but</u> <u>(b) excludes the construction of natural hazard protection structures such as seawalls, breakwaters or groynes except where the purpose of those structures is to form dry land.</u>
Further submissions – Port Taranaki Ltd (32)		Oppose	
Definition – Regionally distinctive			
43 – Royal Forest and Bird Protection Society	1253	Support Retain the definition of “regionally distinctive” as notified.	Accept The definition of “regionally distinctive” is retained as notified.
Definition – Regionally important infrastructure			
12 – Chorus New Zealand Limited	1254	Amend Submitter seeks amendment to the definition of “regionally important infrastructure” so that it preferably refers only to “infrastructure” and to read as follows: Regionally important infrastructure means infrastructure of regional and/or national importance and is includes: (a) Port Taranaki and its approaches and on-going development to meet changing operational needs; (b) facilities and arterial pipelines for the supply or distribution of minerals including oil and gas and their derivatives; (c) the national electricity grid, as defined by the Electricity Industry Act 2010;	Accept in part The intent of this definition is to specifically highlight infrastructure that the Council considers to be of added significance to the economic and social wellbeing of Taranaki and New Zealand and which, through policies and rules, should be recognised and provided for. This definition has been intentionally constrained to only include specific infrastructures and exclude others. It is therefore considered inappropriate to broaden the term to encompass all “infrastructure”. Notwithstanding the above, the Hearing Panel recommends granting that part of the relief sought by the submitter to amend (h) and (i) by deleting reference to strategic facilities. The Panel recommends making that part of the change to better align with terminology adopted in relevant legislation relating to those facilities.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(d) facilities for the generation and/or transmission of electricity where it is supplied to the national electricity grid and/or the local electricity distribution network, including supply within the local electricity distribution network;</p> <p>(e) defence facilities;</p> <p>(f) flood protection works;</p> <p>(g) infrastructure associated with the safe and efficient operation of state highways and the rail network;</p> <p>(h) strategic telecommunications facilities, as defined in section 5 of the Telecommunications Act 2001;</p> <p>(i) strategic radiocommunications facilities as defined in section 2(1) of the Radio Communications Act 1989;</p> <p>(j) New Plymouth airport, including flight paths;</p> <p>(k) arterial pipelines and pumping stations for the distribution of potable water and water treatment plants; and</p> <p>(l) arterial pipelines and pumping stations for the collection of wastewater and stormwater, and wastewater treatment plants.</p> <p>OR</p> <p>amend the definition of “regionally important infrastructure” as follows: <i>Regionally important infrastructure means infrastructure of regional and/or national importance and is:</i> [...] (h) strategic telecommunications facilities, as defined in section 5 of the Telecommunications Act 2001; (i) strategic radiocommunications facilities as defined in section 2(1) of the Radio Communications Act 1989 [...]</p>	
13 – Spark New Zealand Trading Limited	1255	<p>Amend</p> <p>Submitter seeks amendment to the definition of “regionally important infrastructure” so that it preferably refers only to “infrastructure” and to read as follows: Regionally important infrastructure means infrastructure of regional and/or national importance and is includes: (a) Port Taranaki and its approaches and on-going development to meet changing operational needs;</p>	<p>Accept in part</p> <p>The intent of this definition is to specifically highlight infrastructure that the Council considers to be of added significance to the economic and social wellbeing of Taranaki and New Zealand and which through policies and rules should be recognised and provided for. This definition has been intentionally constrained to only include specific infrastructures and exclude others. It is therefore considered inappropriate to broaden the term to encompass all “infrastructure”.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<p>(b) facilities and arterial pipelines for the supply or distribution of minerals including oil and gas and their derivatives;</p> <p>(c) the national electricity grid, as defined by the Electricity Industry Act 2010;</p> <p>(d) facilities for the generation and/or transmission of electricity where it is supplied to the national electricity grid and/or the local electricity distribution network, including supply within the local electricity distribution network;</p> <p>(e) defence facilities;</p> <p>(f) flood protection works;</p> <p>(g) infrastructure associated with the safe and efficient operation of state highways and the rail network;</p> <p>(h) strategic telecommunications facilities, as defined in section 5 of the Telecommunications Act 2001;</p> <p>(i) strategic radiocommunications facilities as defined in section 2(1) of the Radio Communications Act 1989;</p> <p>(j) New Plymouth airport, including flight paths;</p> <p>(k) arterial pipelines and pumping stations for the distribution of potable water and water treatment plants; and</p> <p>(l) arterial pipelines and pumping stations for the collection of wastewater and stormwater, and wastewater treatment plants.</p> <p>OR</p> <p>amend the definition of "regionally important infrastructure" as follows:</p> <p><i>Regionally important infrastructure means infrastructure of regional and/or national importance and is:</i></p> <p>[...]</p> <p>(h) strategic telecommunications facilities, as defined in section 5 of the Telecommunications Act 2001;</p> <p>(i) strategic radiocommunications facilities as defined in section 2(1) of the Radio Communications Act 1989 [...]</p>	<p>However, the Hearing Panel recommends granting that part of the relief sought by the submitter to amend (h) and (i) by deleting reference to strategic facilities. The recommended amendments better align with terminology adopted in relevant legislation relating to those facilities.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
23 – New Plymouth District Council	1257	Support	Accept
		Retain (k) and (l) in the definition of “regionally important infrastructure”.	Clauses (k) and (l) in the definition of “regionally important infrastructure” are retained as notified.
26 – Transpower NZ Ltd	1258	Amend	Decline
		Submitter seeks amendment to the definition of “regionally important infrastructure” throughout the Plan to refer to “regionally significant infrastructure” AND That the reference to the National Grid be amended to read: (c) the N ational electricity G grid, <u>being the assets used or owned by Transpower New Zealand Limited as defined by the Electricity Industry Act 2010;</u> AND That a new definition of “National Grid” is added to the Definition Chapter as follows: <u>National Grid means the assets used or owned by Transpower New Zealand Limited.</u>	The Hearing Panel recommends declining the relief sought to amend the Plan to refer to “regionally significant infrastructure” rather than “regionally important infrastructure” in the interests of aligning terminology with other regions (noting that similar terminology has been adopted in other recent second generation plans). The Hearing Panel also recommends no amendments to (c) as the definition should be directly aligned to specific legislation rather than any particular company. This allows the definition to be future proofed in the event that Transpower NZ Ltd is no longer the National Grid provider or the company's name changes. The Hearing Panel notes that reference to the National Grid has not been used within the Plan outside of the definition of “regionally important infrastructure”, and do not believe a definition is necessary.
33 – New Zealand Defence Force	1259	Support	Accept
		Retain the definition of “regionally important infrastructure” as notified, particularly (e) which refers to defence facilities.	Clause (e) of “regionally important infrastructure” is retained as notified.
35 – Radio New Zealand Ltd	1260	Amend	Accept
		Submitter seeks amendment to the definition of “regionally important infrastructure” as follows: <i>Regionally important infrastructure means infrastructure of regional and/or national importance and is:</i> [...] (i) strategic radio communications <u>radiocommunications</u> facilities as defined in section 2(1) of the Radiocommunications Act 1989 [...]	The reason for including “strategic” radiocommunications facilities within the definition for “regionally important infrastructure” is to highlight those essential radiocommunications facilities that provide an essential national or regional service and to differentiate these from less critical facilities. Notwithstanding the above, the Hearing Panel recommends granting the relief sought by the submitter seeking amendments to (i) to delete reference to strategic facilities. The recommended changes better align with terminology adopted in relevant legislation relating to those facilities.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
37 – Petroleum Exploration and Production Association of NZ	1261	Amend	Accept
		Submitter seeks amendment to the definition of "regionally important infrastructure" to read: <i>Regionally important infrastructure means infrastructure of regional and/or national importance and is:</i> [...] (c) facilities and arterial pipelines for the supply, <u>storage</u> or distribution of minerals including oil and gas and their derivatives; [...]	The Hearing Panel recommends amending Clause (c) of the definition of "regionally important infrastructure" to include the storage of minerals including oil and gas and their derivatives as requested by the submitter to read: <i>Regionally important infrastructure means infrastructure of regional and/or national importance and is:</i> [...] (b) facilities and arterial pipelines for the supply, <u>storage</u> or distribution of minerals including oil and gas and their derivatives; [...]
Further submissions – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd (46)		Neutral	
43 – Royal Forest and Bird Protection Society	1262	Support	Accept in part
		Retain the definition of "regionally important infrastructure" as notified.	The definition of "regionally important infrastructure" is retained subject to minor amendments sought by other submitters.
Further submissions – Te Atiawa (58)		Support	At the hearing, the submitter opposed the inclusion of "storage" in the amended definition of "regionally important infrastructure" and sought that the definition return to its notified version. However, the Hearing Panel considers that the definition addressing facilities and arterial pipelines for, amongst other things, the storage of minerals is entirely appropriate.
45 – Powerco	1263	Support	Decline
		Retain the definition of "regionally important infrastructure" as notified but adopt the term "regionally significant infrastructure" (instead of the term "regionally important infrastructure") to ensure consistency between the Plan and other planning documents such as the Regional Policy Statement.	The Hearing Panel recommends declining the relief sought to amend the Plan to refer to "regionally significant infrastructure" rather than "regionally important infrastructure" in the interests of aligning terminology with other regions (noting that similar terminology has been adopted in other recent second generation plans).
Further submissions – Port Taranaki Ltd (32)		Support in part	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1264	Support	Accept
		Retain the definition of "regionally important infrastructure" as notified but adopt the term "regionally significant infrastructure" (instead of the term "regionally important infrastructure") to ensure consistency between the Plan and other planning documents such as the Regional Policy Statement.	The Hearing Panel recommends declining the relief sought to amend the Plan to refer to "regionally significant infrastructure" rather than "regionally important infrastructure" in the interests of aligning terminology with other regions (noting that similar terminology has been adopted in other recent second generation plans).

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
59 – KiwiRail	1265	Support	Accept
		Retain the definition of “ <i>regionally important infrastructure</i> ” as notified.	The definition of “ <i>regionally important infrastructure</i> ” is retained subject to minor amendments sought by other submitters.
Definition – Repair			
43 – Royal Forest and Bird Protection Society	1266	Amend	Accept
		Submitter seeks amendment to the Plan by deleting the definition of “ <i>repair</i> ”: <i>Repair means reconstruction.</i>	The submitter suggests that repair is a key aspect of maintenance and must be included within that definition. The Hearing Panel agrees and recommends granting the relief sought. Repairs are a type of maintenance activity and the standalone definition should be deleted. Consequential amendments are also necessary to the definition of maintenance and associated rules.
45 – Powerco	1267	Amend	Accept
		Submitter seeks amendment to the Plan by deleting the definition of “ <i>repair</i> ”: <i>Repair means reconstruction.</i>	The submitter suggests that repair is a type of maintenance activity and that the standalone definition should be deleted. The Hearing Panel agrees and recommends granting the relief sought. Consequential amendments are also necessary to the definition of maintenance and associated rules.
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1268	Amend	Accept
		Submitter seeks amendment to the Plan by deleting the definition of “ <i>repair</i> ”: <i>Repair means reconstruction.</i>	The submitter suggests that repair is a type of maintenance activity and that the stand-alone definition should be deleted. The Hearing Panel agrees and recommends granting the relief sought. Consequential amendments are also necessary to the definition of maintenance and associated rules.
47 – Fonterra	1269	Support	Decline
		Retain the definition of “repair”.	Several submitters have requested deletion of the definition of “ <i>repair</i> ”. The Hearing Panel recommends deletion of the term.
Further submissions – Port Taranaki Ltd (32)	Support		

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
57 – Heritage New Zealand	1270	Amend Submitter seeks amendment to the Plan by changing the definition of “repair” to read: Repair means reconstruction. <u>Repair (of historic heritage) means the restoration to good or sound condition of any existing structure (or any part of an existing structure) for the purpose of its maintenance.</u>	Accept in part Several submitters have requested deletion of the definition of “repair” to which the Hearing Panel agrees. Repair is proposed to be addressed under an amended definition for “maintenance” which, in part, addresses the suggestion made by the submitter, however, in relation to this Plan, is not limited by its application to historic heritage.
Definition – Reverse sensitivity			
43 – Royal Forest and Bird Protection Society	1271	Support Retain the definition of “reverse sensitivity” as notified.	Grant in kind Support noted. The definition of reverse sensitivity is recommended to be amended in order to provide more clear direction to Plan users. However, the intent and scope of the definition is retained.
Further submissions – Port Taranaki Ltd (32)		Support	
45 – Powerco	1272	Amend Submitter seeks amendment to the definition of “reverse sensitivity” to read: Reverse sensitivity refers to the potential for the operation of an existing effects of sensitive activities on other <u>lawfully established activity</u> yes to be constrained or curtailed by the more recent establishment or intensification of other activities which are sensitive to the proposed activity in their vicinity.	Accept A range of activities may be susceptible to reverse sensitivity effects. As drafted, it could be interpreted that only sensitive activities, for instance residential activities, care facilities, and the like could be affected in this way. This does not recognise that other activities may also be affected. The submitter has suggested amendments to the definition that retain its intent but provides added clarity and minimises potential for misinterpretation. The Hearing Panel agrees that the definition for “reverse sensitivity” is ambiguous and potentially confusing. The Hearing Panel recommends amending the definition to read as follows: Reverse sensitivity refers to the potential for the operation of an existing lawfully established activity <u>to be constrained or curtailed by the more recent establishment or intensification of other activities which are sensitive to the existing activity.</u>
Further submissions – Federated Farmers (2)		Support in part	
Further submissions – Transpower NZ Ltd (26)		Support	
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1273	Amend Submitter seeks amendment to the definition of “reverse sensitivity” to read: Reverse sensitivity refers to the potential for the operation of an existing effects of sensitive activities on other <u>lawfully established activity</u> yes to be constrained or	Accept A range of activities may be susceptible to reverse sensitivity effects. As drafted, the submitter believes that the definition could be interpreted that only sensitive activities, for instance residential activities, care facilities, and the like could be

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
		<u>curtailed by the more recent establishment or intensification of other activities which are sensitive to the proposed activity in their vicinity.</u>	affected in this way. This does not recognise that other activities may also be affected. The submitter has suggested amendments to the definition that retain its intent but provides added clarity and minimises potential for misinterpretation.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Oppose	The Hearing Panel agrees that the definition for “reverse sensitivity” is ambiguous and potentially confusing. The Panel recommends amending the definition to read as follows: <i>Reverse sensitivity refers to <u>the potential for the operation of an existing lawfully established activity to be constrained or curtailed by the more recent establishment or intensification of other activities which are sensitive to the existing activity.</u></i>
Definition – Seascape			
43 – Royal Forest and Bird Protection Society	1274	Support	Accept
		Retain the definition of “seascape” as notified.	Definition of “seascape” is retained as notified.
Definition – Sensitive marine benthic habitats			
43 – Royal Forest and Bird Protection Society	1275	Support	Accept
		Retain the definition of “sensitive marine benthic habitats” as notified.	Definition of “sensitive marine benthic habitats” as notified.
Definition – Sewage			
42 – Ngati Rahiri Hapū	1276	Amend	Grant in kind
		Submitter seeks amendment to the definition of “sewage” to read: <i>Sewage means: drainage and other wastes from any form of toilet, urinal and WC <u>water closet</u> scupper [...]</i>	The Hearing Panel recommends consequential amendments to align with the definition of “sewage” in the <i>National Planning Standards 2019</i> to read as follows: Sewage means <u>human excrement and urine.</u>
43 – Royal Forest and Bird Protection Society	1277	Support	Decline
		Retain the definition of “sewage” as notified.	The Hearing Panel recommends retaining the definition of sewage but notes consequential amendments to align with the definition of “sewage” in the <i>National Planning Standards 2019</i> to read: Sewage means <u>human excrement and urine.</u> The Hearing Panel notes that this amendment does not change the intent of the definition or the intent of its application within the Plan.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Significant indigenous biodiversity			
43 – Royal Forest and Bird Protection Society	1278	Support	Accept
		Retain the definition of “significant indigenous biodiversity” as notified.	Definition of “significant indigenous biodiversity” is retained as notified.
Definition – Silent files			
42 – Ngati Rahiri Hapū	1279	Amend	Decline
		Submitter seeks amendment to the Plan to include a new definition for “silent files” added to describe those sites that iwi/hapū have identified but do not wish to disclose details or even the location of.	The Hearing Panel does not believe that the use of the term “silent files” requires reference in the definitions section. The term is generally understood by the public and does not take on any additional, or contrary meaning within the Plan. The location of its use within the Plan indicates that these files relate to iwi/hapū sites. The Panel does not consider the addition of a definition for “silent files” to be necessary.
Definition – Stormwater			
43 – Royal Forest and Bird Protection Society	1280	Support	Grant in kind
		Retain the definition of “stormwater” as notified.	The Hearing Panel recommends retaining the definition of stormwater but note consequential amendments to align with the definition of “stormwater” in the National Planning Standards 2019 to read: Stormwater means runoff that has been channelled, diverted, intensified or accelerated by human modification of <u>a</u> land surface or runoff from the surface of any structure, as a result of precipitation and includes <u>any</u> contaminants <u>contained within</u> .
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1281	Support	Grant in kind
		Retain the definition of “stormwater” as notified.	The Hearing Panel recommends retaining the definition of stormwater but note consequential amendments to align with the definition of “stormwater” in the National Planning Standards 2019 to read: Stormwater means runoff that has been channelled, diverted, intensified or accelerated by human modification of <u>a</u> land surface or runoff from the surface of any structure, as a result of precipitation and includes <u>any</u> contaminants <u>contained within</u> .

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Structure			
45 – Powerco	1282	Support	Accept
		Retain the definition of “ <i>structure</i> ” as notified.	Definition of “ <i>structure</i> ” is retained as notified.
Definition – Surf break			
43 – Royal Forest and Bird Protection Society	1283	Support	Accept
		Retain the definition of “ <i>surf break</i> ” as notified.	Definition of “ <i>surf break</i> ” is retained as notified.
Definition – Surfable wave			
43 – Royal Forest and Bird Protection Society	1284	Support	Accept
		Retain the definition of “ <i>surfable wave</i> ” as notified.	Definition of “ <i>surfable wave</i> ” is retained as notified.
Definition – Synthetic based drilling muds			
43 – Royal Forest and Bird Protection Society	1285	Support	Accept
		Retain the definition of “ <i>synthetic based drilling muds</i> ” as notified.	Definition of “ <i>synthetic based drilling muds</i> ” is retained as notified.
Definition – Tangata whenua			
42 – Ngati Rahiri Hapū	1286	Amend	Decline
		Submitter seeks amendment to the definition of “ <i>tangata whenua</i> ” to read: <i>Tangata whenua* in relation to a particular area, means the iwi, or hapū, <u>or whanau</u> that holds mana whenua over the area.</i>	<p>The RMA sets out the legislative definition of tangata whenua from which the Plan takes the definition from. The Hearing Panel recommends retaining the current definition of “<i>tangata whenua</i>” as notified to maintain consistency with the RMA as well as other regional and national plans.</p> <p>Notwithstanding the above, the Hearing Panel offer reassurance to the submitter that the definition does not exclude “<i>whanau</i>” but is implicit within the inclusion of hapū which is defined within the Plan and includes whanau. Refer to the amended definition of hapū for more information.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Taonga			
42 – Ngati Rahiri Hapū	1287	Amend	Grant in kind
		Submitter seeks amendment to the definition of “ <i>taonga</i> ” to include iwi, hapū and whanau, or perhaps generically, use the word Māori.	The submitter comments that currently the definition describes prized possessions of the tribe only. The Hearing Panel has investigated the meaning of the word “ <i>taonga</i> ” and recommends simplifying the meaning to broaden it and not to refer to iwi, hapū, whanau or Māori as this is implicit. The revised definition would read as follows: <u><i>Taonga means treasured and/or prized possession(s).</i></u>
Definition – Threatened			
43 – Royal Forest and Bird Protection Society	1288	Support	Accept
		Retain the definition of “ <i>threatened</i> ” as notified.	The definition of “ <i>threatened</i> ” is retained as notified.
Definition – Waihi taonga			
42 – Ngati Rahiri Hapū	1289	Amend	Accept
		Submitter seeks amendment to the Plan to include a new definition for “ <i>wahi taonga</i> ”.	The Hearing Panel recommends granting the relief sought by the submitter by including a definition of “ <i>wahi taonga</i> ” that reads as follows: <u><i>Wahi taonga means a treasured location or place.</i></u>
Definition – Wastewater			
43 – Royal Forest and Bird Protection Society	1290	Support	Accept
		Retain the definition of “ <i>wastewater</i> ” as notified.	The definition of “ <i>wastewater</i> ” is retained as notified.
Definition – Water based drilling muds			
43 – Royal Forest and Bird Protection Society	1291	Support	Accept
		Retain the definition of “ <i>water based drilling muds</i> ” as notified.	The definition of “ <i>water based drilling muds</i> ” is retained as notified.

Submitter	Submission point	Submitter's requests	Hearing Panel's recommendation and response
Definition – Water quality			
43 – Royal Forest and Bird Protection Society	1292	Support	Accept
		Retain the definition of “water quality” as notified.	The definition of “water quality” is retained as notified.
Definition – Well			
32 – Port Taranaki Ltd	1293	Amend	Accept in part
		Submitter seeks amendment to the definition of “well” to include wells and bores for other purposes, including for the purposes of geotechnical investigations AND provide for such investigations through a rule that permits test bores/wells for geotechnical investigative purposes subject to permitted conditions. The proposed definition of “well” would read as follows: Well means a hole drilled for <i>geotechnical investigation or for</i> the purpose of exploring for, appraising or extracting hydrocarbons and includes: <i>(a) any hole for injection purposes;</i> <i>(b) any down-hole pressure containing equipment; and</i> <i>(c) any pressure-containing equipment on top of the well.</i>	The Hearing Panel recommends declining the relief sought in relation to “well” which is deliberately framed to capture drilling for hydrocarbon exploration and production only. However, the Panel does recommend amending the Plan to include a new pathway for drilling for scientific purposes involving a Permitted, Controlled and Restricted Discretionary pathway depending on the activity and the coastal management areas. Rule 52 [Collection of benthic grab samples] (Permitted) has been amended to broaden the gateway and additional Controlled and Restrictive Discretionary rules follow as new Rules 52A and 52B.
43 – Royal Forest and Bird Protection Society	1294	Support	Accept
		Retain the definition of “well” as notified.	The definition of “well” is retained as notified.
Definition – Wetland			
43 – Royal Forest and Bird Protection Society	1295	Support	Accept
		Retain the definition of “wetland” as notified.	The definition of “wetland” is retained as notified.

4.9 Schedules and appendices

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Schedule 1 – Coastal management areas			
28 – Grant Knuckey	1296	Amend Submitter seeks amendment to Schedule 1 of the Plan to identify two new marine spatial management areas – Wahi Tapu Areas and Wahi Taonga Areas.	Grant in kind The Hearing Panel does not consider it appropriate to include wāhi tapu and wāhi taonga as independent coastal management areas within Schedule 1.
Further submissions – Te Korowai o Ngāruahine Trust (41)		Support	<p>The Hearing Panel has noted requests for amendments to the Plan to include reference to both wāhi tapu and wāhi taonga sites and have agreed to many of these requests provided it is within the correct context. Of note, Schedule 5B identifies sites of significance to Māori (and associated values) and should include wāhi tapu and wāhi taonga areas as identified by iwi or hapū. The Panel are aware that this is not explicitly stated in Schedule 5B so recommend amending the introduction of Schedule 5B to read:</p> <p><i>Schedule 5B - Sites of significance to Māori and associated values</i></p> <p><i>This schedule identifies known sites with special cultural, spiritual, historical and traditional associations located within the coastal marine area. The Taranaki Regional Council is committed to working with iwi o Taranaki to identify all culturally significant sites that are located within the coastal marine area. Site locations area approximate only and are not intended to provide a definitive location or extent of a site. <u>These include those sites that are identified as wāhi tapu and wāhi taonga by the iwi and hapū.</u> [...]</i></p> <p>In addition, the Hearing Panel recommends amending Schedule 5B to identify additional wāhi tapu and wāhi taonga sites identified through pre-hearing engagement by iwi and hapū.</p>
43 – Royal Forest and Bird Protection Society	1297	Amend Submitter seeks amendment to Schedule 1 of the Plan by identifying significant indigenous biodiversity areas and add them as individual map links for each site, under the corresponding management area. Include information that sets out the values and characteristics that contribute to the significance of each area.	Grant in kind The Hearing Panel notes that, although the Council does maintain information relating to significant indigenous biodiversity areas, there is a lack of comprehensive information relating to <u>all</u> significant indigenous biodiversity within the coastal marine area and that some information that exists may be better suited to sit outside of the Plan.
Further submissions – Department of Conservation (29)		Support	<p>In relation to identifying 'significant indigenous biodiversity', the Hearing Panel believes that the planning maps already largely identifies known sites of interest in</p>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<p>the coastal marine area (noting that the identification of terrestrial sites in the coastal environment are considered the responsibility of the district councils). In particular, the Plan and associated planning maps identify for the coastal marine area the following areas with known significant indigenous biodiversity values:</p> <ul style="list-style-type: none"> • Outstanding Value coastal management areas – Whitecliffs, Mimi Estuary, Paritutu, Ngā Motu (Sugar Loaf Islands), Tapuae, Hangatahua River, Oaonui (Sandy Bay), Kaupokonui, Kapuni, Whenuakura, Waipipi Dunes, Project Reef, North and South Traps, Waverley Beach, and Waitotara • Estuaries Unmodified coastal management areas – Urenui, Onaero, Waiongana, Oākura, Waingongoro, Tangahoe, and Manawapou estuaries • Estuaries Modified coastal management areas – Patea, Waiwhakaiho, and Waitara estuaries • Parinihihi Marine Reserve • Ngā Motu/Sugar Loaf Islands Marine Protected Area • Tapuae Marine Reserve • All inshore reefs. <p>Notwithstanding the above, the Hearing Panel further recommends amending the planning maps to better identify the aforementioned areas as significant indigenous biodiversity areas. The Panel further recommends amending the Plan and associated planning maps to identify additional spatial information relating to significant indigenous biodiversity in the coastal marine area, these being the marine mammal sanctuary and also the significant sea bird areas.</p>
43 – Royal Forest and Bird Protection Society	1298	Amend	Accept
		Submitter seeks amendment to Schedule 1 of the Plan by replacing the numbering (e.g. 1 to 5) so that each coastal management area is identified as (a) to (e) in a manner consistent with Policy 1 (a) to (e).	The Hearing Panel recommends amending the numbering system of coastal management areas in Schedule 1 to reflect the same style used in Policy 1.
47 – Fonterra	1299	Support	Accept
		Retain the classification of the coastal management area in the vicinity of Whareroa as Open Coast.	The classification of the coastal management area in the vicinity of Whareroa is retained as an Open Coast coastal management area as currently notified.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Schedules 1 and 2 – Coastal management areas and areas of outstanding value			
21 – Climate Justice Taranaki	1300	<p>Amend</p> <p>Submitter seeks amendment to Schedules 1 and 2 of the Plan to include and identify as coastal management areas of Outstanding Value based on the recommendation of Cawthron from the report <i>Sensitive habitats and threatened species in the Taranaki Coastal Marine Area (TCMA)</i>:</p> <ul style="list-style-type: none"> • Patea Shoals • Rolling Ground. <p>The submitter requests that the Council investigate the value of Graham Bank as this has potential to be an outstanding area.</p>	<p>Decline</p> <p>The Hearing Panel recognises the recommendation of the report to <u>consider</u> Patea Shoals and that the Council report by Cawthron (2016) described the Patea Shoals and Rolling Ground as "worth considering". However, it is the opinion of Hearing Panel that, at this point in time, there is insufficient information to confirm that 'outstanding' criteria have been met.</p> <p>With regards to the Graham Bank, as the submitter has recognised, there is insufficient information to determine whether this is an area of Outstanding Value. At present it is not within the scope of the Council to conduct an investigation into this location in time to determine its value prior to this Plan becoming fully operative.</p>
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose in part	
45 – Powerco	1301	<p>Amend</p> <p>Submitter seeks amendment to Schedules 1 and 2 of the Plan by:</p> <ul style="list-style-type: none"> • mapping the coastal environment line • ensuring that the extent of sensitive coastal management areas (outstanding areas, modified and unmodified estuaries) are appropriate having particular regard to existing infrastructure, including roads and overhead electricity lines • amending the corresponding descriptions of the coastal management areas throughout the Plan to recognise existing infrastructure in these sensitive areas to ensure it can be operated, maintained, and upgraded as appropriate. 	<p>Accept in part</p> <p>A number of submitters have requested to have the coastal environment defined by a line that recognises its extent.</p> <p>The Hearing Panel recommends granting the relief sought by referencing an 'indicative coastal environment line in the planning maps and identifying the coastal environment on associated planning maps that are aligned with the coastal environment line identified in a district plan or proposed district plan (or their equivalent).</p> <p>The indicative nature of this line is to recognise that the coastal environment is a dynamic environment where process of can occur rapidly and induce change to the nature and character of the area and as such the coastal environment line may become redundant or inaccurate in the future due to these changes. The indicative line is useful for identifying whether a particular activity is likely to fall within the coastal environment, however, proper assessment of the location with regards to coastal features and processes may still be necessary from time to time to consider the nature of that location, including the relative significance of any coastal features and characteristics (such matters to be considered on a case-by-case basis through the consenting process).</p> <p>With regards to existing infrastructure, the location of infrastructure has been considered, however, the values associated with these locations are considered to</p>
Further submissions – Transpower NZ Ltd (26)		Support in part	
Further submissions – Fonterra (47)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<p>be high enough to afford the protections provided for within the Plan despite any infrastructure that may exist in their vicinity. Further, the Hearing Panel considers it unnecessary and inappropriate to retrospectively amend the extent of any sensitive management areas or their descriptions to simply provide for existing infrastructure.</p> <p>The Hearing Panel further note that areas of Outstanding Value are consistent with the extents of outstanding natural feature and landscapes identified by the New Plymouth District Council in the Draft District Plan and South Taranaki District Council. The Hearing Panel recommends that the Council seek, as far as is practicable, alignment and consistency with other plans within the region.</p>
46 – Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd	1302	<p>Amend</p> <p>Submitter seeks amendment to Schedules 1 and 2 of the Plan by:</p> <ul style="list-style-type: none"> • mapping the coastal environment line • ensuring that the extent of sensitive coastal management areas are appropriate having particular regard to existing infrastructure, particularly the landward edge of Nga Motu and Tapuae areas of outstanding value • amending the corresponding descriptions of the coastal management areas throughout the Plan to recognise existing infrastructure in these sensitive areas to ensure it can be operated, maintained, and upgraded as appropriate. 	<p>Accept in part</p> <p>A number of submitters have requested that the coastal environment be defined by a line that recognises its extent.</p> <p>The Hearing Panel recommends granting this relief subject to it being identified as the “indicative coastal environment line”. The indicative nature of this line is to recognise that the coastal environment is a dynamic environment where process of can occur rapidly and induce change to the nature and character of the area and as such the coastal environment line may become redundant or inaccurate in the future due to these changes. The line that is also aligned with the coastal environment line identified in a district plan or proposed district plan (or their equivalent) would be useful for identifying whether a particular activity is likely to fall within the coastal environment. However, proper assessment of the location with regards to coastal features and processes may be necessary from time to time to determine with complete assurance the coastal nature and characteristics of that location.</p> <p>The extents of Nga Motu and Tapuae are considered appropriate having specific regard to the natural character of the location.</p> <p>The Hearing Panel notes that infrastructure has been recognised but is not considered in the assessment contributing to outstanding values. Instead, the areas are evaluated based upon the natural character attributes present and despite any existing infrastructure. Further, the Hearing Panel considers it inappropriate to amend the extents of any sensitive management areas or their descriptions to reflect existing infrastructure as this would defeat the purpose of the management areas.</p>
Further submissions – Royal Forest and Bird Protection Society (43)		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<p>The Hearing Panel further note that areas of Outstanding Value are consistent with the extents of outstanding natural feature and landscapes identified by the New Plymouth District Council in the Draft District Plan and South Taranaki District Council. The Hearing Panel seeks, as far as is practicable, alignment and consistency with other Plans within the region.</p> <p>The Hearing Panel maintains that the descriptions of coastal management areas are appropriate and that the recognition of existing infrastructure is not necessary.</p>
61 – Te Rūnanga o Ngāti Ruanui Trust	1303	<p>Amend</p> <p>Submitter seeks amendment to Schedules 1 and 2 of the Plan (and associated planning maps) to include and identify as coastal management areas Estuaries Unmodified:</p> <ul style="list-style-type: none"> • Huroto Stream • Waihi Stream • Katewheta Stream • Waikaikai Stream • Mangaroa Stream • Kaikura Stream • Whenuakura River • Manawapou River. 	<p>Accept in part</p> <p>The Council has assessed the requested locations and have determined that the majority of these streams (Huroto Stream, Waihi Stream, Katewheta Stream, Waikaikai Stream, Mangaroa Stream and Kaikura Stream), although they exist in generally unmodified environments, do not meet the requirement of scale (need to be large) and being permanently open to tidal movements.</p> <p>The Hearing Panel notes that the flow of coastal water upstream of the river mouth depends upon tidal movements and there will be a salinity gradient decreasing upstream from the mouth of the river. The predominance of coastal processes is essential for river mouths to be recognised as estuaries (and thereby covered in the Coastal Plan rather than Freshwater Plan). Without these characteristics these locations cannot be considered estuaries irrespective of the low amounts of development.</p> <p>Notwithstanding the above, the Hearing Panel notes that the Whenuakura River has been identified as an area of outstanding value and as a site of significance to Māori providing significant protections for this location. Further, the Manawapou River has also been identified as an unmodified estuary as requested by the submitter.</p>
Schedule 2 – Coastal areas of outstanding value			
6 – Trans-Tasman Resources Ltd	1304	<p>Amend</p> <p>Submitter seeks amendment to Schedule 2 of the Plan to delete inclusion of the Project Reef (ONC6) as an area of outstanding value, including:</p> <ul style="list-style-type: none"> • the reference to ONC6 and Map-link Map 42 on page 121; • the entire ONC6 Project Reef material on page 129; and • Map Link Map 42. 	<p>Decline</p> <p>The Hearing Panel recommends declining the relief sought.</p> <p>The ONC 6 area was assessed under the outstanding natural character criteria and found to exhibit a very high degree of natural character in all assessment areas which include abiotic attributes (two large adjoining pinnacle reefs which are unusual features on a shelf region dominated by sand), biotic attributes (important</p>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Further submissions – Karen Pratt (9), South Taranaki Underwater Club (10), Department of Conservation (29), Te Rūnanga o Ngāti Mutunga (40), Royal Forest and Bird Protection Society (43), Nga Motu Marine Reserve Society Inc (44), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Oppose	kelp beds, a diverse range of fish and encrusting sponge species, and provides a valuable habitat for crayfish) and perceptual and experiential attributes (minimum human activity and the location experience maintains a high sense of wilderness and remoteness). “Very high” is the highest rating on a 7 point grading system and illustrates unequivocally that this as an area of outstanding natural character as currently determined. These individual assessment criteria contribute to the overall rating for the area as being “outstanding”. Further, the Hearing Panel notes strong support for this inclusion from other submitters confirming these values. The Panel recommends maintaining ONC 6 as an area of outstanding natural character.
9 – Karen Pratt	1305	Support	Accept
		Support inclusion of the Project Reef (ONC6) as an area of outstanding value.	Support noted.
Further submissions – Nga Motu Marine Reserve Society Inc (44), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
10 – South Taranaki Underwater Club	1306	Support	Accept
		Support inclusion of the Project Reef (ONC6) as an area of outstanding value.	Support noted.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Nga Motu Marine Reserve Society Inc (44), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	
11 – Bruce Boyd	1307	Support	Accept
		Support inclusion of the Project Reef (ONC6) as an area of outstanding value.	Support noted.
Further submissions – Nga Motu Marine Reserve Society Inc (44), Te Rūnanga o Ngāti Ruanui Trust (61)		Support	

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
17 – David Pearce	1308	Amend Submitter seeks amendment to boundaries of ONC 8 and ONFL 9 [Waitotara] as an area of outstanding value to exclude modified landscape and to align with South Taranaki's Proposed District Plan.	Accept The Hearing Panel recommends aligning the extent of ONC 8 and ONFL 9 with South Taranaki District Council's Proposed District Plan recognising that the area to be excluded consists of highly modified scrub and farmland.
Further submissions – Royal Forest and Bird Protection Society (43)		Oppose	
19 – South Taranaki District Council	1309	Support Notes support for aligning areas of outstanding value with South Taranaki's Proposed District Plan.	Accept Support noted.
21 – Climate Justice Taranaki	1310	Amend Submitter seeks amendment to boundaries of ONC 8 and ONFL9 [Waitotara] as an area of outstanding value to align with South Taranaki's Proposed District Plan.	Accept The Hearing Panel recommends granting the relief sought by the submitter by aligning the extent of ONC 8 and ONFL 9 with South Taranaki District Council's Proposed District Plan – recognising that the area to be excluded consists of highly modified scrub and farmland.
Further submissions – Trans-Tasman Resources Ltd (6)		Neutral in part	
23 – New Plymouth District Council	1311	Support Submitter supports Schedule 2 as notified.	Accept Support noted.
Further submissions – Port Taranaki Ltd (32)		Support	
26 – Transpower NZ Ltd	1312	Amend Submitter seeks amendment to Schedule 2 of the Plan and associated planning maps so that the Indicative coastal marine area boundary line on Map 44 is retained, but the Outstanding Value area landward of the Indicative coastal marine area boundary line is moved to align with the Indicative coastal marine area boundary line.	Decline The Hearing Panel recommends declining the relief sought. The coastal marine area line does not delineate the maximum extent of the Coastal Plan. The Coastal Plan covers both the coastal marine area and the coastal environment, landward of the indicative coastal marine area boundary line. As such, through analysis of the values and characteristics associated with the outstanding value area (ONC3 and ONFL2), The Hearing Panel recommends that the Plan retains the extent of the outstanding value areas to show the landward component recognising that these values are not only associated with features within the coastal marine area.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			The Hearing Panel further notes that both the Council and the New Plymouth District Council have identified the landward extent of the ONC3 location to extend onto the coastal environment and that councils that operate across the same regional area should maintain consistency between planning maps where possible and practical.
30 – First Gas Ltd	1313	Other Submitter seeks confirmation that the First Gas Pipeline at the Waitotara River is outside the area of outstanding value as identified on planning maps 38-39. If the existing pipeline corridor is in the area of outstanding value amend Schedule 2 and associated maps to exclude the corridor.	No relief necessary The Hearing Panel confirms that the First Gas Pipeline at the Waitotara River is outside the area of outstanding value as identified on planning maps 38-39 (based upon the datasets provided).
Further submissions – Royal Forest and Bird Protection Society (43)		Oppose in part	
44 – Nga Motu Marine Reserve Society Inc	1314	Support Submitter supports the inclusion of eight coastal areas of outstanding value and the nine outstanding natural features or landscapes and, in particular, the inclusion of ONC 6 [Project Reef] and ONC 7 [North and South Traps].	Accept Support noted.
52 – Emily Bailey	1315	Amend Submitter believes that the following locations possess great cultural, ecological, economic and recreational importance and require special protection from development, dredging and uncontrolled recreational disturbance. Submitter seeks amendment to Schedule 2 of the Plan to include the following as areas of outstanding value: <ul style="list-style-type: none"> • Waipapa, Otaraūa Road, Waitara • the Waitara Reefs, and • the reefs, tauranga kia/waka and urupā in the following 8 fishing reserves along the coast of Taranaki: Tui Raho (Tuhiraroa), Te Whanganui, Ihutangi, Okawa, Te Ikaroa, Tipoka 55a and 55b, Mataurukuhia, and Te Wairua (Wairoa) (on Waitaha River). 	Decline For a location/site to be classified under the Outstanding Value Coastal Management Area it must be exceptional and meet a strict set of criteria. For this category, locations are required to exhibit very high natural character attributes with regards to abiotic features (natural features), biotic features (distribution, expression/appearance and diversity of species, natural processes and habitats) and perceptual and experiential values. In addition to these qualifiers, locations that have experienced human modification generally cannot be considered to be outstanding due to the modification elements which detract from the natural features, even if such modifications are not obvious to the viewer. The Hearing Panel does not believe the identified sites meet the outstanding (exceptional) thresholds adopted for the other areas identified as being outstanding natural character and/or outstanding natural features and landscapes. Notwithstanding the above, the Hearing Panel notes that these sites have been included within other Schedules of the Plan because of their 'significant' values, which, in turn means protections through relevant policies and rules will apply. The

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Forest and Bird Protection Society (43)			<p>Plan already recognises the cultural and historic heritage values of these sites (and as identified in the submitter's commentary) as follows:</p> <ul style="list-style-type: none"> • Waipapa, Otaraūa Road, Waitara is identified as a site of significance to Māori due to its Māori heritage values. The Schedule numbers are C68 and C67 under Schedule 5B • the Waitara kaawa/reefs have been identified as near shore reefs but do not possess sufficient qualities to be considered under the outstanding value management criteria. • with the eight fishing reserves identified, all of these are recorded as being sites of significance to Māori due to their cultural and historic heritage values but do not possess sufficient qualities to be considered under the outstanding value management criteria. <p>The Hearing Panel agrees with the submitter that the locations identified by the submitter contain specific values and require special protection, however, consider that the appropriate protections have already been provided within the Plan as notified and recommends declining the relief requested.</p>
53 – Taranaki Regional Council	1316	Amend Submitter seeks amendment to Schedule 2 of the Plan to align the mapping of Outstanding Natural Character Areas with those mapped by the South Taranaki District Council through their district plan review.	Accept Mapping of Outstanding Natural Character Areas have been done to align the mapped extents to those mapped by the South Taranaki District Council with the exception of Waitotara (ONC8). The Hearing Panel recommend aligning the extent of this site to match the extents of Outstanding Natural Character sites identified by the South Taranaki District Council.

		<ul style="list-style-type: none"> Waihi Beach. 	<p>outstanding due to the modification elements which detract from the natural features, even if such modifications are not obvious to the viewer.</p> <p>The Hearing Panel does not believe the identified sites meet the outstanding (exceptional) thresholds adopted for the other areas identified as being outstanding natural character and/or outstanding natural features and landscapes. However, the Hearing Panel believes that these sites could be included within other Schedules because of their 'significant' values. Schedule 5B of the Plan already recognises sites of significance to Māori and Hearing Panel consider that some of these sites maybe better identified in that Schedule. Also of note, the Patea beach lies within the Estuary Modified coastal management area and, as such, has a higher level of regulatory protection.</p> <p>In pre-hearing engagement, the submitter met with Council officers to confirm and identify sites of significance in their rohe and in or adjacent to the coastal marine area to be included in Schedule 5B. The Hearing Panel refers the submitter to submission point 1345 for further information.</p>
Further submissions – Climate Justice Taranaki Inc (21), Royal Forest and Bird Protection Society (43)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	1318	Support Submitter supports the identification and inclusion of the Whenuakura River Estuary in Schedules 1 and 2 of the Plan as an area of outstanding value.	Accept Support for inclusion of Whenuakura River Estuary is noted.
Schedule 2 – Coastal areas of outstanding value / Schedule 9 – Documents incorporated by reference			
43 – Royal Forest and Bird Protection Society	1319	Amend Submitter seeks amendment to Schedule 2 of the Plan to incorporate by reference (Schedule 9) the report <i>Regional landscape study of the Taranaki coastal environment</i> (2015).	Decline Part 3 [Incorporation of documents by reference in plans and proposed plans] of Schedule 1 of the RMA states that documents that are standards, requirements or recommended practices of international or national organisations; standards, requirements or recommended practices prescribed in any country or jurisdiction; and any other written material that deals with technical matters and is too large or impractical to include in, or print as part of the plan or proposed plan can be incorporated by reference. These documents will have legal effect as part of the plan or proposed plan. The Hearing Panel does not believe the document requested fits any of the required criteria to be considered an appropriate document to incorporate by reference and has only been referenced in Schedule 2 in order to provide additional background information for the reader's information.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Schedule 2 – Coastal areas of outstanding value			
43 – Royal Forest and Bird Protection Society	1320	<p>Amend</p> <p>Submitter seeks amendment to Schedule 2 of the Plan (or include a new Schedule) and associated planning maps to identify areas of high natural character” and include the values and characteristics of identified areas.</p>	<p>Grant in kind</p> <p>The Hearing Panel notes that, although the Council does maintain information relating to natural character, other parties such as territorial authorities are better placed to address (and map) the terrestrial parts of the coastal environment.</p> <p>In relation to identifying and mapping ‘high natural character’, the Hearing Panel believes that a number of planning instruments currently do this.</p> <p>In relation to the landward parts of the coastal environment, it is not considered appropriate or necessary to pre-empt and/or duplicate district planning processes identifying high natural character and features (noting that the identification of terrestrial sites in the coastal environment are considered the responsibility of the district councils).</p> <p>In relation to the seaward parts of the coastal environment, the Hearing Panel notes that the <i>Regional Policy Statement for Taranaki</i> plus the Proposed Coastal Plan and associated planning maps already largely identify ‘high natural character’ areas. For example, Appendix II of the <i>Regional Policy Statement for Taranaki</i> already identifies high quality or high value areas of the Taranaki coastal environment. The Coastal Plan review process further investigated this issue. In relation to the coastal marine area, the Council has undertaken a precautionary approach in its assessment of natural character ‘by generally identifying areas with ‘high natural character’ as ‘outstanding’. Coastal areas of outstanding value cover a combined area of approximately 67.2 km (or 22.5%) of the Taranaki coastline.</p> <p>The Hearing Panel recommends granting the submitter relief in kind by amending the relevant planning maps to identify those areas already identified in the Plan as having high (or higher) natural character in the coastal marine area - these being outstanding areas and estuaries unmodified, i.e:</p> <ul style="list-style-type: none"> • Whitecliffs • Mimi Estuary • Paritutu • Ngā Motu (Sugar Loaf Islands) • Tapuae • Hangatahua River • Oaonui (Sandy Bay)

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<ul style="list-style-type: none"> • Kaupokonui • Kapuni • Whenuakura • Waipipi Dunes • Project Reef • North and South Traps • Waverley Beach • Waitotara • Urenui estuary • Onaero estuary • Waiongana estuary • Oākura estuary • Waingongoro estuary • Tangahoe estuary • Manawapou estuary. <p>In addition to the above, the Hearing Panel further recommends Council amending the planning maps to identify any additional areas identified in Appendix II of the <i>Regional Policy Statement for Taranaki</i> as having high natural character.</p>
Schedule 4 – Significant indigenous biodiversity			
43 – Royal Forest and Bird Protection Society	1321	Amend Submitter seeks amendment to Schedule 4 [Significant indigenous biodiversity] of the Plan to identify areas of significant indigenous biodiversity in the coastal marine area, including the values and characteristics that contribute to the significance of each area. Areas identified are to include the 'significant coastal areas' identified in the New Plymouth District Plan and the relevant Important Bird Areas for New Zealand Seabirds as show in Appendix 3 to this submission).	Accept in part As noted in the Section 32 Evaluation Report, the Council does not believe any organisation has the required datasets to accurately map all aspects of significant indigenous biodiversity with any certainty. Agencies with monitoring roles for biodiversity include the Department of Conservation, regional councils, district councils, Ministry for Primary Industries, Environmental Protection Authority, and Maritime New Zealand. However, data and knowledge gaps make biodiversity mapping especially challenging. There is no accurate national or regional dataset. One of the challenges for accurately mapping biodiversity is accessing data of sufficient quality and breadth to be confident that all aspects of biodiversity can be adequately mapped. The Hearing Panel is concerned that Taranaki, as with the rest of New Zealand, has incomplete

Further submissions – Climate Justice Taranaki Inc (21)		Support	<p>information and that mapping sites based upon information we currently have (such as SNAs, KNEs) would have a perverse outcome in that it provides less protection for those aspects of biodiversity that were not mapped. The situation is even worst when it comes to species information and/or the marine environment.</p> <p>The Council's preferred approach is to clearly identify those aspects of biodiversity in the coastal marine area (through Policy 14) that require a higher level of protection by avoiding the adverse effects of activities. Those areas of significant indigenous biodiversity on the landward parts of the coastal environment line are being identified separately by South Taranaki and New Plymouth district councils. The Hearing Panel believes the current protections give effect to Policy 11 [Indigenous biological diversity (biodiversity)] of the <i>New Zealand Coastal Policy Statement</i>.</p> <p>The Hearing Panel notes that the planning maps already include considerable information of interest. In particular, the Plan and associated planning maps identify for the coastal marine area the following areas with known significant indigenous biodiversity values</p> <ul style="list-style-type: none"> • Outstanding Value coastal management areas – Whitecliffs, Mimi Estuary, Paritutu, Ngā Motu (Sugar Loaf Islands) Tapuae, Hangatahau River, Oaonui (Sandy Bay), Kaupokonui/Kapuni, Whenuakura, Waipipi Dunes, Project Reef, North and South Traps, Waverley Beach, and Waitotara • Estuaries Unmodified coastal management areas – Urenui, Onaero, Waiongana, Oākura, Waingongoro, Tangahoe and Manawapou estuaries • Estuaries Modified coastal management areas – Patea, Waiwhakaiho and Waitara estuaries • Parininihi Marine Reserve • Ngā Motu/Sugar Loaf Islands Marine Protected Area • Tapuae Marine Reserve • All inshore reefs. <p>Notwithstanding the above, the Hearing Panel has reviewed spatial information to ascertain whether any additional biodiversity mapping overlays can be provided. As a result it is recommended that the Important Bird Areas for New Zealand that occur within the Taranaki region be included as a planning layer alongside the marine mammal sanctuary and that appropriate policy linkages be made as a</p>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			consequential amendment. At the hearing, the submitter requested a definition for "significant marine animal and seabird areas". The Hearing Panel notes that the term covers two distinct spatial areas in the Taranaki coastal marine area, the North Island West Coast Marine Mammal Sanctuary and the Important Bird Areas for New Zealand which will be identified and labelled on the planning maps. The Hearing Panel does not consider that a definition is necessary or useful.
Schedule 4A – Significant species and ecosystems			
6 – Trans-Tasman Resources Ltd	1322	Amend Submitter seeks that Schedule 4A is deleted in its entirety or amended to remove any non-threatened species and any at risk species other than those which are listed as at risk (declining) under the New Zealand Threat Classification System.	Decline The submitter considers it inappropriate to include a list of significant species and ecosystems based on the threat classification status given the classification status are reviewed every three years whereas the Coastal Plan is expected to have a ten year life. If the schedule is to remain, the submitter considers that it should be amended to remove reference to non-threatened flora and fauna, and at risk species unless they are declining. Policy 11 [indigenous biological diversity] of the <i>New Zealand Coastal Policy Statement</i> sets out the requirements for protection of indigenous species. These protections are not limited to species that are considered threatened and the Hearing Panel notes that there is much more scope within the Policy to identify other species of importance. The Hearing Panel notes that the Policy provision for threatened species (Policy 14 [Indigenous biodiversity] (a)(i) and (ii)) have been framed to "include" those species listed in Schedule 4A, therefore, the policy references the schedule but does not depend upon the schedule, allowing flexibility with any changes that may occur during the life of the Plan. The Hearing Panel considers that the inclusion of Schedule 4A will further ensure that the appropriate measures are taken with regards to threatened species and removal of the schedule will reduce the effectiveness of the protections provided through the policies. Further, the inclusion of regionally significant species is consistent with the <i>Regional Policy Statement</i> that significant indigenous biodiversity includes the distinctive criterion whereby added protection is provided to species that are important in the local context. Therefore, the Hearing Panel recommends retaining Schedule 4A [Significant species and ecosystems] noting that minor amendments are recommended to grant relief to other submitters requests.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
29 – Department of Conservation	1323	Amend Submitter seeks amendment to Schedule 4A of the Plan to include maps of areas, ecosystems, and habitats that have significant indigenous biodiversity values.	Decline Agencies with monitoring roles for biodiversity may include the Department of Conservation, regional councils, district councils, Ministry for Primary Industries, Environmental Protection Authority, and Maritime New Zealand. The Hearing Panel does not believe any of these agencies are in a position to supply a complete and accurate record of significant indigenous biodiversity in Taranaki. It is Hearing Panel's view that data and knowledge gaps make biodiversity mapping especially challenging. There is no accurate national or regional dataset. One of the challenges for accurately mapping biodiversity is accessing data of sufficient quality and breadth to be confident that all aspects of biodiversity can be adequately mapped. The Panel is concerned that Taranaki, as with the rest of New Zealand, has incomplete information and that mapping sites based upon information we currently have (such as SNAs, KNEs) would have a perverse outcome in that it provides less protection for those aspects of biodiversity that were not mapped. The situation is even worse when it comes to species information.

43 – Royal Forest and Bird Protection Society	1324	Amend Submitter seeks amendment to Schedule 4A of the Plan by identifying and mapping the locations where rare and uncommon ecosystem types identified in the schedule occur.	Decline The Hearing Panel recommends declining the relief sought. Mapping of rare and uncommon ecosystems has not been undertaken due to insufficient information regarding the locations and extents of where these occur. The Hearing Panel notes that many of these locations occur landward of the coastal marine area making the majority of these locations redundant to the purposes of this Plan. Further many of these locations will be very small scale and may be difficult to include within the planning maps. Agencies with monitoring responsibilities for biodiversity may include the Department of Conservation, regional councils, district councils, Ministry for Primary Industries, Environmental Protection Authority, and Maritime New Zealand and the Council considers it unreasonable to expect this agency to conduct such a detailed, fine scale and sensitive analysis out of all other relevant agencies. The Hearing Panel is concerned that the inclusion of incomplete mapping is likely to produce a perverse outcome in that it provides less protection for those rare and uncommon ecosystem types that were not mapped. It may be possible to include this information in future plans (or spatial mapping) once the necessary monitoring, data collection and analysis has been conducted.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
43 – Royal Forest and Bird Protection Society	1325	Amend Submitter seeks amendment to Schedule 4A of the Plan by adding to the schedule: non-vascular plant species, including coastal lichens; data deficient marine species; and missing regionally distinctive species including the common dolphin.	Accept in part Non vascular plants are not consistently recorded during site surveys in Taranaki therefore there is insufficient information to adequately identify which threatened, at risk or data deficient species may be present in the region. The Department of Conservation also do not hold this type of distributional data and the Hearing Panel is concerned that the identification and incorporation of incomplete information at this scale would be detrimental to the integrity of the Plan.
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose in part	
Further submissions Te Rūnanga o Ngāti Ruanui Trust (61)		Support	Notwithstanding the above, the Hearing Panel has reviewed the Schedule to ensure it provides the most up-to-date information. In response to the submitter's request, the Council sought advice from the Department of Conservation in relation to candidate marine species that warrant being identified as 'regionally distinctive'. Subsequently amendments have been made to Schedule 4A, including reviewing those species identified as data deficient under the NZ Threat Classification and the Hearing Panel recommends amending Schedule 4A to identify additional marine algae, sharks and mammal species as regionally distinctive as well as amending the threat classifications, where necessary, to contain the most up to date information.
55 – Kiwis Against Seabed Mining	1326	Amend Submitter seeks amendment to Schedule 4A of the Plan by mapping to identify all significant areas, including the spatial extent of intrinsic relationship and biodiversity, to provide for the maintenance and enhancement of biodiversity in the wider coastal marine area.	Accept in part Mapping biodiversity values within the coastal marine area is a particularly difficult tasks primarily due to insufficient data sets. Further, there is a risk in providing incomplete information in plans such as this as it may produce a perverse outcome for those areas that have not been mapped or do not possess sufficient information to accurately determine the spatial values. Notwithstanding the above, the Council has reviewed spatial information to ascertain whether any additional biodiversity mapping overlays can be provided. As a result the Hearing Panel recommendeds that the Important Bird Areas for New Zealand that occur within the Taranaki region be included as a planning layer alongside the Maui dolphin sanctuary and that appropriate policy linkages be made as a consequential amendment.
55 – Kiwis Against Seabed Mining	1327	Amend Submitter seeks amendment to Schedule 4 of the Plan so that rules that prohibit or restrict activities in fishing, seabed mining and oil and gas, in relation to the values of the area, are identified through marine spatial planning.	Decline The Hearing Panel recommends declining the relief sought by the submitter in that rules in the Plan are confined to giving effect to the RMA and the Council's

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Further submissions – Ministry for Primary Industries (16)		Oppose	jurisdictional responsibilities pertaining to the coastal marine area. It is not for the Plan to get into areas covered by other authorities, statutes or jurisdictions. The Hearing Panel also notes that the Plan already utilizes a coastal area management approach which sets out, through the relevant rules, what areas may not be appropriate given the rule activity description. These areas have already been mapped and are shown in the Plan Schedules and online maps.
56 – Greenpeace	1328	Amend Submitter seeks amendment to Schedule 4A of the Plan by mapping to identify all significant areas, including the spatial extent of intrinsic relationship and biodiversity, to provide for the maintenance and enhancement of biodiversity in the wider coastal marine area.	Accept in part Mapping biodiversity values within the coastal marine area is a particularly difficult tasks primarily due to insufficient data sets. Further, there is a risk in providing incomplete information in regional plans such as this as it may produce a perverse outcome for those areas that have not been mapped or do not possess sufficient information to accurately determine the spatial values. Notwithstanding the above, the Council has reviewed spatial information to ascertain whether any additional biodiversity mapping overlays can be provided. As a result, the Hearing Panel recommends that the Important Bird Areas for New Zealand that occur within the Taranaki region be included as a planning layer alongside the Maui dolphin sanctuary and that appropriate policy linkages be made as a consequential amendment.
56 – Greenpeace	1329	Amend Submitter seeks amendment to Schedule 4 of the Plan so that rules that prohibit or restrict activities in fishing, seabed mining and oil and gas, in relation to the values of the area, are identified through marine spatial planning.	Decline The Hearing Panel recommends declining the relief sought by the submitter in that rules in the Plan are confined to giving effect to the RMA and the Council's jurisdictional responsibilities pertaining to the coastal marine area. The Hearing Panel suggest it is not appropriate or necessary for the Plan to get into areas covered by other authorities, statutes or jurisdictions.
Further submissions – Ministry for Primary Industries (16)		Oppose	
Schedule 4B – Sensitive marine benthic habitats			
6 – Trans-Tasman Resources Ltd	1330	Amend Submitter seeks amendment to the Plan by deleting Schedule 4B in its entirety.	Decline Sensitive benthic habitats refer to marine habitats identified in the report <i>Sensitive habitats and threatened species in the Taranaki coastal marine area (TCMA) – database investigation</i> . These areas of marine habitat have been identified to have a low tolerance to habitat damage and for which the time for the habitat to recover from any damage would be significant.
Further submissions – South Taranaki Underwater Club (10), Climate Justice Taranaki Inc (21), Department of Conservation (29), Te		Oppose	

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Rūnanga o Ngāti Mutunga (40), Royal Forest and Bird Protection Society (43), Te Atiawa (58), Te Rūnanga o Ngāti Ruanui Trust (61)			As part of a precautionary approach and given the sensitivity and vulnerability of such marine habitats, the Hearing Panel considers it appropriate that they be recognised and provided for within the Plan which requires reference to Schedules. Therefore, the Panel recommends retaining Schedule 4B [Sensitive marine benthic habitats] as currently notified.
Schedule 4C – Significant taonga species			
61 – Te Rūnanga o Ngāti Ruanui Trust	1331	<p>Amend</p> <p>Submitter seeks amendment to the Plan by including a new Schedule 4C that identifies taonga species under the <i>Ngāti Ruanui Claims Settlement Act 2003</i>:</p> <ul style="list-style-type: none"> • Hapuka / Groper (<i>Polypio oxygenios</i>) • Kaeo / Sea tulip (<i>Pyrva pachydermatum</i>) • Kahawai / Sea trout (<i>Arripus trutta</i>) • Kanae / Mullet (<i>Mugil cephalus</i>) • Koeke / Common Shrimp (<i>Palaemon affinis</i>) • Marari / Butterfish (<i>Odax pullus</i>) • Moki / Blue moki (<i>Latridopsis ciliaris</i>) • Paraki/Ngaiore / Common Smelt (<i>Retropinna retropinna</i>) • Para / Frostfish (<i>Lepidopus caudatus</i>) • Patiki mahoao / Black Flounder (<i>Rhombosolea retiaria</i>) • Patiki rore / New Zealand sole (<i>Peltorhamphus novaezeelandise</i>) • Pakiti tore / Lemon sole (<i>Pelotretis flavilatus</i>) • Patiki totara / Yellow belly flounder (<i>Rhombosolea leporina</i>) • Patiki / Sand flounder (<i>Rhombosolea plebeia</i>) • Patukituki / Rock cod (<i>Parapecis colias</i>) • Pioke / Rig shark (<i>Galeorhinus galeus</i>) • Reperepe / Elephant fish (<i>Callorhynchus milli</i>) • Tuna heke / Eel – long finned (<i>Anguilla dieffenbachii</i>) • Tuna roa / Eel –short finned (<i>Anguilla australis</i>) • Wheke / Octopus (<i>Octopus maorum</i>) 	<p>Accept</p> <p>The Hearing Panel recognises that taonga species have important cultural value to Māori and recommends including a new Schedule (Schedule 4C [Taonga Species]) to identify those marine species that hold significant value to local iwi. These species were identified through the iwi deeds of settlement and confirmed through pre-hearing engagement.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Schedule 5A – Archaeological sites of significance and historic areas			
50 – Te Kāhui o Taranaki Trust	1332	Amend Submitter seeks amendment to Schedule 5A of the Plan (and associated planning maps) by deleting the archaeological site names and instead give the sites a number and scheduling system identical to the mapped Taranaki Iwi sites of significance in the Plan.	Decline The Hearing Panel is unsure about the intent and exact request by the submitter., However, with regards to the names of archaeological sites of significance, the Hearing Panel considers the names to be important identifiers that will aid Plan users. Many of these sites are already identified in other Council reports that do not follow a numbering system and removing names would make it difficult to cross reference to these documents resulting in a potentially limited understanding of the scope and values associated with the location.
57 – Heritage New Zealand	1333	Amend Submitter seeks amendment to the title of Schedule 5A of the Plan to read: <i>Archaeological sites of significance, <u>built heritage</u> and historic areas.</i>	Accept The Hearing Panel recognises that Schedule 5A [Archaeological sites of significance and historic areas] contains areas of built heritage, and although the definition for historic heritage includes built heritage, the Hearing Panel considers the inclusion of ' <i>built heritage</i> ' better clarifies what is included within the Schedule and recommends it be amended as requested by the submitter.
57 – Heritage New Zealand	1334	Amend Submitter seeks amendment to the maps within Schedule 5A to reduce ambiguity of mapped sites by: <ul style="list-style-type: none"> • mapping the extent of scheduled sites (if site extents are unknown use buffer zones) • connecting sites on the maps with specific scheduled sites • specifying dates for all sites. 	Accept in part The Hearing Panel recommends granting the relief sought in part as follows: <ul style="list-style-type: none"> • The archaeological sites of significance listed in Schedule 5A do not contain polygons. The Panel does not consider it appropriate to include buffer zones and would prefer to manage these sites on a case-by-case basis through the consenting process having regard for the particular activity and likely effects occurring within their vicinity. The Hearing Panel recommends retaining the point locations of archaeological sites of significance as currently notified. • With regards to connecting sites identified on maps with the schedules, the Hearing Panel recommends adding the listing number that appears in the far left column of the schedule, to the pop up information on the planning maps to aid users in identifying specific locations within the map and correlating them to the relevant information within the schedules. Additional information is also recommended for Plan users ease of use of the planning maps and includes any archaeological/historic reference included in the Schedule.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<ul style="list-style-type: none"> Dates have been included in the Schedules for as many sites as are known with the exception of the Harriet and Lord Worsley shipwrecks which were built in 1819 and 1858, respectively. The Panel recommends amending the Schedule to include this additional data.
57 – Heritage New Zealand	1335	Amend Submitter questions the rationale for why two sites in the Scoping Study were not included in the Schedule and when the Scoping Study will be updated.	No relief required Review of the Scoping Study has revealed only one site that has not been included within the Plan: the Railway Wharf, Waitara. The location of this wharf (as determined within the Scoping study) at its most northerly extent, began at High Street in the Waitara township and extended southwards, meaning that this site is outside the coastal marine area. The Scoping Study will most likely be reviewed in preparation for the next Coastal Plan review in 10 years. As an interim measure, the Council contacted archaeologist Andy Dodd to review the Schedule who confirmed that it was up-to-date.
Schedule 5B – Sites of significance to Māori and associated values			
15 – Surfbreak Protection Society	1336	Support Submitter support the inclusion of sites of significance to Māori and associated values in the list of Schedules.	No relief necessary Support noted.
21 – Climate Justice Taranaki	1337	Amend Submitter seeks amendment to Schedule 5B of the Plan to include sites of significance to Ngāti Maru.	Decline The Ngāti Maru rohe does not extend to the coastal environment or the coastal marine area, nevertheless, the Council recognises that there still may be sites of significance to Ngāti Maru despite their geographic location. The Hearing Panel notes that Ngāti Maru have not provided comment on the Coastal Plan and have not requested correspondence with the Council to discuss any sites of significance that may be affected by the Coastal Plan. Ngāti Maru have received correspondence from the Council informing them of the Proposed Coastal Plan and have had the opportunity to respond. It is not the Council's intent to include this information without the request and/or approval of the relevant iwi authority.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
40 – Te Rūnanga o Ngāti Mutunga	1338	Amend	Accept
		Submitter supports the inclusion of sites of significance to Te Rūnanga o Ngāti Mutunga and associated values in the list of Schedules but seek the inclusion of additional sites.	Comments noted. Council has worked with Ngati Mutunga during pre-hearing engagement to identify additional sites of significance. This has resulted in additional sites being identified and included in the Schedules and associated planning map layers.
41 – Te Korowai o Ngāruahine Trust	1339	Neutral	No relief necessary
		Submitter would like the opportunity to amend and refine Schedule 5B as required as Ngāruahine hapū progress the claims under the <i>Takutai Moana Act 2011</i> .	Comments noted. The Council recognises that successful claims under the <i>Takutai Moana Act 2011</i> would result in legislative recognition of sites that would come under Schedule 5B [Sites of Significance to Māori]. The Council will allow review of the Schedule at a designated time, within the life of the Plan, in order to incorporate additional sites that have been recognised through the <i>Takutai Moana Act 2011</i> .
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	Notwithstanding the above, the Hearing Panel notes that they will have legal status in any case.
42 – Ngati Rahiri Hapū	1340	Amend	Accept
		Submitter seeks amendment to the Plan to include sites of significance to Ngati Rahiri Hapū (and not information contained in the New Plymouth Draft District Plan).	The Hearing Panel recommends granting the relief sought. The Hearing Panel notes that Te Atiawa Iwi has directed the Council to liaise with their hapū as part of Coastal Plan engagement, including the identification of sites of significance. The Council has consulted further with the submitter as part of pre-hearing consultation to investigate the inclusion of additional sites of significance and recommend the inclusion of additional sites as identified in Schedule 5B.
57 – Heritage New Zealand	1341	Amend	No relief necessary
		Submitter seeks amendment to the maps within Schedule 5B of the Plan using polygons to more accurately define the extent of the sites of significance to Māori.	Sites of significance to Māori have been identified by the local iwi and hapū through Council interaction and communication. The sites listed in Schedule 5B are delineated using polygons as identified in these meetings. The Hearing Panel does not consider it necessary to review these sites without the expressed request from iwi/hapū themselves.

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
57 – Heritage New Zealand	1342	Amend Submitter seeks amendment to the Ohunuku map (Ngāruahine) with appendix information supplied by the Heritage New Zealand submission.	Accept The Hearing Panel notes that the submitter's request was proposed to Ngāruahine who have indicated their support for the amendment as sought by the submitter but also wish the site spelling to be corrected to Ōhounuku. The Hearing Panel recommends amending the site extent and spelling as requested.
60 – Te Kaahui o Rauru	1343	Amend Submitter seeks amendment to Schedule 5B of the Plan - Ngaa Rauru Kītahi by: <ul style="list-style-type: none"> including schedule from <i>Ngaa Rauru Kītahi Claims Settlement Act 2005</i> amending site extents including Tapuarau Conservation Area. 	Accept in part The Tapuarau Conservation area is currently identified as an area of outstanding value under Schedule 1 and the Waitotara estuary has been identified as a site of significance to Māori. Sites of significance refer to specific areas or places that have special significance to tangata whenua for their cultural, historical, traditional and spiritual associations within the coastal marine area. The Hearing Panel notes that the extent of sites of significance identified in the Proposed Plan so far is based on the outcomes of discussions and the provision of information by Te Kaahui o Rauru. Notwithstanding the above, in relation to the Tapuarau Conservation Area, officers recommend granting this part of the relief sought. Officers note that the Conservation area extent is identified in the <i>Ngaa Rauru Kītahi Claims Settlement Act 2005</i> and that the values associated with the site are significant to Ngaa Rauru. The Hearing Panel recommends Tapuarau Conservation Area be included in Schedule 5B and the extent identified in the planning maps.
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
61 – Te Rūnanga o Ngāti Ruanui Trust	1344	Amend Submitter seeks amendment to Schedule 5B of the Plan by amending the heading to read: <i>Schedule 5 – <u>Cultural and</u> historic heritage</i>	Decline The Hearing Panel note that “ <i>historic heritage</i> ” has a broad definition under Section 2 of the RMA and includes sites of significance to Māori. Section 2 definition of “historic heritage” reads as follows: <i>“...historic heritage means:</i> <i>(a) those natural and physical resources that contribute to an understanding and appreciation of New Zealand's history and cultures, deriving from any of the following qualities:</i> <i>(i) archaeological,</i> <i>(ii) architectural,</i> <i>(iii) cultural,</i> <i>(iv) historic, [...].”</i>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			The term cultural heritage potentially has a much broader meaning. Therefore, the Hearing Panel recommends retaining the title for Schedule 5 as currently notified.
61 – Te Rūnanga o Ngāti Ruanui Trust	1345	Amend	Accept in part In pre-hearing consultation with the submitter, Council has discussed the inclusion of additional sites of significance to Ngati Ruanui and the Hearing Panel recommends amending Schedule 5B to include some of these as well as other additional sites. This includes the addition of new pa and kianga sites as well as the identification of important mahinga kai sites along the coastal reef systems. The Hearing Panel notes that the additional sites are not limited to the list of waterbodies provided by the submitter, however, are generally identified next to or near an important waterbody as indicated in the submission. Recommended amendments are identified in Schedule 5B as well as in the planning maps.
		In relation to sites of significance to Ngāti Ruanui, submitter seeks amendment to Schedule 5B of the Plan (noting information is to follow) to include information on: <ul style="list-style-type: none">• Te Moananui A O Ngati Ruanui (Coastal Area)• Waingongoro River• Manawapou River• Waihi Stream• Katewheta Stream• Waikaikai Stream• Mangaroa Stream• Kaikura Stream• Whitikau• Tangahoe-Hawera-Manutahi Reef.	
Further submissions – Trans-Tasman Resources Ltd (6)		Oppose	
Further submissions – Te Rūnanga o Ngāti Mutunga (40), Te Atiawa (58)		Support	
Schedule 7A – Surf breaks			
5 – Point Board Riders	1346	Amend	Decline
		Submitter supports the inclusion of the designated Significant Surfing Area as an overlay in Schedule 7B for protection but submit that the area from Pungarehu to Okato is only a small area and seek to have more of the coastline added to the overlay.	Support for the Significant Surfing Area noted. In relation to extending the Significant Surfing Area, no change is recommended. The area identified was a result of MetOcean Solutions Ltd advice arising from the report <i>Taranaki Surfbreaks of National Significance</i> , highlighting the abundance, uniqueness and large number of high quality surf breaks in that locality. The number and significance of surf breaks in this locality was subsequently confirmed through the <i>Online Wave Survey</i> .

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			Notwithstanding the above, the Hearing Panel notes that regionally significant surf breaks outside the area still have a high level of protection in accordance with Policy 19 [Surf breaks and significant surfing area].
5 – Point Board Riders	1347	Amend	Decline
		Submitter supports the inclusion of Nationally Significant surf breaks and Locally Significant surf breaks but raise the issue of a lack of protection for the remaining surf breaks on the coast.	The Hearing Panel is not currently aware of any additional surf break locations that are not already included within Schedule 7 and have worked closely with the local surfing community in addition to commissioning a report on regionally significant surfbreaks and undertook a surfing community survey to establish the current list. The intention of Schedule 7 is to provide a high level of protection to those surfbreaks that display significant surfing qualities through Policy 19 [Surf breaks and Significant Surfing Area].
15 – Surfbreak Protection Society	1348	Amend	Decline
		Submitter supports the inclusion of the designated Significant Surfing Area but seeks that it be extended to include a larger area and that more surf breaks be added to the locally significant list.	The Hearing Panel considers the extents of the Significant Surfing Areas to be sufficient and recognise that, due to tidal changes and changing weather conditions, a surfable area may be larger or smaller than the area identified in the maps. The polygons depicted are intended to capture the commonly utilised areas on any given day. The Hearing Panel is not currently aware of any additional surf break locations that are not already included within Schedule 7 and notes that the Council has worked closely with the local surfing community in addition to commissioning a report and undertaking a surfing community survey on regionally significant surfbreaks to establish the current list. The intention of Schedule 7 is to provide a high level of protection to those surfbreaks that display significant surfing qualities through Policy 19 [Surf breaks and Significant Surfing Area]. The Council will welcome any additional information for the inclusion of other surfbreaks if they can be valued for their surfing qualities.
18 – Surfing Taranaki	1349	Support	No relief required
		Support the designated Significant Surfing Area as proposed in the Plan.	Support noted.
19 – South Taranaki District Council	1350	Amend	Accept
		Support the inclusion of the designated Significant Surfing Area but seeks that it be confined to the coastal marine area.	The Hearing Panel notes the submitter's concern and recommend amending the landward extent of the significant surf break area to align with the indicative coastal

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Further submissions – Powerco (45)		Support in part	marine area line so as to not capture private land. The Hearing Panel also recommends amending the extent of the Significant Surfing area and confining it to the coastal marine area.
20 – Meridian Energy Limited	1351	Amend	Accept
		Submitter seeks amendment to the Plan and associated Planning Maps to show the locations of locally significant surf breaks.	The Hearing Panel agrees and recommends amending the planning maps to identify the locations of locally significant surf breaks.
24 – Paora Aneti 17 & 18 Māori Reservation Trustees	1352	Amend	Accept
		Submitter opposes the inclusion of sections of Paora Aneti 18 amongst surf breaks identified as nationally or regionally significant.	The Hearing Panel notes the submitter's concern and recommend amending the landward extent of the significant surf break area to align with the indicative coastal marine area line so as to not capture private land.
24 – Paora Aneti 17 & 18 Māori Reservation Trustees	1353	Other	Accept
		Submitter suggests the Plan shows a lack of regard to the Māori language by having an area for surfing identified as "Punihos".	The submitter has not specifically sought any amendments to the Plan. However, the Hearing Panel recommend amending the name of the surf break to Punihos in response to their concerns. Additional amendments to Schedule 7 are also recommended to include the incorporation of traditional Māori names (where they are known) for the surf breaks identified.
31 – Komene 13B Māori Reservation Trustees	1354	Amend	Accept
		Submitter opposes the inclusion of sections of Komene 13 Māori Reservation via Waikirikiri Lagoon in the Plan, including the surf break area AND Note that "Waikirikiri" is not the name of the area.	The Hearing Panel notes the submitter's comments and recommends amending the landward extent of the significant surf break area to align with the indicative coastal marine area line so as not to capture private land.
32 – Port Taranaki Ltd	1355	Amend	Grant in kind
		Submitter seeks amendment to Schedule 7A of the Plan to delete the "Breakwater" surf break from the list of regionally significant surf breaks, and delete references to it on associated maps.	At the hearing, the submitter tabled further evidence from Oceanum consultants on the values and relative significance of the breakwater surf break. In summary, it was argued that the break did not merit being identified as 'regionally significant' as it was entirely anthropogenic and that with the exception of uniqueness (ability to surf under certain conditions) ranked low for other surfing attributes. The Hearing Panel agrees with the aforementioned assessment and recommend that Schedule 7A of the Plan and associated planning maps be amended to delete the 'Breakwater' surf break from the list of regionally significant surf breaks

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
			<p>(although it is recommended that it still be identified in the schedule as being 'locally significant').</p> <p>As a consequential amendment, the Hearing Panel recommend deleting the exclusion for regionally significant infrastructure in Policy 19 (b) [Surf breaks and Significant surfing Area] as the matter has now been addressed through other means and note that the exception is now redundant.</p>
49 – Cam Twigley	1356	Amend	No relief necessary
		Submitter supports the inclusion (and the extent) of the designated Significant Surfing Area.	Support noted.
50 – Te Kāhui o Taranaki Trust	1357	Amend	Grant in kind
		Submitter seeks amendment to Schedule 7A of the Plan (and associated planning maps) by deleting the surf break names instead give the sites a number and scheduling system identical to the mapped Taranaki Iwi sites of significance in the Plan.	<p>Through pre-hearing engagement the submitter (and others) identified that some of the surf break names were incorrect or offensive, which was the basis for the relief requested.</p> <p>The Hearing Panel considers the surfbreak names to be important and useful identifiers of surfbreaks that will aid Plan users in this area.</p> <p>The Hearing Panel recommends an alternative relief that, where possible, alternative and/or more culturally appropriate surfbreak names are incorporated alongside the currently identified surf break names commonly in use amongst the surfing community.</p>
50 – Te Kāhui o Taranaki Trust	1358	Amend	Decline
		Submitter seeks amendment to Schedule 7A of the Plan (and associated planning maps) by delineating the surf breaks in terms of location like the Taranaki Iwi sites of significance.	<p>Surf break locations have not been delineated by the Council. Delineating surf breaks would be an imprecise and expensive exercise and was not considered necessary for the purposes of this review. However, point locations will be added to the planning maps to identify where the surfbreaks occur within the coastal marine area.</p> <p>Notwithstanding the above, the Hearing Panel recommends including additional information relating to the surf breaks within Schedule 7 and the planning layer to use traditional naming of surf break locations alongside the commonly recognised surf break names.</p>

Submitter	Submission point	Submitter's requests	Hearing Panel' recommendation and response
Schedule 8 – Port air zone			
32 – Port Taranaki Ltd	1359	Amend	Accept
		Submitter seeks amendment to Schedule 8 of the Plan (and associated maps) to include the wharves in the Port Air Zone and correspond to the online maps for the Port Air Zone.	The Hearing Panel recommends amending Schedule 8 to include wharves within the Port Air Zone to be consistent with the areal extent of maps online.
Schedule 9 – References			
48 – Taranaki District Health Board	1360	Amend	Accept
		<p>Submitter seeks amendment to Schedule 9 of the Plan to read:</p> <p><i>The documents referenced throughout the Plan are listed below, along with the website addresses that provide access to the documents. <u>Note that New Zealand Standards listed below are subject to copyright and are not available to be viewed on-line and may be inspected by appointment at our customer service centre.</u></i></p> <p>[...]</p> <p><u>Noise standards (Rules 6.10, 8.6.3)</u></p> <p><u>NZS 6801:2008 Acoustics – Measurement of Environmental Sound</u></p> <p><u>NZS 6802:2008 Acoustics – Environmental Noise</u></p> <p><u>NZS 6803:1999 Acoustics – Construction noise</u></p> <p><u>NZS 6809:1999 Acoustics – Port Noise and Land Use Planning</u></p>	<p>The Hearing Panel recommends amending the Plan to include reference to the requested standards in Schedule 9, however note that some changes to those requested by the submitter are also recommended to account for other relief offered within the Plan, to read as follows:</p> <p><u>New Zealand standards (General standards)</u></p> <p><u>NZS 6809:1999 Acoustics – Port Noise and Land Use Planning</u></p> <p><u>NZS 6807:1994 Noise Management and Land Use Planning for Helicopter Landing Areas</u></p> <p><u>NZS6803:1999 Acoustics – Construction Noise</u></p> <p><u>NZS 6801:2008 Acoustics – Measurement of Environmental Sound</u></p> <p><u>NZS 6802:2008 Acoustics – Environmental Noise</u></p> <p><i>Note: the New Zealand Standards are subject to copyright and are not available to be viewed on-line and may be inspected, by appointment, at the Council premises.</i></p>

Appendix I: Evidence and other written material presented at the hearing

This section presents copies of the evidence and other written material presented at the hearing of the Proposed Coastal Plan for Taranaki.

Thank you for the opportunity to speak to my submission. The Taranaki Energy Watch (TEW) original submission remains unchanged through the pre-hearing process. We take this opportunity to emphasise some specific points and include some additional information.

Drilling petroleum wells

- (i) The proposed plan continues to classify exploratory offshore petroleum drilling as a controlled activity (Rule 26).
 - a. In the current plan there are 10 consents required for petroleum exploration- 6 are discretionary and 4 are permitted. Under the RMA these would be bundled and default to the highest status- discretionary. The Council has bundled them into a single controlled activity.
 - b. Both the Section 42a Report and the Offshore Drilling Review emphasise this is for business certainty as applications for a controlled activity can't be turned down.
 - (i) "Some certainty for these uses is considered appropriate which would not be the case if the activity was made a Discretionary Activity (with ability to decline a resource consent application)."¹
 - (ii) "Operator costs are likely to remain similar should exploratory offshore petroleum drilling be classified as a controlled activity that will be non-notified. However, the operator will benefit through having business certainty as applications for a controlled activity cannot be turned down by Council. Applications to undertake a discretionary activity, as currently required, can be turned down by Council."²
 - c. There is no environmental evidence provided in the s42a report and this is not a decision based on the RMA legislation. A regional plan prepared having regard to Part 2 of the Act should contain a coherent set of objectives provisions that achieve environmental outcomes.
 - d. The controlled activity status also precludes public notification. See Attachment 1.
- (ii) It is not appropriate to rely on compliance with relevant legislation and regulations managing well integrity and discharges (Matters of control/discretion (a)).

¹ <https://www.trc.govt.nz/assets/Documents/Plans-policies/CoastalPlanReview/Hearing/PCASect41A-hearing.pdf> at p.319

² <https://www.trc.govt.nz/assets/Documents/Plans-policies/CoastalPlanReview/OffshorePetroleumDrillingReview.pdf> at p.27

The recent interim findings of Taranaki Energy Watch v STDC state that WorkSafe can manage these issues however they cannot eliminate them. While the findings relate to onshore petroleum activities they are equally applicable to offshore petroleum activities.

- a. "The key point being, where a risk is minimised, because it cannot be eliminated, there is no absolute guarantee that incidents or accidents will be prevented or that harm will be prevented. Instead, measures are to be implemented to minimise those risks so far as practicable. Thus it cannot be imputed that compliance with WorkSafe legislation and regulation means risk is eliminated".³
- (iii) The section 42 a report states "The drilling associated with seabed exploration is not considered to have more than minor adverse effects, subject to compliance with standards, terms and conditions set out in Rule 26".⁴
 - a. As discussed previously complying with WorkSafe legislation does not guarantee adverse effects will be eliminated.
 - b. Drilling does have potential "more than minor adverse effects" regardless of the conditions set by Rule 26. For example while a well blow out may have a low probability it has catastrophic effects. This is also emphasised in the recent interim findings of Taranaki Energy Watch v STDC.⁵
- (iv) It is not clear from the proposed plan how the Council are going to accommodate the transition of an exploration well to a production well.
 - a. Currently the proposal is for drilling an exploratory well to be controlled (Rule 26) and drilling production wells to be discretionary (Rule 29). However the wells are both the same and obviously in the same location.
 - b. When a well is drilled it is initially an exploratory well, if nothing is found then it is abandoned. If something is discovered the same well becomes a production well. Basically the well is the same- exploratory and then producing. This would suggest

⁴ https://www.trc.govt.nz/assets/Documents/Plans_policies/CoastalPlanReview/Hearing/PCASect41A-hearing.pdf at p.318

⁵ <https://environmentcourt.govt.nz/assets/Documents/Publications/2018-NZEnvC-227-Taranaki-Energy-Watch-Incorporated-v-South-Taranaki-District-Council.pdf>

that exploratory and production activities need to be bundled together to determine if the site is appropriate at the outset.

- (v) TEW continue to submit that petroleum exploration should be a discretionary activity and publicly notified.

Prohibited status for petroleum activities in outstanding coastal management areas

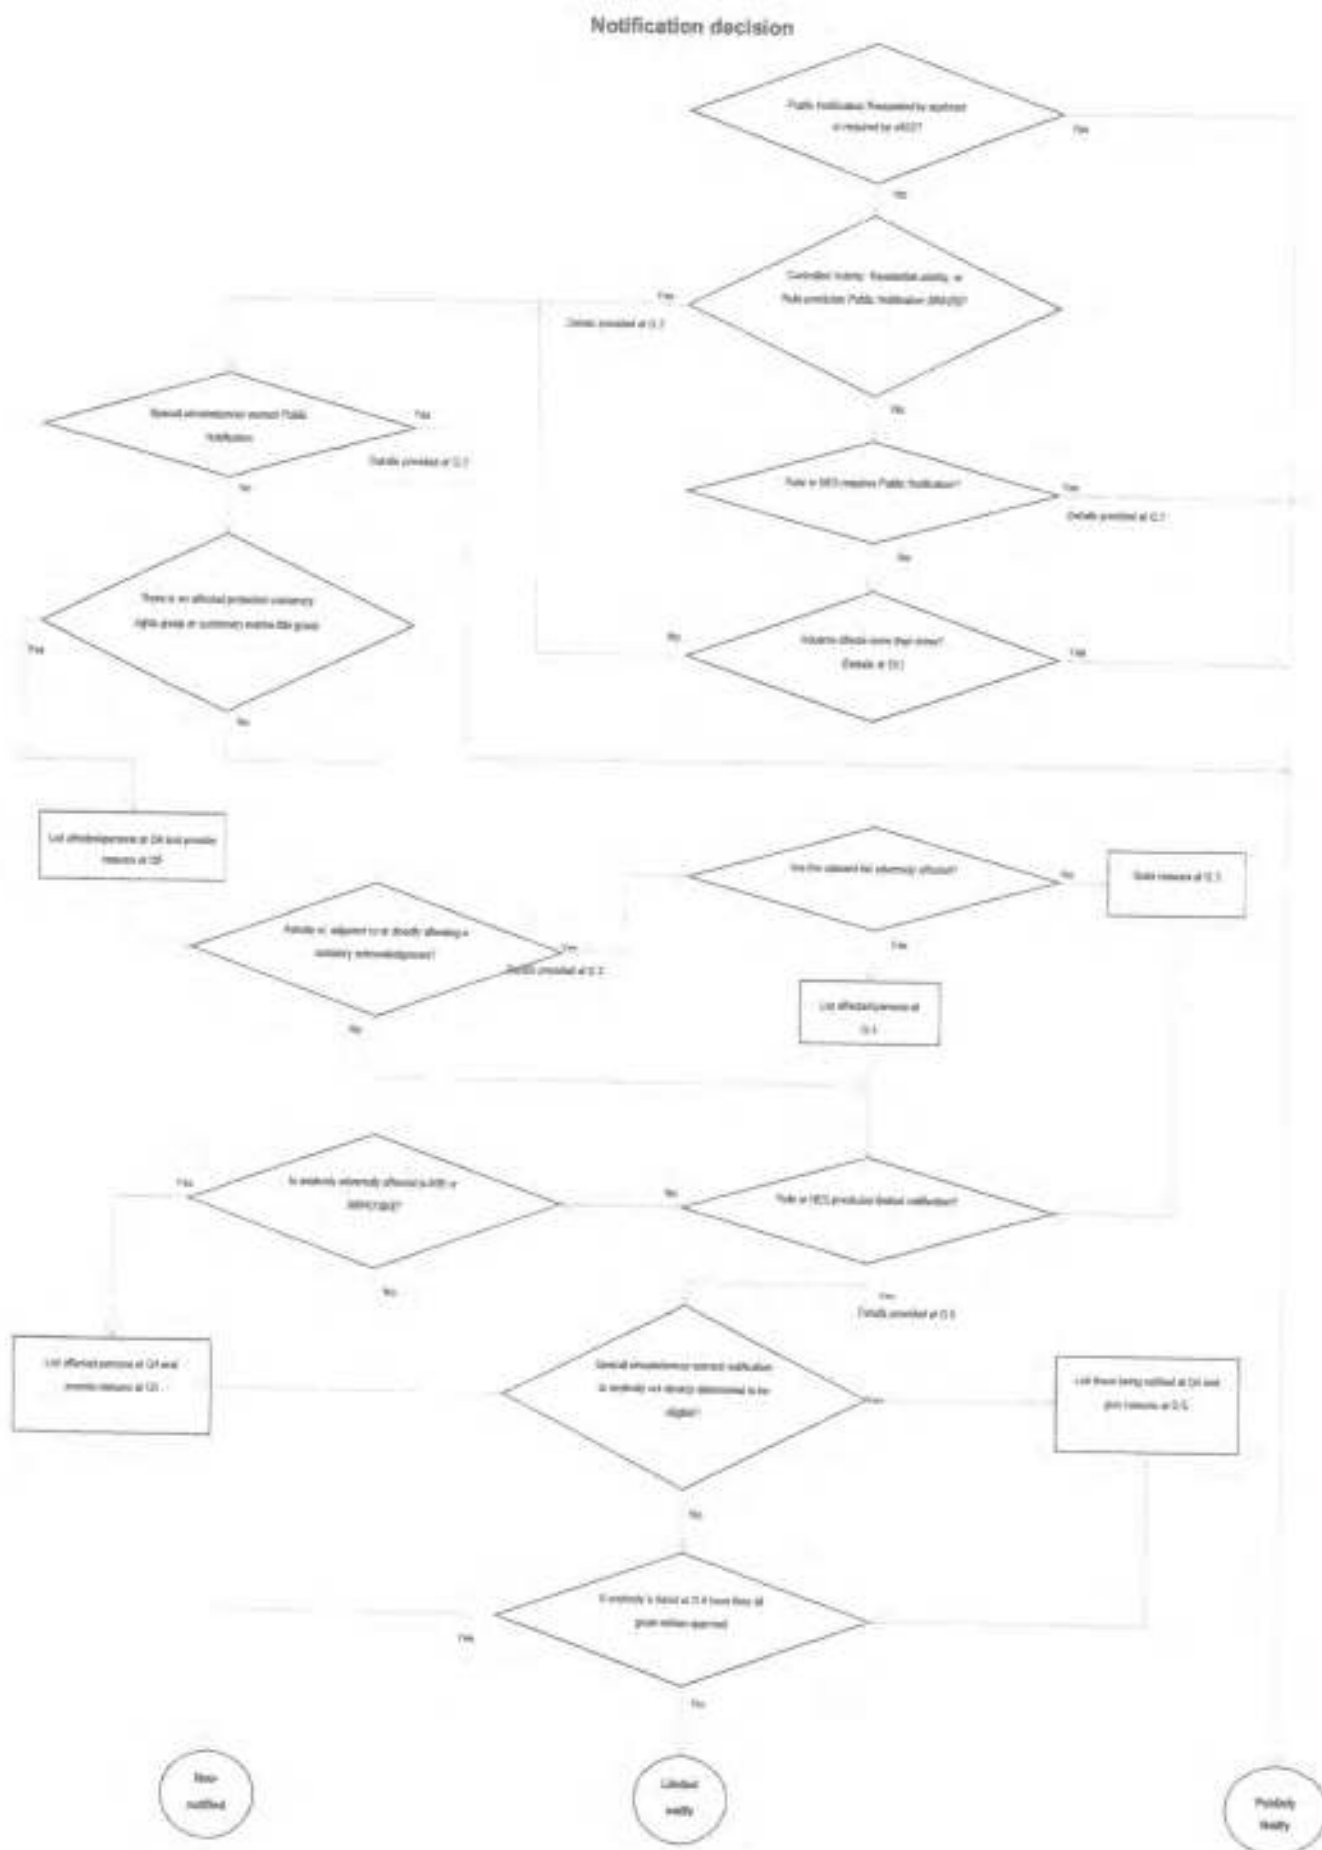

- (i) Policy 29 has a new additional statement added "(aa) in relation to offshore production activities, adopting adequate separation and buffer distances having regard to the values and sensitivity of the environment."
 - a. The outstanding coastal management area would meet the requirements of this policy.
 - b. Rule 30 allows for non-complying status for petroleum production installation including drilling producing wells in outstanding value coastal management areas. Consequentially this policy would direct the Council to avoid this activity in these management areas therefore it would be in effect a prohibited activity.
 - c. Given that exploratory wells become producing wells it would then be appropriate to safeguard this area making it a prohibited activity for exploration wells as even if they are successful policy directs them away from this area.

Other

- (i) The addition to Rule 26 of "the activity does not involve the discharge or deposition of drilling fluids or cuttings" and "drilling cuttings and fluids must be removed for authorised disposal" has been proposed in the s42 a report.
 - a. For completeness and recognising this decision was informed by a commissioned review of buffer distances TEW request that the wording to be "drilling fluids or cuttings or muds".⁶

⁶ <https://www.trc.govt.nz/assets/Documents/Plans-policies/CoastalPlanReview/BufferDistances.PDF>

- b. In the s42 a report it is unclear what the Council intends by authorised disposal and what legislation covers this as it still is a discharge.

BEFORE THE TARANAKI REGIONAL COUNCIL

Under **The Resource Management Act 1991**

And

In the matter of **The Proposed Coastal Plan for Taranaki**

Legal submissions on behalf of the Minister of Conservation

16 July 2019

Department of Conservation

P O Box 10 420

WELLINGTON

Solicitor acting: M Downing

Telephone: 027 564 1428

Email: mdowning@doc.govt.nz

MAY IT PLEASE THE PANEL

INTRODUCTION

1. These legal submissions focus on outstanding issues between the Minister of Conservation (Minister) and the Taranaki Regional Council (TRC or Council). They provide the legal context and basis to support the remaining amendments to the Proposed Coastal Plan for Taranaki (Proposed Plan) sought by the Minister, where relevant.
2. The changes recommended in the s 42A report go some way to addressing the issues raised in the Minister's submission and further submission.
3. However, further changes are required to ensure the Minister's concerns are fully addressed, the Department of Conservation (DOC or Department) functionaries can properly undertake their statutory functions, and that the requirements under the Resource Management Act 1991 (RMA) are met.

MINISTER OF CONSERVATION'S FUNCTIONS IN THE COASTAL MARINE AREA

4. The Minister, rather than the Director-General of Conservation, submitted on the Proposed Plan. This is because the Minister has the function of approving regional coastal plans in accordance with Schedule 1 of the RMA.¹ The Minister also monitors the effect and implementation of the New Zealand Coastal Policy Statement (NZCPS).²

EVIDENCE

5. The Minister's case is supported by the evidence from the following five witnesses:
 - a. **Mr Don Neale**, marine technical advisor at the Department of Conservation, on marine ecology;
 - b. **Dr David Lundquist**, technical advisor (marine species and threats), on the Code of Conduct for Minimising Acoustic Disturbance to Marine Mammals from Seismic Survey Operations;

¹ RMA, section 28(b).

² RMA, section 28(d).

- c. **Ms Sarah Hucker**, senior national RMA advisor at the Department of Conservation, on marine biosecurity;
- d. **Mr Callum Lilley**, senior ranger, on operational work undertaken by the Department, including the burial of marine mammals.
- e. **Mr Graeme Silver**, senior planner at the Department of Conservation.

OUTLINE

- 6. These legal submissions are organised under the following headings:
 - a. Statutory requirements;
 - b. NZCPS Policy 11.
 - c. NZCPS Policies 13 and 15.
 - d. Coastal hazards.
 - e. Biofouling.
 - f. Other remaining matters.
 - g. Conclusion.

STATUTORY REQUIREMENTS

- 7. It is expected that the law applying to proposed plans will be summarised in the submissions of other parties. I do not intend to repeat that here, however there are two RMA matters which I outline below: coastal occupation charges and the NZCPS.

Coastal occupation charges

- 8. In preparing a regional coastal plan, the council must comply with the statutory requirements set out in section 64A of the RMA. The Minister cannot approve a coastal plan that does not comply with section 64A.
- 9. Section 64A(1) requires regional councils to consider introducing coastal occupation charging regimes into coastal plans (if such a regime does not already exist).

10. Under section 64A, regional councils are entitled to forgo a coastal charging occupation charging regime. However in this instance, section 64A prescribes certain steps to be followed:

64A Imposition of coastal occupation charges

- (1) Unless a regional coastal plan or proposed regional coastal plan already addresses coastal occupation charges, in preparing or changing a regional coastal plan or proposed regional coastal plan, a regional council must consider, after having regard to—
- (a) the extent to which public benefits from the coastal marine area are lost or gained; and
 - (b) the extent to which private benefit is obtained from the occupation of the coastal marine area,—

whether or not a coastal occupation charging regime applying to persons who occupy any part of the common marine and coastal area should be included.

- (2) Where the regional council considers that a coastal occupation charging regime should not be included, a statement to that effect must be included in the regional coastal plan.

...

11. The evidence of Mr Silver highlights that there is currently uncertainty as to whether the Taranaki Regional Council has undertaken the statutory steps outlined in paragraph 10 above.³ The reference to “the Council is not operating a charging regime for occupation of the coastal marine” in Chapter 9 of the Proposed Plan does not suffice, particularly as there seems to be no record of decision-making to satisfy that the statutory process in section 64A has been followed.⁴

12. Mr Silver’s evidence offers a practical solution to the matter.

New Zealand Coastal Policy Statement

13. Section 67(3) of the RMA requires that the Proposed Plan must give effect to the NZCPS, any other national policy statement, and the relevant regional policy statement.

³ Statement of evidence of Graeme Silver dated 12 July 2019, at [10]-[16].

⁴ Statement of evidence of Graeme Silver dated 12 July 2019, at [17]-[18].

14. The purpose of the NZCPS is to state objectives and policies in order to achieve the purpose of the RMA (being to promote sustainable management) in relation to the coastal environment of New Zealand.⁵ Accordingly, it is said that “the NZCPS gives substance to part 2’s provisions in relation to the coastal environment.”⁶ Relevant objectives and policies of the NZCPS for the purposes of this hearing are reproduced in Appendix One.
15. In a plan preparation context, the statutory requirement is “to give effect to” the NZCPS. This means “implement”.⁷ This has been recognised as being a “strong directive,”⁸ and one that creates “a firm obligation on the part of those subject to it”.⁹
16. The implementation of the NZCPS is affected by what the objective or policy relates to, or what must be given effect to. Accordingly, the terms of the NZCPS, and the extent to which they are directive is critical:¹⁰

A requirement to give effect to a policy which is framed in a specific and unqualified way may, in a practical sense, be more prescriptive than a requirement to give effect to a policy which is worded at a higher level of abstraction.

17. Accordingly, in giving effect to the NZCPS, it is of course critical to consider the precise wording of the objective or policy in issue. Is it formulated in a directive way, or is it formulated in a way that confers wide flexibility in implementation? A requirement to “avoid”, which occurs in a number of NZCPS policies, is directive in nature, it means “not allow”, or “prevent the occurrence of”.¹¹

NZCPS POLICY 11

18. NZCPS Policy 11 requires that adverse effects of activities on threatened, at risk or naturally rare species, habitats or areas be avoided. For other indigenous

⁵ RMA, section 56.

⁶ *Environmental Defence Society v New Zealand King Salmon Co Ltd*, [2014] NZSC 38, [85].

⁷ *Environmental Defence Society v New Zealand King Salmon Co Ltd*, [2014] NZSC 38, [77].

⁸ *Environmental Defence Society v New Zealand King Salmon Co Ltd*, [2014] NZSC 38, [77].

⁹ *Environmental Defence Society v New Zealand King Salmon Co Ltd*, [2014] NZSC 38, [77].

¹¹ *Environmental Defence Society v New Zealand King Salmon Co Ltd*, [2014] NZSC 38, [96].

habitats and areas, Policy 11 requires significant adverse effects of activities to be avoided, and other adverse effects to be avoided, remedied or mitigated.

19. Policy 11 has come under scrutiny from the High Court since the *King Salmon* decision in the case of *Royal Forest and Bird Protection Society of NZ Inc v Bay of Plenty Regional Council*¹² which confirmed:
 - a. the meaning of ‘avoid’ is as discussed in *King Salmon* (i.e. ‘not allow’, or ‘prevent the occurrence of’) and is not contextual;¹³
 - b. where there is tension between planning documents, or within them, there is an obligation to articulate and analyse those tensions and to make a thoroughgoing attempt to reconcile those tensions;¹⁴
 - c. *King Salmon* does not allow for a proportionate or contextual approach;¹⁵
20. One of the policies in the proposed Bay of Plenty Regional Coastal Environmental Plan (RCEP), Policy N4, unequivocally sought to avoid adverse effects on the values and attributes of those areas. However, other policies recognised that it might be appropriate to grant consent for regionally significant infrastructure to locate in those areas in some circumstances. The Environment Court found that the provisions recognising regionally significant infrastructure represented a “proportionate response” which gave effect to those tensions recognised by the NZCPS.
21. On appeal the High Court found that the ‘proportionate response’ approach taken by the Environment Court was, in effect, a version of the “overall broad judgment approach” which the *King Salmon* decision had done away with. The High Court said:¹⁶

“[The Environment Court] was suggesting that the benefits and costs of regionally significant infrastructure, seeking to locate in Indigenous Biological Diversity Areas A and that could have adverse effects on such areas, should be assessed on a case by case basis, having regard to all relevant factors. Given the majority’s decision in *King Salmon*, this approach was not available to it.”

¹⁶ *Royal Forest and Bird v Bay of Plenty Regional Council* [2017] NZHC 3080, at [106].

22. The Minister supports the retention of policy 14 of the Proposed Plan as recommended in the s 42A report. In my submission, this implements NZCPS Policy 11 in the policy framework of the Proposed Plan.

Rules that do not give effect to the NZCPS

23. I submit there are some gaps in NZCPS Policy 11 implementation in the rule framework of the Proposed Plan. Mr Silver has identified proposed rules which provide for permitted or controlled activities within sites recognised by NZCPS Policy 11.
24. This could lead to Council being unable to prevent activities being undertaken that have adverse effects on sites which meet the criteria in NZCPS Policy 11. In some cases, the ability for these activities to occur will be inconsistent with the direction set by NZCPS Policy 11. In most cases, the inability to require effects to be avoided, remedied or mitigated will be inconsistent with NZCPS Policy 11 as a whole. Some examples follow.

Rule 22 – Placement or erection of a network utility structure (controlled activity)

25. The Minister opposed Rule 22 and sought that the burial of pipes and cables be a discretionary activity.
26. Mr Neale's evidence describes the range of adverse effects underground infrastructure can have on ecological values, particularly on more sensitive marine environments.¹⁷
27. Mr Silver's evidence notes that the species and habitats in Schedules 4A and 4B of the Proposed Plan do not capture all criteria in NZCPS Policy 11(a) – NZCPS Policies 11(a)(iv) and 11(a)(v) have been overlooked.¹⁸ Mr Silver's evidence is that Rule 22:

¹⁷ Statement of evidence of Donald Malcolm Neale dated 12 July 2019, at [30]-[31].

¹⁸ Statement of evidence of Graeme Silver dated 12 July 2019, at [104]-[105].

- a. does not include a standard that the activity does not occur in sensitive marine benthic habitats identified in Schedule 4B of the Proposed Plan, which are a habitat type that meets the criteria in NZCPS Policy 11(a).¹⁹
 - b. as a controlled activity, does not provide for the avoidance of adverse effects on sites that engage NZCPS Policies 11(a)(iv) and 11(a)(v); and
 - c. does not avoid significant adverse effects on sites that engage NZCPS Policy 11(b)(iii).²⁰
28. Thus, Rule 22 enables activities to occur which might have adverse effects on sites which meet the criteria in NZCPS Policy 11.
29. Despite there being matters of control in relation to location and effects on indigenous biodiversity values, there is no ability to decline consent on the basis of those effects.²¹ Accordingly, in my submission, the controlled activity status should not apply to those activities that engage the criteria in NZCPS Policy 11. Instead, the burial of pipes and cables should be removed from rule 22 and become a new rule with (at least) restricted discretionary status in all zones.
30. In my submission, accepting Mr Silver's recommendation is required for the Proposed Plan to give effect to Policy 11 of the NZCPS.

Rule 34 – other structure erection or placement not provided for in Rules 18-32

31. First Gas Ltd sought amendments to Rule 34 of the Proposed Plan to make network utility underground pipelines or pipelines attached to existing bridge or access structures in Outstanding Value coastal management areas a controlled activity (as opposed to non-complying). The Minister opposes that relief for similar reasons discussed in paragraphs 27-30. This could lead to Council being unable to prevent activities being undertaken that have adverse effects in Outstanding Value areas – in particular marine protected areas such as Parininihi Marine Reserve recognised under policy 1 of the Proposed Plan which trigger NZCPS Policy 11(a)(vi) as an area set aside for full or partial protection of indigenous biological diversity under other legislation.

¹⁹ Statement of evidence of Graeme Silver dated 12 July 2019, at [104]-[105].

²⁰ Statement of evidence of Graeme Silver dated 12 July 2019, at [118]-[121].

²¹ RMA, s 87A(2).

32. It is essential to retain the ability to refuse resource consent to ensure that NZCPS Policy 11 direction to “avoid adverse effects” is given effect to. It is therefore submitted that Mr Silver’s recommended amendment that the activities be restricted discretionary be accepted.

Rule 37 – network utility structure repair, alteration or extension

33. The Minister sought an additional standard to rule 37 placing a size limit on any extension to a network utility structure. The evidence of Mr Neale²² and Mr Silver²³ is that the addition of standard (aa) recommended by the s42A report, which limits extensions to 10% every 24 months, partly addresses the Minister’s concerns but could lead to significant adverse effects or cumulative adverse effects.
34. In my submission, the suggestions offered by Mr Silver to replace the “24 month” reference with a “5 year” reference will ensure the rule will not allow damage to indigenous biodiversity in a manner contrary to NZCPS Policy 11.

NZCPS POLICIES 13 AND 15

35. NZCPS Policy 13 relates to preservation of natural character and NZCPS Policy 15 relates to natural features and natural landscapes in the coastal environment. They provide a cascade of policy directions on how to protect natural character, natural features, and natural landscapes from inappropriate subdivision, use and development. Mr Silver notes that these policies have been partially implemented into the Proposed Plan by policies 8 and 9.
36. The inclusion of policies 8 and 9 in the Proposed Plan means the NZCPS is effectively implemented for discretionary and non-complying consents as policies 8 and 9 must be considered in the event consents for discretionary or non-complying activities are applied for. The inclusion of policies 8 and 9 in the Proposed Plan will be effective for restricted discretionary consents where landscape, natural character or natural features are a matter for discretion.

²² Statement of evidence of Donald Malcolm Neale dated 12 July 2019, at [34]-[35].

²³ Statement of evidence of Graeme Silver dated 12 July 2019, at [135]-[139].

37. With respect to the rules framework, a similar issue arises to that identified with NZCPS Policy 11 sites at paragraphs 27-30 of these legal submissions – there are controlled activity rules which do provide the ability for Council to refuse consent to ensure that NZCPS Policies 13 and 15 direction to “avoid adverse effects” is given effect to. For example, rule 22 makes the placement or erection of network utility structures a controlled activity in outstanding value areas (which include NZCPS Policy 13 and 15 sites).

38. Mr Neale notes that:²⁴

The burial of pipes or cables can help to mitigate some effects, but burial is seldom permanent in a dynamic coastal environment. The natural (or accelerated) processes of coastal erosion, sediment movement, bed changes and channel migration can expose an underground or buried structure over time. Once exposed, it will then function as an unburied structure laid on top of the substrate, with associated effects such as current modification and scour, navigation and entanglement issues, substrates for pest species, and changes to the natural character and visual amenity of the area.

39. This makes it even more critical to accept Mr Silver’s proposed changes to rule 22.

40. The evidence of Mr Silver is that:

- a. while the plan has included a schedule of areas of outstanding values (Schedule 2), it does not include criteria for identifying further areas;²⁵
- b. the lack of criteria for identifying further areas does not provide for values which can change over time.²⁶

41. Mr Silver also notes that the Proposed Plan does not give effect to NZCPS Policy 13(1)(c) in that it does not identify areas of “high natural character.”²⁷ NZCPS Policy 13(1)(c) is clear that areas of high natural character (at least) be mapped or otherwise identified.

42. The policies and rules of the Proposed Plan cannot solely apply to those listed identified areas in Schedule 2, as this precludes their application to any

²⁴ Statement of evidence of Donald Malcom Neale dated 12 July 2019, at [31].

²⁵ Statement of evidence of Graeme Silver dated 12 July 2019, at [68].

²⁶ Statement of evidence of Graeme Silver dated 12 July 2019, at [70].

²⁷ Statement of evidence of Graeme Silver dated 12 July 2019, at [73].

unidentified areas of high natural character when activities are proposed in those areas which require consent. Further, as the Proposed Plan does not capture all NZCPS Policy 13 and Policy 15 sites restricting policies to only those areas currently identified will not give effect to the requirement to avoid adverse effects on outstanding natural character areas, natural features and natural landscapes.

43. I therefore submit that Mr Silver's recommendations that the Proposed Plan includes criteria for identifying natural character, natural features, and landscape, and that high natural character areas are identified and mapped be accepted.

COASTAL HAZARDS

44. The Minister of Conservation, in her further submission, opposed the submissions by Z Energy Ltd, BP Oil Ltd and Mobil Oil Ltd seeking amendment to objective 13 of the Proposed Plan to qualify that the risk of social, cultural, environmental and economic harm from coastal hazards is not increased "to unacceptable levels".

45. As noted in the evidence of Mr Silver:²⁸

I consider that this amendment is inappropriate. An objective should identify the resource management outcome desired. In this case it is the reduction of risk from coastal hazards. The recommended amendment provides for instances where risks can be increased.

46. The reference to "to unacceptable levels" is not referred to, nor anticipated, by the NZCPS. The NZCPS has two policies which direct the avoidance and/or reduction of coastal hazards. NZCPS Policy 25 states (my emphasis):

Policy 25 Subdivision, use and development in areas of coastal hazard risk

In areas potentially affected by coastal hazards over at least the next 100 years:

- (a) avoid increasing the risk of social, environmental and economic harm from coastal hazards;
- (b) avoid redevelopment, or change in land use, that would increase the risk of adverse effects from coastal hazards;
- (c) encourage redevelopment, or change in land use, where that would reduce the risk of adverse effects from coastal hazards...

²⁸ Statement of evidence of Graeme Silver dated 12 July 2019, at [32].

...

47. DOC guidance on Policy 25(a) says:²⁹

This clause directs decision-makers to avoid increasing the risk of harm from coastal hazards. This policy is written in a directive way, with the meaning of 'avoid' having been informed by court decisions since the gazettal of the NZCPS 2010, including the Supreme Court's decision in *Environmental Defence Society Incorporated v The New Zealand King Salmon Company Limited*.

48. Policy 27 also directs that in areas of significant existing development and sets out a range of strategies for "reducing coastal hazard risk".
49. In my submission, the phrase "to unacceptable levels" must be removed in order to give effect to NZCPS Policies 25 and 27.

BIOFOULING

50. The Minister's submission sought that the rules pertaining to biofouling are amended to align with NZCPS Policy 12, and to be consistent with the "Anti-fouling and in-water cleaning guidelines (June 2013)."³⁰
51. Evidence called by the Minister and the s42A report recommendations are mostly aligned except for some fine tuning recommended by Ms Hucker in her evidence. I make brief comment on one of those matters here.
52. The Minister of Conservation (and the Ministry for Primary Industries) sought the following standard be included in rule 9 of the Proposed Plan:

If any person undertaking or responsible for the cleaning, suspects that harmful or unusual aquatic species (including species designated as unwanted organisms or pest species under the Biosecurity Act 1993) are present on the ship, structure or navigational aid, that person shall take the following steps:

- (i) Any cleaning activities commenced shall cease immediately, and
- (ii) the Taranaki Regional Council and the Ministry for Primary Industries shall be notified without unreasonable delay, and
- (iii) the cleaning may not recommence until notified by the Council to do so, or in the event a designated unwanted

²⁹ NZCPS 2010 guidance note: Coastal Hazards, December 2017, Department of Conservation, page 44.

³⁰ Attached as Appendix 2 to the Statement of evidence of Sarah Hucker on behalf of the Minister of Conservation.

organism or pest species is found, notified to do so by the Ministry for Primary Industries.

53. The s 42A report has not recommended including the whole standard noting that it is legally uncertain as it refers to “suspects”. The s 42A report instead recommends converting this condition into the following standard:

the activity does not involve any species designated as unwanted organisms or pest species under the Biosecurity Act 1993.

54. The remaining steps set out the Minister’s submissions are placed in a footnote as guidance as opposed to a legal requirement.
55. In my submission, the condition read as a whole, as sought in the Minister’s submission, does provide legal certainty. It essentially provides that the cleaning of biofouling is a permitted activity provided that, after undertaking the steps in clause (i)-(iii), the Council or Ministry for Primary Industries confirms that there are no harmful or unusual aquatic species.³¹ I acknowledge that whether the steps in clauses (i)-(iii) are followed depends on the judgement of the person undertaking the activity, however this judgement still comes into play with the recommended drafting which requires that “the activity does not involve any species designated as unwanted organisms or pest species under the Biosecurity Act 1993”, as this still requires the steps to be followed once an organism is “suspected”. It places a responsibility on the owner of the ship, moveable object or navigation aid to check whether there are any unusual or harmful aquatic species. The Environment Court in *Waimakariri District Council v North Canterbury Clay Target Association* confirmed that the fact a rule calls for judgement does not necessarily make it ultra vires (i.e. outside the scope of the RMA), the question is whether undue subjective discretion is conferred.³²
56. I submit that it is not unusual for permitted activity standards to include this level of responsibility on a person wishing to undertake an activity, and that the

³¹ Under s 122(1)(c) of the Biosecurity Act 1993, an inspector or authorised person under the Biosecurity Act may direct the owner or person in charge of any organism or risk goods to take steps to prevent the spread of any pest or unwanted organism.

³² *Waimakariri District Council v North Canterbury Clay Target Association* [2014] NZEnvC 114 at [23].

Minister submission on condition (c) as supported in Ms Hucker's evidence is accepted.

OTHER REMAINING MATTERS

Rule 12A – seismic surveying (controlled activity)

57. The Minister supported Rule 12 of the notified version Proposed Plan but welcomes and supports the s42A report's recommendation to recast seismic surveying as a controlled activity (now Rule 12A).
58. NZCPS Policy 11 requires that adverse effects of activities on indigenous taxa that are listed as threatened or at risk are avoided. As noted in Dr Lundquist's evidence, Hector's dolphin, Māui dolphin and bottlenose dolphin are listed as threatened under the New Zealand Threat Classification System list.³³ NZCPS Policy 11(a) is therefore triggered. Whilst compliance with the "Code of Conduct for minimising acoustic disturbance to marine mammals" (the seismic Code) is a condition of Rule 12A, reference to the Code in itself does not suffice to ensure adverse effects on these threatened species will be avoided. Dr Lundquist's evidence is that there are some situations in which the seismic Code is unable to minimise risks to marine mammals, for example because the seismic Code was not designed to minimise certain risks such as behavioural disturbance far away from the survey. Dr Lundquist notes that "there are limited options to manage the risks associated with behavioural disturbance of marine mammals under the Code".³⁴ This provides support for controlled activity status, as Council has the ability to impose additional conditions if appropriate to avoid adverse effects on marine mammals. As stated in Mr Silver's evidence:

the recommendation for a controlled activity status is supported as Council will be able to control the method, timing, location, and impacts to protect indigenous biodiversity from adverse effects through conditions of consent.

59. As acknowledged in Mr Lundquist's evidence the seismic Code does not address effects on marine species that are not mammals. Mr Silver notes that permitted activity status for seismic surveying is inappropriate as the potential impacts on

³³ Statement of evidence of David Jeffrey Lundquist dated 12 July 2019, at [9] and Appendix A.

³⁴ Statement of evidence of David Jeffrey Lundquist dated 12 July 2019, at [34]-[35].

seismic surveying activities on non-marine mammals would be inadequately managed through a permitted activity rule.³⁵

60. Accordingly, controlled activity status under the RMA is appropriate to ensure adverse effects can be avoided as required by policy 11 of the NZCPS in relation to threatened marine mammals and to manage potential impacts on other marine species that are not managed by the Code.

Rule 21 – navigation aids (permitted activity)

61. The Minister’s submission sought Rule 21 be a permitted activity exclusively for Council, Port Taranaki, Maritime New Zealand, or the agents of these organisations, and overlooked reference to the Department of Conservation.
62. Mr Lilley’s evidence provides evidence on the Department’s responsibilities under the Marine Reserves Act 1971 with respect to marking the boundaries of marine reserves.³⁶ Mr Lilley’s evidence acknowledges that the preservation of a marine reserve depends on the strict observation by the public with respect to where the boundaries of the marine reserve applies.
63. One point of clarification is that Mr Silver’s evidence recommends that the “Department of Conservation” is listed under clause (aa). As the statutory function of marking the boundaries of marine reserves rests with the Director-General, I submit that it would be appropriate to list the “Director-General of Conservation” under new clause (aa).
64. The requirement to obtain a resource consent could cause unnecessary delays in the instalment of navigation aids, which would compromise the ability to ensure public awareness of “no-take” zones and therefore compromise protection of indigenous biodiversity provided for under the Marine Reserves Act.
65. I submit that including the Director-General of Conservation under rule 21 is consistent with the direction of the NZCPS Policy 5 which requires consideration of effects on land and waters on the coastal environment held or

³⁵ Statement of evidence of Graeme Silver dated 12 July 2019, at [110].

³⁶ Statement of evidence of Callum David Lilley dated 12 July 2019, at [21]-[29].

managed under the Conservation Act 1987 and any Act listed in Schedule 1 to that Act, which includes the Marine Reserves Act 1971.

66. Given the statutory roles and responsibilities the Director-General of Conservation has in relation to marine reserves it can be anticipated that the Director-General would be listed alongside Taranaki Regional Council, Port Taranaki, and Maritime New Zealand.
67. It is my submission that the Panel has scope to amend the rule to include the Director-General Conservation within clause standard (aa) of Rule 21.
68. It is my submission that in fact scope is provided in the submissions by those parties seeking higher activity status for the rule.³⁷ The notified version of the proposed plan provides for navigation aids as a permitted activity regardless of who undertakes it. I submit that the inclusion of Director-General of Conservation alongside the list of agencies permitted to undertake the instalment of navigation aids is a matter that sits between the notified version of Rule 21 and relief sought in those parties' submissions.

Rule 35 – maintenance repair of existing lawfully established structures (permitted activity), Rule 38 – structure removal and replacement (permitted activity), Rule 44 – structure removal or demolition (permitted activity)

69. The s 42A report recommends declining the Minister's submission to include new conditions to rules 35, 38 and 44 addressing:
 - a. How the use of vehicles and machinery in the coastal environment will be avoided where possible, and minimised/effects mitigated where necessary (including taking the shortest and least sensitive route).
 - b. The requirement for construction equipment including spoil, litter or equipment to be removed within 24 hours of completion of any works.
 - c. The prohibition of refuelling or fuel storage occur within the coastal environment and that methods should be employed to avoid any fuel spillage.

³⁷ For example, Te Korowai o Ngāruahine Trust, and Ngati Rahiri Hapū.

70. Mr Neale’s evidence describes the adverse effects which vehicles in the coastal environment can cause, including compaction, crushing, vegetation destruction, weed and pest incursion, and noise, which are more pronounced in sensitive environments like mudflats and shellfish/crab beds.³⁸
71. Mr Silver recommends amendments to Rules 35 and 44 by way of additional standards which will require any disturbance to the foreshore or seabed is restored to its previous state where practicable and that steps are taken to avoid storing fuel in the coastal marine area, and to minimise the extent of any debris entering the coastal marine area.
72. In my submission, the amendments provided by Mr Silver are required to implement the NZCPS Policy 11 relating to effects on indigenous biodiversity. Mr Silver’s amendments also implement NZCPS Policy 20(1) which requires controls on vehicle use on the foreshore and seabed where certain effects, such as harm to ecological systems or to indigenous flora and fauna, might occur.

New Method 6.4 – dog control

73. Mr Lilley’s evidence describes the threats dogs impose on indigenous species, including the blue penguin and New Zealand fur seals.
74. The s42A report recommends amending method 14 to state “*advocate when appropriate, to relevant agencies, to protect significant indigenous biodiversity.*” However, it is my submission that this suggested amendment is too broad and does not explicitly highlight the issue of dog control. The new method sought by the Minister signals the importance of the matter to district councils. This is particularly critical in light of continuing decline in species, habitats and ecosystems in the coastal environment which are already under pressure from a range of anthropogenic activities (i.e. subdivision and use) – pressure compounded by the threat’s dogs pose as described in Mr Lilley’s evidence.

CONCLUSION

75. The Minister’s primary concerns are to ensure the Proposed Plan:

³⁸ Statement of evidence of Donald Malcolm Neale dated 12 July 2019, at [33].

- a. meets RMA requirements and gives effect to the NZCPS; and
- b. enables the Department's functionaries to properly undertake their statutory functions.

76. The evidence of Mr Silver, read alongside the evidence of the other witnesses called by the Minister, demonstrate why further amendments to the Proposed Plan are required. In my submission, adoption of Mr Silver's changes will ensure that the Proposed Plan achieves the requirements traversed in these submissions.

77. I would like to thank the Panel for the opportunity to be heard, and the reporting officers from the Council for their contributions to this process.

DATED this 16th day of July 2019

May Downing

Solicitor for the Minister of Conservation

Appendix One: relevant NZCPS provisions

Policy 5 Land or waters managed or held under other Acts

- (1) Consider effects on land or waters in the coastal environment held or managed under:
 - (a) the Conservation Act 1987 and any Act listed in the 1st Schedule to that Act; or
 - (b) other Acts for conservation or protection purposes;and, having regard to the purposes for which the land or waters are held or managed:
 - (c) avoid adverse effects of activities that are significant in relation to those purposes; and
 - (d) otherwise avoid, remedy or mitigate adverse effects of activities in relation to those purposes.
- (2) Have regard to publicly notified proposals for statutory protection of land or waters in the coastal environment and the adverse effects of activities on the purposes of that proposed statutory protection.

Policy 11 Indigenous biological diversity (biodiversity)

To protect indigenous biological diversity in the coastal environment:

- (a) avoid adverse effects of activities on:
 - (i) indigenous taxa⁴ that are listed as threatened⁵ or at risk in the New Zealand Threat Classification System lists;
 - (ii) taxa that are listed by the International Union for Conservation of Nature and Natural Resources as threatened;
 - (iii) indigenous ecosystems and vegetation types that are threatened in the coastal environment, or are naturally rare⁶;
 - (iv) habitats of indigenous species where the species are at the limit of their natural range, or are naturally rare;
 - (v) areas containing nationally significant examples of indigenous community types; and
 - (vi) areas set aside for full or partial protection of indigenous biological diversity under other legislation; and
- (b) avoid significant adverse effects and avoid, remedy or mitigate other adverse effects of activities on:
 - (i) areas of predominantly indigenous vegetation in the coastal environment;
 - (ii) habitats in the coastal environment that are important during the vulnerable life stages of indigenous species;
 - (iii) indigenous ecosystems and habitats that are only found in the coastal environment and are particularly vulnerable to modification, including estuaries, lagoons, coastal wetlands, dunelands, intertidal zones, rocky reef systems, eelgrass and saltmarsh;
 - (iv) habitats of indigenous species in the coastal environment that are important for recreational, commercial, traditional or cultural purposes;
 - (v) habitats, including areas and routes, important to migratory species; and
 - (vi) ecological corridors, and areas important for linking or maintaining biological values identified under this policy.

⁴ Taxa as defined in the Glossary.

⁵ Examples of taxa listed as threatened are Maui's dolphin, Hector's dolphin, New Zealand fairy tern, Southern New Zealand dotterel.

⁶ Naturally rare, as defined in the Glossary.

Policy 12 Harmful aquatic organisms

- (1) Provide in regional policy statements and in plans, as far as practicable, for the control of activities in or near the coastal marine area that could have adverse effects on the coastal environment by causing harmful aquatic organisms⁷ to be released or otherwise spread, and include conditions in resource consents, where relevant, to assist with managing the risk of such effects occurring.
- (2) Recognise that activities relevant to (1) include:
 - (a) the introduction of structures likely to be contaminated with harmful aquatic organisms;
 - (b) the discharge or disposal of organic material from dredging, or from vessels and structures, whether during maintenance, cleaning or otherwise; and whether in the coastal marine area or on land;
 - (c) the provision and ongoing maintenance of moorings, marina berths, jetties and wharves; and
 - (d) the establishment and relocation of equipment and stock required for or associated with aquaculture.

Policy 13 Preservation of natural character

- (1) To preserve the natural character of the coastal environment and to protect it from inappropriate subdivision, use, and development:
 - (a) avoid adverse effects of activities on natural character in areas of the coastal environment with outstanding natural character; and
 - (b) avoid significant adverse effects and avoid, remedy or mitigate other adverse effects of activities on natural character in all other areas of the coastal environment;including by:
 - (c) assessing the natural character of the coastal environment of the region or district, by mapping or otherwise identifying at least areas of high natural character; and
 - (d) ensuring that regional policy statements, and plans, identify areas where preserving natural character requires objectives, policies and rules, and include those provisions.
- (2) Recognise that natural character is not the same as natural features and landscapes or amenity values and may include matters such as:
 - (a) natural elements, processes and patterns;
 - (b) biophysical, ecological, geological and geomorphological aspects;
 - (c) natural landforms such as headlands, peninsulas, cliffs, dunes, wetlands, reefs, freshwater springs and surf breaks;
 - (d) the natural movement of water and sediment;
 - (e) the natural darkness of the night sky;
 - (f) places or areas that are wild or scenic;
 - (g) a range of natural character from pristine to modified; and
 - (h) experiential attributes, including the sounds and smell of the sea; and their context or setting.

⁷ Harmful aquatic organisms as defined in the Glossary.

Policy 15 Natural features and natural landscapes

To protect the natural features and natural landscapes (including seascapes) of the coastal environment from inappropriate subdivision, use, and development:

- (a) avoid adverse effects of activities on outstanding natural features and outstanding natural landscapes in the coastal environment; and
- (b) avoid significant adverse effects and avoid, remedy, or mitigate other adverse effects of activities on other natural features and natural landscapes in the coastal environment;

including by:

- (c) identifying and assessing the natural features and natural landscapes of the coastal environment of the region or district, at minimum by land typing, soil characterisation and landscape characterisation and having regard to:
 - (i) natural science factors, including geological, topographical, ecological and dynamic components;
 - (ii) the presence of water including in seas, lakes, rivers and streams;
 - (iii) legibility or expressiveness—how obviously the feature or landscape demonstrates its formative processes;
 - (iv) aesthetic values including memorability and naturalness;
 - (v) vegetation (native and exotic);
 - (vi) transient values, including presence of wildlife or other values at certain times of the day or year;
 - (vii) whether the values are shared and recognised;
 - (viii) cultural and spiritual values for tangata whenua, identified by working, as far as practicable, in accordance with tikanga Māori; including their expression as cultural landscapes and features;
 - (ix) historical and heritage associations; and
 - (x) wild or scenic values;
- (d) ensuring that regional policy statements, and plans, map or otherwise identify areas where the protection of natural features and natural landscapes requires objectives, policies and rules; and
- (e) including the objectives, policies and rules required by (d) in plans.

Policy 20 Vehicle access

- (1) Control use of vehicles, apart from emergency vehicles, on beaches, foreshore, seabed and adjacent public land where:
 - (a) damage to dune or other geological systems and processes; or
 - (b) harm to ecological systems or to indigenous flora and fauna, for example marine mammal and bird habitats or breeding areas and shellfish beds; or
 - (c) danger to other beach users; or
 - (d) disturbance of the peaceful enjoyment of the beach environment; or
 - (e) damage to historic heritage; or
 - (f) damage to the habitats of fisheries resources of significance to customary, commercial or recreational users; or
 - (g) damage to sites of significance to tangata whenua;might result.
- (2) Identify the locations where vehicular access is required for boat launching, or as the only practicable means of access to private property or public facilities, or for the operation of existing commercial activities, and make appropriate provision for such access.
- (3) Identify any areas where and times when recreational vehicular use on beaches, foreshore and seabed may be permitted, with or without restriction as to type of vehicle, without a likelihood of any of (1)(a) to (g) occurring.

Policy 25 Subdivision, use, and development in areas of coastal hazard risk

In areas potentially affected by coastal hazards over at least the next 100 years:

- (a) avoid increasing the risk²⁰ of social, environmental and economic harm from coastal hazards;
- (b) avoid redevelopment, or change in land use, that would increase the risk of adverse effects from coastal hazards;
- (c) encourage redevelopment, or change in land use, where that would reduce the risk of adverse effects from coastal hazards, including managed retreat by relocation or removal of existing structures or their abandonment in extreme circumstances, and designing for relocatability or recoverability from hazard events;
- (d) encourage the location of infrastructure away from areas of hazard risk where practicable;
- (e) discourage hard protection structures and promote the use of alternatives to them, including natural defences; and
- (f) consider the potential effects of tsunamis and how to avoid or mitigate them.

Policy 27 Strategies for protecting significant existing development from coastal hazard risk

- (1) In areas of significant existing development likely to be affected by coastal hazards, the range of options for reducing coastal hazard risk that should be assessed includes:
 - (a) promoting and identifying long term sustainable risk reduction approaches including the relocation or removal of existing development or structures at risk;
 - (b) identifying the consequences of potential strategic options relative to the option of 'do-nothing';
 - (c) recognising that hard protection structures may be the only practical means to protect existing infrastructure of national or regional importance, to sustain the potential of built physical resources to meet the reasonably foreseeable needs of future generations;
 - (d) recognising and considering the environmental and social costs of permitting hard protection structures to protect private property; and
 - (e) identifying and planning for transition mechanisms and timeframes for moving to more sustainable approaches.
- (2) In evaluating options under (1):
 - (a) focus on approaches to risk management that reduce the need for hard protection structures and similar engineering interventions;

¹⁰ Risk as defined in the Glossary.

- (b) take into account the nature of the coastal hazard risk and how it might change over at least a 100-year timeframe, including the expected effects of climate change; and
 - (c) evaluate the likely costs and benefits of any proposed coastal hazard risk reduction options.
- (3) Where hard protection structures are considered to be necessary, ensure that the form and location of any structures are designed to minimise adverse effects on the coastal environment.
- (4) Hard protection structures, where considered necessary to protect private assets, should not be located on public land if there is no significant public or environmental benefit in doing so.

BEFORE THE TARANAKI REGIONAL COUNCIL

IN THE MATTER

of the Resource Management
Act 1991

AND

IN THE MATTER

of the Proposed Coastal Plan
for Taranaki

**STATEMENT OF EVIDENCE OF GRAEME DOUGLAS SILVER ON BEHALF OF THE
MINISTER OF CONSERVATION
DATED 12 JULY 2019**

Department of Conservation

INTRODUCTION

- 1 My name is Graeme Douglas Silver.
- 2 I am currently employed as a Senior Planner with the Department of Conservation, based in Hamilton, where I have worked since May 2017. Prior to this I worked for the Waikato Regional Council for 15 years and the Gisborne District Council for two years. I held a variety of roles including Senior Policy Advisor and Environmental Planner, Coastal.
- 3 While employed by these councils I worked on a wide range of regional planning topics including water quality classifications, marine farming, coastal structures, moorings and marina management, coastal hazards, identification of significant natural areas, and implementation of the New Zealand Coastal Policy Statement (NZCPS).
- 4 I was a technical officer on the Hauraki Gulf Forum, represented regional councils on the Aquaculture Implementation Team from 2005 to 2008 and was a member of the Stakeholder Reference Group working on the National Environmental Standard for Aquaculture from 2015 to 2018.
- 5 I was a member of Local Government New Zealand's Coastal Special Interest Group, from 2001 to 2017 and Convener of the Group from 2015 to 2017.
- 6 I hold a Masters of Science in Geography from the University of Auckland.

CODE OF CONDUCT FOR EXPERT WITNESSES

- 7 I have read and agree to comply with the Code of Conduct for Expert Witnesses in the Environment Court Practice Note 2014. While this is not an Environment Court hearing, I have prepared this evidence in accordance with that code for this hearing. I have not omitted to consider material facts known to me that might alter or detract from the opinions expressed. I confirm that the issues addressed in this

brief of evidence are within my area of expertise. I have specified where my opinion is based on limited or partial information and identified any assumptions I have made in forming my opinions. I have also identified where I have relied on the expertise of others.

SCOPE OF EVIDENCE

8 I have been asked by the Minister of Conservation (Minister) to prepare evidence in relation to the submission and further submission on the Proposed Coastal Plan for Taranaki (proposed plan). Any references to the proposed plan in my brief of evidence relate to the plan as originally notified (24 February 2018).

9 In preparing my evidence I have read:

- a. The Section 32 Evaluation report;
- b. The submissions and further submissions on the proposed plan made by the Minister of Conservation;
- c. The s42A officer report for the proposed plan entitled 'Section 42A Report Proposed Coastal Plan for Taranaki'. I refer to this as the s42A officer's report or the officer's report in my evidence;
- d. The evidence of Callum Lilley in relation to the burial of marine mammals, marine reserve markers, project reef, and the impacts of dogs on wildlife;
- e. The evidence of Don Neale in relation to marine ecology;
- f. The evidence of Dave Lundquist in relation to seismic surveying and marine mammals;
- g. The evidence of Sarah Hucker in relation to marine biosecurity.

COASTAL OCCUPATION CHARGES

- 10 The Minister submitted that the Plan must include a statement regarding coastal occupation charges.
- 11 Section 64A of the RMA requires that a council consider whether or not to include a coastal occupation charging regime in the regional coastal plan and include a statement to that effect in the Plan.
- 12 That consideration must have regard to the extent to which public benefits from the coastal marine area will be lost or gained, and the extent to which private benefit is obtained by the occupation.
- 13 The proposed Plan was silent on the matter of coastal occupation charges. The s42A officer's report accepts the submission and recommends the inclusion of a simple note in Chapter 9 Financial Contributions stating:
- The Council is not operating a charging regime for occupation of the coastal marine area.*
- 14 This goes some way to satisfying the requirements of section 64A but it lacks clarity regarding the Council's decision on the issue (if there has been one) and Council's intentions.
- 15 Unless the decision has been delegated to council officers, a resolution will have to be passed by the Council to make the decision required by section 64A. That decision must be based on an assessment that has regard to the public and private benefits. Once these steps are complete, a statement can be included in the Plan.
- 16 It is not clear if such a resolution has been passed. The wording proposed by the s42A report does not indicate if this has occurred and the section 32 report is silent on this matter.
- 17 I recommend that Council include a new sub-section in Section 3.1, after the subsection on coastal hazards. Prior to including this statement in the next version of the proposed Plan, if Council has not already done so, it will need to pass a resolution that it will or will not

impose coastal occupation charges. This suggested wording assumes that they will not:

Coastal occupation charges

The Council has the power to impose charges for the private occupation of public space in the coastal marine area. Any revenue gathered must be spent on the sustainable management of the coastal marine area.

The Council has decided not to include a charging regime in the regional coastal plan at this time. However, this may occur in the future if considered appropriate following an investigation under Method 6.1.8.

18 And include a new method 6.1.8:

Investigate the application of coastal occupation charges in the Taranaki region, with the view to including such charges in this Plan in the future, if appropriate and feasible.

OBJECTIVES

Objective 3 – reverse sensitivity

19 Z Energy Ltd, BP Oil Ltd and Mobil Oil NZ Ltd lodged a submission seeking an amendment to the wording of Objective 3 to provide for maintenance and upgrading of infrastructure within the provision.

20 The Minister further submitted on this seeking that the submission be declined. I agree and consider that this amendment is inappropriate. Upgrading of major infrastructure can greatly alter the scale and intensity of an activity. This would introduce considerable uncertainty regarding potential reverse sensitivity effects.

21 The s42A report recommends that the submission is declined as the relief is unnecessary and potentially confusing. I support the Council recommendation to decline the submission.

Objective 5 – coastal water quality

22. The Minister submitted on Objective 5 seeking amendments so that the objective provides for the maintenance of good water quality, and the restoration of degraded water quality where practicable. Fonterra also submitted on this objective seeking an amendment to clarify when coastal water quality must be maintained, and when it must be restored.

23. The s42A report has recommended that Objective 5 be amended to read as follows:

“Water quality in the coastal environment is maintained where it is good and enhanced where it is degraded”.

24. I consider this recommendation is appropriate as it logically sets out the appropriate conditions for enhancement or maintenance of water quality and is more consistent with Policy 21 of the NZCPS. I support the amended version of Objective 5 as recommended in the s42A report.

Objective 6 – natural character

25. The Minister of Conservation requested that the objective be retained as notified.

26. The s42A Report recommends changes to Objective 6 to read:

“The natural character of the coastal environment is preserved and protected from inappropriate subdivision, use and development and is ~~restored~~ enhanced where ~~appropriate~~ degraded”.

27. I support the inclusion of ‘subdivision’ and ‘degraded’ in the recommended wording, however I consider that the original wording of ‘restored’ is more appropriate rather than “enhanced”. “Restored” is consistent with Policy 14 of the NZCPS which concerns the restoration of natural character.

Objective 8 – indigenous biodiversity

28. The Minister of Conservation lodged a submission in relation to Objective 8. The Minister, along with a number of other submitters,

requested that Council map and identify areas of significant indigenous biodiversity in the schedules and maps.

- 29 The s42A report recommends retaining Objective 8 as originally notified. I support this recommendation and I discuss the mapping of significant indigenous biodiversity under the Schedule 1, 4A, 4B matters later in my evidence.

Objective 13 – coastal hazard risk and public health and safety

- 30 The Minister of Conservation opposed a submission by Z Energy Ltd, BP Oil Ltd and Mobil Oil Ltd requested that Objective 13 be amended to read:

“The risk of social, cultural, environmental, and economic harm from coastal hazards is not increased to unacceptable levels...”

- 31 The s42A report recommends accepting this amendment as it allows minor or acceptable risks to occur, while protecting the region from coastal hazards and rewords the objective so that the risk from coastal hazards is not increased “beyond acceptable levels”.

- 32 I consider that this amendment is inappropriate. An objective should identify the resource management outcome desired. In this case it is the reduction of risk from coastal hazards. The recommended amendment provides for instances where risks can be increased.

- 33 This approach is contrary to the NZCPS Policy 25(a) which requires councils to, over a 100 year timeframe:

“avoid increasing the risk of social, environmental and economic harm from coastal hazards;”

- 34 Where there is good reason to build a structure in a location subject to coastal hazard, then it must be constructed in such a way that it does not increase the existing risk of coastal hazards. This could be achieved through design, location selection and enhancing natural defences such as sand dunes.

- 35 I note that in his evidence, Mr Neale, shows that the degree of risk from coastal hazards is increasing, and climate change is likely to

exacerbate this further. I recommend that Objective 13 is retained as notified and that the recommended amendments are declined.

POLICIES

Policy 1 – coastal management areas

36 The Minister of Conservation submitted on Policy 1 seeking an amendment to include a new characteristic for the open coast management area as follows:

“...provide important habitat for marine species”

37 The s42A report recommends granting the relief in kind by amending the scope of Policy 1(d)(ii) to *“refer to marine systems, which encompasses, amongst other things, reef systems that provide habitats for marine life”*¹. The recommended amendments to the policy now reads:

“include marine reef systems that provide habitat to marine life, and are valued by Maori for their mahinga kai”

38 I consider this amendment partially addresses the Minister of Conservation’s relief. I agree that “marine systems” is a broader term than “reef systems” and support this terminology. However Policy 1 (d)(ii) also includes ‘AND are valued by Māori for mahinga kai’. I am concerned that the word ‘and’ acts as a qualifier which creates uncertainty around when the characteristic applies. If a marine system provides important habitat for marine life, but is not valued by Māori, then it would not be recognised as a distinguishing characteristic the way the policy is currently written. Inversely, if something is valued by Maori but doesn’t provide habitat to marine life, it would also not be recognised as a characteristic of the open coast.

39 The NZCPS deals with mahinga kai and cultural associations in Objective 2, and Policy 3. It deals with biodiversity in separate objectives and policies. The s42A report does not provide any

¹ Section 42A report on Decisions Requested, Proposed Coastal Plan for Taranaki. 11 June 2019 69/73

justification for the two policies being intertwined. I therefore recommend that mahinga kai and marine systems should be separated from one other, and that marine systems should be dealt with separately in its own sub-policy (d)(v), as recommended by the Minister of Conservation.

Policy 2 – integrated management

40 The Minister of Conservation, and several other parties submitted in opposition of this policy on the basis that clause (c) was unclear and sought clarification.

41 The s42A report has clarified the intention of the policy, but recommends in response to the submissions that Policy 2 be amended to clarify the concept of cross-media effects by deleting clause (c) and inserting a new clause (aa) that reads:

“recognising ki tai ki uta by taking into account the interconnected nature of resources and natural processes in the management of adverse effects across air, land, freshwater bodies and the coastal environment.”

42 In my view this new clause more clearly articulates what is required in terms of integrated management. I support the s42A recommendation to include clause (aa).

Policy 4 – extent and characteristics of the coastal environment

43 The Minister of Conservation requested that the landward extent of the coastal environment be identified and mapped. Without knowing where the coastal environment lies, it is difficult for users of the plan to know whether the objectives and policies apply to their activity.

44 The s42A report recommends including an indicative landward extent of the coastal environment that is aligned with the district councils' identified coastal environment. New Plymouth District has identified a “Coastal Environment Area” in its District Plan. South Taranaki District Council has identified a “Coastal Protection Area (Inland Boundary) in its proposed District Plan.

45. The s42A report also recommends that TRC retains the ability to consider the extent of the coastal environment on a case-by-case basis through the consenting process
46. I support the coastal environment line being consistent with the New Plymouth District Council and South Taranaki District Council coastal environment lines, and the inclusion of the line in the Plan. A coastal environment line shown on the planning maps will create clarity for most plan users. In cases of major consent applications close to the line a case-by-case assessment may still be appropriate. This consistency maintains an integrated approach between the regional council and the territorial authorities that manage parts of the coast, in line with Policy 4 of the NZCPS.
47. In his evidence, Mr Donald Neale also supports the identification of the coastal line and the ability to consider it on a case-by-case basis.
48. On a related issue I note that this Plan is a regional coastal environment plan but is not labelled as such. This has the potential to create some confusion as it is only in section 1.4.1 that the Plan states that it applies to the coastal environment with some further discussion in section 1.4.2. Many Plan users will skip the introductory sections and go straight to the policy and rule sections. For these reasons, I recommend that the title of the Plan be changed to “Coastal Environment Plan for Taranaki”.

Policy 5 – Appropriate use and development of the coastal environment

Trans-Tasman Resources Submission

49. Trans-Tasman Resources Ltd submitted seeking that Policy 5 (b) is amended to include the contributions of petroleum and mineral resources as matters which must be regarded when determining the appropriateness of an activity in the plan. The Minister opposed this submission.
50. The s42A report recommends granting Trans-Tasman’s relief and amended Policy 5(b) as follows:

The benefits to be derived from ~~the~~ other activities at a local, regional, and national level including the existing and potential

contribution of petroleum and mineral resources, and the potential contribution of aquaculture, and renewable energy sources...”

51 I disagree with the officer’s recommendation. The amendment goes beyond the NZCPS, which seeks to encourage low impact and renewable resource as a national policy directive. The amendment elevates the petroleum and mineral resources above these activities by recognising existing as well as future contributions. It is therefore in conflict with the NZCPS.

52 Furthermore, the benefits of mineral and petroleum activities are not excluded from consideration by the original wording of the policy. They can additionally be considered under Policy 6 where they are part of, or contribute to, regionally significant infrastructure. This includes, among other things, facilities and pipelines for the supply or distribution of minerals and their derivatives.

New Clause (aa)

53 The s42A report recommends including a new clause under Policy 5:

“whether the activity relates to the use, operation, maintenance and alteration of regionally important infrastructure”

54 It is unclear from what submission this recommended amendment originates. The track changes version of the plan indicates that the amendment is a result of a submission by Transpower (submitter 26), but new clause (aa) is not identified in the relief sought in Transpower’s submission.

55 Notwithstanding the unclear origin of new clause (aa), I consider that it is not appropriate to include in Policy 5 as Policy 6 already explicitly provides for the recognition of regionally important infrastructure. I recommend that new clause (aa) should not be accepted.

New policy 5A

56 Forest and Bird are seeking amendments to the plan by including a new policy that identifies appropriate locations for aquaculture, and until appropriate places are identified, excluding aquaculture from

- outstanding value areas, estuaries modified, and estuaries unmodified.
57. The s42A report recommends declining this relief on the basis that it is not appropriate or necessary to identify these locations as Taranaki is not currently conducive to aquaculture activities.
58. Policy 8 of the NZCPS requires that a regional coastal plan must provide for aquaculture activities in appropriate places in the coastal environment. Whether aquaculture activities currently occur in the region is irrelevant and does not provide an exemption from this requirement. Currently the policy framework does not determine where aquaculture is appropriate, and Policy 5 (b) of the plan does not determine locations where it is appropriate and is inconsistent with Policy 8 of the NZCPS.
59. The RPS requires Council to consider the need to make provision for the need for aquaculture management areas.² There may be no demand for aquaculture presently, but the industry is innovative and future technologies may enable aquaculture in areas which are presently “not conducive” to those activities. Any future demand for aquaculture should be planned for, to avoid effects on outstanding natural character, outstanding natural features and landscapes, indigenous biodiversity. As stated in the evidence of Mr Neale, this approach is better as it directs aquaculture activities away from sensitive areas.
60. I recommend that new Policy 5A as proposed by Forest and Bird or similar be accepted and included in the plan.

Policy 8 and 9 – natural character and natural features and landscapes

61. The Minister of Conservation requested changes to Policy 9.
62. The s42A report recommends amending Policy 9 to read:

² Regional Policy Statement for Taranaki 2010, CNC METH 3, Page 72

- *Protect ~~all other areas of~~ the natural character, features and landscapes of the coastal environment not addressed in Policy 8 by:...*

R3 Policy 8 is also amended to read:

- *Protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value identified in Schedule 4 2 from inappropriate subdivision, use and development by:*

(a) avoiding adverse effects of activities on the values and characteristics including those identified in Schedule 2 that contribute to areas:...

R4 I support this amendment. The proposed wording means that Policy 8 and Policy 9 follow a hierarchy of avoid 'adverse' effects on areas with outstanding value and avoid 'significant adverse' effects for any other areas that haven't been identified as outstanding (policy 9). This is in line with NZCPS Policy 13(1)(a) and 13(1)(b) regarding natural character, and Policy 15(a) and 15(b) regarding natural landscapes.

R5 Furthermore, the inclusion of 'including those' in the Policy 8(a) wording recognises that the values identified the Outstanding areas in Schedule 2 may not necessarily be a complete list.

R6 Royal Forest and Bird submitted seeking deletion of Policy 9. I do not support this request.

New policy 9A

R7 New policy(s) 9A was proposed by the Royal Forest and Bird Protection Society in its submission. They requested a policy (or policies) that would identify further areas of high and outstanding natural character, features and landscapes, and protect them.

R8 The Plan includes a schedule of areas of outstanding areas but does not include the criteria for identifying them. Therefore the plan currently does not provide for the identification of outstanding natural character and outstanding natural features and landscapes beyond those identified in the 2015 study.

Identification of high and outstanding areas

- 69 Identification of natural character and landscapes are an important part of implementing Policy 13 and 15. There are challenges in undertaking these studies, and as a result there may be gaps and changing baselines. In particular natural character values may change over time – an area of high natural character may be later deemed to be outstanding, and vice versa, or an area not identified for high or outstanding natural character may later be considered to have that quality.
- 70 The Regional Policy Statement has a policy of matters to be considered for determining natural character. However, this list is based on the 1994 NZCPS and includes matters that are no longer considered in the 2010 NZCPS for natural character, such as historic heritage.
- 71 I understand that the areas of outstanding natural character and outstanding natural features and landscapes included in Schedule 2 were identified by the *Regional landscape study of the Taranaki coastal environment (2015)*. This study outlines the statutory considerations for identifying natural character and landscapes, including Policy 13 and 15. For natural character identification, the study has a table of 'criteria for assessing the degree of natural character' which includes abiotic, biotic, perceptual and experiential elements of natural character. For natural landscape identification, the study has a table for 'criteria for assessing the significance of natural features and landscapes'.
- 72 I recommend a policy that identifies a list of matters, or criteria for identifying natural character and natural features and landscape can recognise these gaps and allow for further investigation where it may be necessary and on a case-by-case basis. I support the *Regional landscape study of the Taranaki coastal environment (2015)* as appropriate method for identifying natural character and landscapes. A policy for identification could include reference to this study.

Policy for high natural character

- 73 The plan currently does not identify 'high' natural character; it has only identified areas of outstanding natural character. Policy 13(1)(c) requires the natural character of a region or district to be assessed by 'mapping or otherwise identifying at least areas of high natural character'.
- 74 The *Regional landscape study of the Taranaki coastal environment (2015)* has a draft policy which identifies areas of high natural character and a policy that sets out how the effects on natural character (including high natural character areas and values) are to be managed³. These draft policies were written in the context of the operative Coastal Plan and would not be an appropriate fit in this proposed Coastal Plan.
- 75 As discussed earlier, identification of outstanding and high natural character is a fundamental part of implementing NZCPS Policy 13 and being able to assess adverse effects and significant adverse effects under Policy 8 and 9 respectively.
- 76 I recommend that identification of high natural character is included in a plan policy. I also request that areas of high natural character are identified and mapped in the Plan.

Policy 14 – indigenous biodiversity

Removing 'areas' from the policy wording

The Minister requested the amendment of Policy 14 and the mapping and identification of significant indigenous biodiversity.

- 77 The s42A report recommends the following wording:
"Protect ~~areas of~~ significant indigenous biodiversity in the coastal environment and maintain and enhance indigenous biodiversity by [...]"
- 78 I agree with officers' justification that removal of the words 'areas of' better aligns with the definition of 'significant indigenous biodiversity'.

³ *Regional landscape study of the Taranaki coastal environment (2015)* page 38 – draft policy 1.1 and 3.2

Identification of indigenous biodiversity

79 The s42A report states that the Regional Policy Statement BIO Policy 4 provides criteria for the identification of significant indigenous biodiversity. Therefore criteria do not need be repeated in a policy in the Plan. I agree with this statement.

80 I maintain the importance of identifying areas of significant indigenous biodiversity to give effect to section 6(c) of the RMA and Policy 11 of the NZCPS. I discuss the mapping of significant indigenous biodiversity later in my evidence.

Policy 14 interaction with New Policy 6A: Benefits of regionally important infrastructure

81 Policy 14 requires significant indigenous biodiversity to be protected by 'avoiding adverse effects' of activities. Similarly, Policy 8 requires avoiding adverse effects to protect the visual quality and the physical, ecological and cultural integrity of coastal areas of outstanding value. Policy 8 and Policy 14 give effect to NZCPS Policy 13 and 15, and NZCPS Policy 11, respectively.

82 Policy 6A requires the National Grid to 'seek to avoid' adverse effects on areas of outstanding value and significant indigenous biodiversity.

83 The National Policy Statement for Electricity Transmission (NPSET) sets out objectives and policies, including with respect to recognising the national benefits of transmission and to managing the environmental effects of transmission.

84 Policy 8 of the NPSET is particularly relevant in this instance:

- *Policy 8. In rural environments, planning and development of the transmission system should seek to avoid adverse effects on outstanding natural landscapes, areas of high natural character and areas of high recreation value and amenity and existing sensitive activities.*

85 The proposed wording of Policy 6A, 8 and 14 of the Plan all give effect to higher-level national policy statements, being the NPSET and NZCPS. These policies include the policy direction from both national

policy statements without stating whether one has precedence over the other. How directive each relevant policy is, actual and potential effects of the values of concern and the practicality of alternatives would be considerations for each specific proposal.

- 88 In my opinion the 'avoid adverse effects/avoid significant adverse effects' directive from policy 13 and 15 of the NZCPS and the 'seek to avoid adverse effects' directive from the NPSET needs to be reconciled on a case-by-case basis in a resource consent process.

Policy 38 – removal of coastal structures

- 87 New Zealand Petroleum and Minerals submitted seeking that Policy 38 is amended to allow matters such as health and safety concerns, unreasonable costs, or technical constraints to be considered when assessing whether a structure may be abandoned.
- 88 Officers have recommended accepting part of the relief by including clauses (d) and (e), and decline part of the relief, concluding that unreasonable costs are not an appropriate justification for abandoning a structure.
- 89 NZCPS policy 6(2)(e)(ii) directs that unless a structure has heritage, amenity, or reuse value, it must be removed from the coastal marine area. If the removal of a structure is cost-prohibitive, it should not be granted resource consent in the first instance. Avoiding granting consent to structures which cannot be feasibly removed is a more effective and appropriate way to reduce the need for structures to be abandoned in the CMA.
- 90 The occupation and use of the foreshore or seabed can adversely affect public access through the reduction of available public space, and the exclusively occupation of the CMA. Mr Neale's evidence also describes some of the adverse effects which can be caused by structures. Ensuring their removal is important to managing these effects, as well as maintaining and restoring the natural values of the coastal environment.

- 91 I agree with the recommendation by Council to decline the inclusion of “unreasonable cost” as a matter for consideration.

Policy 44 – extraction or deposition of material

- 92 Trans – Tasman Resources Ltd submitted seeking that Policy 44 is amended by deleting clause (f) which requires that where appropriate, deposited material is of a similar size, sorting and parent material to the receiving environments.
- 93 At para 39 of Mr Neale’s evidence he identifies that the deposition of sediment from another, different source can have significant adverse effects.
- 94 The s42A report recommends declining this relief because the requirement is both reasonable and appropriate. I support this recommendation and consider that Policy 44(f) should be retained as notified.

METHODS OF IMPLEMENTATION

New method 6.4 – dog control

- 95 The Minister of Conservation submitted seeking a new method be included as follows:

“Encourage district councils to enforce dog control bylaws to preserve indigenous biodiversity by reducing the risk of dogs killing or injuring native birds, marine mammals and other indigenous species.”

- 96 Officers have recommended partially granting the relief by amending method 14 as follows “*advocate when appropriate, to relevant agencies, to protect significant indigenous biodiversity...*”. And comment that there are disadvantages to confining advocacy to a single issue.

- 97 In my opinion this does not go far enough. The evidence of Mr Lilley identifies the significant impacts of dogs on biodiversity in Taranaki’s coastal environment, particularly on shorebirds, blue penguins, and seals. As Mr Lilley states, DOCs ability to manage this issue is limited

and the occurrence of dog attacks has increased in frequency over time and is likely underestimated.

98 The Regional Policy Statement Policy BIO METH 13 states a method for achieving the intending biodiversity outcomes for the region is to 'advocate to relevant agencies, the use of other legislation... or mechanisms to protect and restore areas of significant indigenous vegetation and habitats of indigenous fauna'. This includes advocating to district councils the use of the Local Government Act 2002 to create and enforce local bylaws. Clearly signalling this in the coastal plan can be used to highlight to the region that specific action is required. Further, it can be difficult for councils to justify expenditure in an annual or long-term plan without clear support from other statutory documents. It is therefore important to signal to Councils through this plan that dog control is a regionally important issue.

99 In response to the comment that confining advocacy to a single issue can be disadvantageous, I agree but similarly a broad-generalised comment as recommended will not clearly signal the necessary change.

100 If other significant biodiversity issues arise that require specific advocacy methods then I recommend that Council consider a plan change to add them.

101 I recommend that Council include a new method as outlined at para 95

REGIONAL RULES

Rule Framework and Schedules 4A and 4B

102 The Minister's submission frequently refers to the need to ensure that the plan to give effect to the NZCPS. It suggests a number of amendments necessary to give effect to the provisions of the NZCPS, including amendments to the rules.

103 NZCPS Policy 11(a)(i) though (vi) lists six sub-sets of indigenous biodiversity in the coastal environment, which must be protected from the adverse effects of activities, by avoiding adverse effects. As

discussed earlier in my evidence, Policy 14 of the plan gives effect to NZCPS Policy 11. It appears that the rule framework intends to give effect to Policy 14 of the plan through matters of discretion and ensuring that permitted and controlled activities do not have adverse effects on species or habitats listed in Schedules 4A or 4B.

104 In giving effect to the NZCPS, Schedules 4A and 4B identify the following:

- Threatened or at-risk species;
- whether the taxa are listed by the International Union for Conservation of Nature and Natural Resources as threatened;
- naturally rare or uncommon ecosystem types; and
- sensitive marine benthic habitats.

105 However, the two schedules **do not** identify:

- Areas containing nationally significant examples of indigenous community types; and
- Habitats of indigenous species where the species are at the limit of their natural range, or are naturally rare;

106 The Minister has not submitted seeking these be included in Schedule 4A or 4B, however in my view the omission of these habitats and areas further highlights the need for more control over permitted and controlled activities, especially in Outstanding Value, and Estuaries Unmodified coastal management areas.

Rule 12 - seismic surveying and bathymetric testing

107 The Minister of Conservation sought that Rule 12 is retained as notified and supported the inclusion of the *Code of Conduct for minimising acoustic disturbance to marine mammals from seismic survey operations* (the Seismic Code). The Minister of Conservation, in her submission, also acknowledged that the Seismic Code is being reviewed, and that there are currently investigations underway into a potential whale sanctuary in the Taranaki region which, if established, may warrant this rule being reconsidered.

- 108 Officers recommend that Rule 12 be split into two rules, a permitted activity for bathymetric testing and an additional rule (Rule 12A) for seismic surveying as a Controlled Activity. This appears to be in response to the large number of submitters that oppose Rule 12 as notified who are concerned that relying on the Seismic Code may result in adverse effects on a wider range of marine species which the code cannot directly manage.
- 109 I consider that the recommended controlled activity status for seismic surveying activities is more appropriate than a permitted rule. In his evidence, Mr Lundquist states that 'the seismic Code was developed specifically to reduce risks to marine mammals' and that in general 'the seismic Code does not consider effects of the activity on species which are not marine mammals and therefore does not manage those effects'.
- 110 In my view, the potential impacts of seismic surveying activities including those on non-marine mammals would be inadequately managed through a permitted activity rule. Council would have no ability to regulate these activities, given the potentially adverse impacts of the activity as referred in Mr Lundquist's evidence, in my view it is important that Council retain this control. The recommendation for a controlled activity status is supported as Council will be able to control the method, timing, location, and impacts to protect indigenous biodiversity from adverse effects through conditions of consent.

Rule 21 – navigation aids

- 111 The Minister of Conservation submitted on this rule seeking that the erection of navigation aids should be a permitted activity exclusively for Council, Port Taranaki, Maritime New Zealand, or the agents of those organisations.
- 112 Officers recommend accepting this submission and granting the Minister of Conservation's relief.
- 113 I agree that permitting any member of the public to erect a maritime navigation aid in the coastal marine area is inappropriate. The installation of lights, buoys, and beacons should be permitted for only

those agencies which have an operational need to erect these structures. Port Taranaki, Taranaki Regional Council, and Maritime NZ all have roles and responsibilities which require owning and maintaining aids to navigation. This includes the safe and efficient operation of maritime facilities, operating the port, and ensuring maritime safety. As the officers note, the placement of maritime navigation aids provides a critical service.⁴

114. As identified in the evidence of Mr Callum Lilley, the Department of Conservation also has roles and responsibilities which require the erection and maintenance of aids to navigation on a regular basis. One of DOC's roles is to administer the Marine Reserves Act 1971 which includes administering marine reserves that fall within Taranaki coastal environment like the Tapuae, and Parininihi marine reserves. DOC also manages the Ngā Motu/Sugar Loaf Islands Marine Protected Area under the Sugar Loaf Islands Marine Protected Area Act 1991. Navigation aids are used to demarcate the boundaries of these protected areas.
115. In my opinion, the placement of navigation aids at these sites is also a critical service for both navigation safety and the protection of biodiversity in the region. I therefore consider that similar to Council, Port Taranaki, and Maritime NZ, DOC has an operational need to frequently erect and maintain navigation aids.
116. I support the officer's recommendation, and consider that a further amendment should be made to include DOC as one of the agencies under Rule 21, new clause (aa) as follows:

"(aa) the activity is undertaken by:

- (i) Taranaki Regional Council or its agents; or
- (ii) Port Taranaki or its agents (within the port); or
- (iii) Maritime New Zealand or its agents; or
- (iv) The Department of Conservation

⁴ Section 42A report on Decisions Requested, Proposed Coastal Plan for Taranaki. 28 June 2019
Page 298

Rule 22 & new rule – network utility structure erection or placement

117. The Minister of Conservation submitted requesting that the reference to the burial of pipelines is removed from the activity description and separated into a new restricted discretionary rule.
118. Officers recommend declining the relief sought. Officers agree that the burial of pipes and cables may have significantly different levels and types of effects compared with attaching them to a bridge or wharf, but consider that the standards and matters of control will allow for the sufficient management of adverse effects.
119. I acknowledge that Council can impose conditions of consent relating to the matters of control, and if the activity does not comply with the standards then it becomes either a discretionary or non-complying activity. I am concerned that there is still no ability for council to decline the activity. As identified in the evidence of Mr Don Neale, the burial of pipelines can have a range of adverse effects, particularly on benthic species. There is no standard in Rule 22 which protects the sensitive marine benthic habitats identified in Schedule 4B of the plan from the impacts of burying a pipeline.
120. NZCPS policy 11(b)(iii) requires avoidance of significant adverse effects on indigenous ecosystems and habitats that are only found in the coastal environment which are particularly vulnerable to modification. Rule 22 at present does not avoid significant impacts of pipelines on the sensitive marine benthic habitats identified in Schedule 4B. Further, for the reasons discussed earlier in my evidence the rule does not address impacts on threatened ecosystem types, or nationally significant examples of community types as directed by NZCPS Policy 11(a). The matter of control relating to location is no guarantee of avoidance of adverse effects on NZCPS 11(a) sites and values or significant adverse effects on NZCPS 11(b)(iii) sites, particularly if the pipeline has a functional need to be located within a particular alignment. I consider that without the discretion to decline such an activity, Council will not be able to avoid adverse effects as required by the NZCPS.
121. I therefore recommend that the burial of a network utility pipeline be separated from Rule 22 and become a new restricted discretionary

rule. The matters of discretion would be the same as the matters of control from Rule 22. This would provide Council the ability to avoid significant impacts on sensitive marine benthic habitats, threatened ecosystems, and nationally significant ecosystem types consistent with NZCPS Policy 11.

Rule 34 – other structure erection or placement not provided for in Rules 18 – 32

122. First Gas Ltd is seeking amendment to Rule 34 of the Plan to make network utility underground pipelines or pipelines attached to existing bridge or access structures in Outstanding Value coastal management area a Controlled Activity (rather than Non-complying).
123. The S42A Officers recommend an alternative relief by amending Rule 22 (Network utility structure erection or placement) to include Outstanding Value coastal management areas as a Controlled Activity.
124. As discussed earlier in my evidence at paras 117-121, it is not possible to manage the effects of a buried pipeline under a controlled activity status. Policy 1 of the proposed plan notes that Outstanding Value coastal management areas characteristically have exceptional biodiversity values or contain marine areas with legal protection. Given the exceptional values of these areas and the concerns I have raised above in relation to Rule 22, it is my view that it is not appropriate to include Outstanding Value areas in Rule 22. I disagree with the officer's recommendation and consider that a restricted discretionary activity status is more appropriate.

New rule 34A

125. Transpower NZ Ltd requested that a discretionary new rule be included in the plan that provides for regionally important infrastructure in coastal management areas: Outstanding Value; Estuaries Unmodified and reads as follows:

“Structure erection or placement associated with Regionally Significant Infrastructure (or the National Grid) and any associated works:

(a) occupation of space in the common marine and coastal area and does not come within or comply with Rules 18 to 32.”

- 126 The S42A Officers recommend declining the relief. The new rule would apply to activities with significant adverse effects that cannot comply with any other plan rules. Non-compliance with the rules is likely due to the activity creating significant adverse effects which are potentially inappropriate. As the Officers note, the Outstanding Value and Estuaries Unmodified management areas have exceptional/significant values which require a higher level of protection.
- 127 I support the Officer's recommendation to decline proposed new rule 34A.

Rules 35 – structure maintenance, repair or minor alteration

- 128 The Minister of Conservation submitted seeking that Rules 35 and 37 include new standards which address:
- How the use of vehicles and machinery in the coastal environment will be avoided where possible, and minimised/effects mitigated where necessary (including taking the shortest and least sensitive route);
 - The requirement for construction equipment including spoil, litter or equipment to be removed within 24 hours of completion of any works; and
 - The prohibition of any refuelling or fuel storage occur within the coastal environment. Methods should be employed to avoid any fuel spillage.
- 129 Officers recommend declining this relief, commenting that these standards are unnecessary and addressed by existing standards (d) and (e) in Rule 35.
- 130 Maintenance, extension and alteration of structures generally requires the use vehicles and or heavy machinery on beaches, estuaries, and other coastal areas. As discussed in the evidence of Mr Neale, vehicles in the coastal environment can result in adverse effects

including crushing, compaction, tracking, vegetation destruction and surface alteration in vulnerable areas such as mudflats, shellfish/crab beds, saltmarsh and estuaries.

131 Officers consider that standard (e) addresses the effects identified above. This standard requires that *“the extent of disturbance of the foreshore and seabed is limited to the minimum required to undertake the activity”*. While this condition goes some way toward avoiding the adverse effects of vehicles, I am still concerned that there is no requirement to mitigate or remediate any disturbance. Depending on the structure, and the nature of the maintenance, the level of disturbance required to undertake the activity may be significant. In my opinion there needs to be a requirement to restore and remediate the site once works are completed, to the extent practicable.

132 I recommend a new standard is included as follows:

(j) There is no visible disturbance to the foreshore and seabed 48 hours after completion of the activity, or any disturbance to the foreshore or seabed is restored to its previous state;

133 In my opinion, the prohibition of any refuelling or fuel storage in the CMA is impracticable and onerous as any vehicle with a fuel tank would be captured by this standard. However, the storage of other fuels or chemicals ancillary to the activity in the CMA (such as the storage of fuel containers) is also permitted under this rule. The damaging or spillage of these containers is a risk with low probability but potentially significant adverse effects. I do not agree with the Officer's statement that (d) addresses this risk.

134 In my view an additional standard is required to manage the risk of debris, fuels, or other chemicals entering the CMA as follows:

“steps are taken where practical to avoid storing fuel in the CMA, and to minimise the extent of any contaminant entering the coastal marine area”

Rule 37 – network utility structure repair, alteration or extension

135 The Minister of Conservation submitted on Rule 37 seeking an additional standard which limits the size of any extension to the structure.

136 Officers have recommended new standard (aa) in response to this submission point as follows:

“(aa) the structure envelope, including length, width and height does not increase beyond 10% of the original size within a 24 month period.”

137 In my view this new standard goes some way to ensuring that structures do not ‘creep’ into the CMA through multiple extensions. However I consider the frequency of extension allowed to be too high. I note that Mr Neale identifies that structures in the CMA can have a range of adverse effects and there is a risk of cumulative adverse effects.

138 In my view, if an existing structure requires extensions more frequently than every five years, it should be subject to a discretionary (Rule 42) or non-complying (Rule 43) consent depending on its location.

139 I support the Officer’s recommendation with the following amendment.

“(aa) the structure envelope, including length, width and height does not increase beyond 10% of the original size within a ~~24-month~~ 5 year period.”

Rule 38 – structure removal and replacement

140 The Minister of Conservation submitted on Rule 38 seeking the same amendments as those requested for Rule 35 (see paragraph 128 of my evidence) to manage the effects of vehicles in the coastal environment.

141 Officers have recommended deleting Rule 38 to ‘avoid confusion for Plan users and instead rely on Rules 44, 45 and 46 for the removal aspect of the structure, and Rules 18 to 34 for the ‘replacement’. I am not opposed to the deletion of this rule, but I still have concerns with Rule 44 as outlined below.

Rule 44 – structure removal or demolition

- 142 The Minister of Conservation submitted on Rule 44 seeking the same amendments as those requested for Rules 35 and 38 (see paragraph 128 of this statement) to manage the effects of vehicles in the coastal environment.
- 143 Similarly, officers have declined the relief and comment that it is unnecessary as the effects are managed by standards (a) and (c). I have already outlined my concerns with standard (a) at paragraph 131 of my evidence and will not repeat them here. Standard (c) requires that *“the activity does not significantly affect sediment movement or lead to increased erosion or scour”*. In my opinion this standard does not manage the risk of debris, fuel, or other chemicals entering the CMA.
- 144 I recommend that the standards outlined in paras 132 and 134 also be included in Rule 44.

Rule 52 – collection of benthic grab samples

- 145 Trans-Tasman Resources Ltd submitted seeking that Rule 44 is amended by deleting reference to the need to avoid effects on regionally distinctive species and sensitive benthic habitats.
- 146 I support the recommendation of officers to decline this relief and retain the recognition and protection of these indigenous biodiversity values.

Rule 54 – burial of dead animals

- 147 The Minister of Conservation submitted on Rule 54 seeking the following amendment:
- “(e) except for seals, where a marine mammal is buried, the relevant iwi authority is notified prior to the burial taking place”
- 148 As outline in the evidence of Mr Lilley, dead seals frequently turn up in the Taranaki coastal environment and require burial. My understanding of the intention of condition (e) is to provide for mātauranga and tikanga Māori, and allow tangata whenua to practice their kawa (customary practices). I consider that the above

amendment is appropriate as it allows for these practices, without placing an unnecessary burden on plan users.

149 Officers have recommended granting the above relief, and I support that recommendation.

New rule 61A

150 Transpower New Zealand Ltd submitted seeking a new discretionary rule for other disturbance, damage, destruction, removal or deposition associated with Regionally Significant Infrastructure (or the National Grid) and any associated works. These activities would be discretionary in estuaries unmodified and outstanding value coastal management areas.

151 Existing rule 61 adequately provides an appropriate level of protection for those higher value areas, and Policies 6 and 6A, when read alongside Policy 14, provide a clear framework for managing national grid and regionally significant infrastructure in these sensitive areas.

152 Officers recommend declining the submitter's relief. I support their recommendation.

SCHEDULES

Schedule 1, 4A and 4B - mapping areas of significant indigenous biodiversity

153 The Minister of Conservation submitted in request of identification and mapping of significant indigenous biodiversity areas – in particular to support Schedule 4A. Royal Forest and Bird Protection Society sought the identification of significant indigenous biodiversity areas and including them in the maps under the corresponding coastal management area in Schedule 1. The Minister of Conservation supported this point in their further submission.

154 This s42A report does not recommend mapping of significant indigenous biodiversity due to an incomplete record and data and knowledge gaps. However, officers do recommend specific layers to be included in the planning maps for significant indigenous

biodiversity where complete, including the maui dolphin sanctuary and the significant sea bird areas.

Why is it important to map indigenous biodiversity?

- 155 Identification and mapping provide certainty for those wishing to undertake activities in significant indigenous biodiversity areas, and for the management of the values of those areas. Mapping allows potential consent applicants to be aware of any potential significant indigenous biodiversity at an early stage.
- 156 Mr Donald Neale, in his evidence, addresses the topic of mapping indigenous biodiversity. He comments that there are both benefits and disadvantages of including significant indigenous biodiversity mapping information in a plan. I support his comment that a collective resource of information can have many benefits to inform planning, assessment of effects, and decision-making (while acknowledging that some information is sensitive).

What kinds of areas could be mapped and included?

- 157 I acknowledge that information gaps, which is a particular issue in the marine area, may mean it is not possible to map with confidence the full habitat of a threatened or at risk species. Attempting to do so may have perverse policy outcomes.
- 158 Mr Donald Neale discusses areas that could be mapped, which includes:
- “... bird breeding and feeding locations (eg mudflats, colonies, roosts), rocky reefs and shores, lizard habitats, islands and rock stacks, seal colonies, marine and estuarine vegetation, shellfish beds, biogenic habitats, migration routes (e.g. marine mammals, fish, birds), spawning areas, rare & threatened ecosystems, and critical habitats.”*
- 159 I request that areas of significant indigenous biodiversity are identified and mapped, where the Council has available information, and efforts should be made to fill in the knowledge gaps.

Schedule 2 – Project Reef

- 160 Trans-Tasman Resources is seeking that Project Reef is deleted from Schedule 2 and is no longer referenced as an area of outstanding value.
- 161 The evidence of Mr Lilley highlights some of the significant natural values of the reef, which is highly valued by the community. The areas are assessed as outstanding natural character and it should be recognised in the plan as such, to give effect to the NZCPS, and the RPS.
- 162 Officers recommend retaining Project Reef as an outstanding natural character area, which I support.

Graeme Silver

DATED this 12th day of July

BEFORE THE TARANAKI REGIONAL COUNCIL

Under **The Resource Management Act 1991**

And

In the matter of **The Proposed Coastal Plan for Taranaki**

**Statement of evidence of Donald Malcolm Neale
on behalf of the Minister of Conservation
Dated 12 July 2019**

Department of Conservation

P O Box 10 420

WELLINGTON

Solicitor acting: M Downing

Telephone: 027 564 1428

Email: mdowning@doc.govt.nz

Introduction

1. My full name is Donald Malcolm Neale.
2. I am employed by the Department of Conservation as a Technical Advisor (Marine Ecosystems) based in Hokitika. I have worked for the Department of Conservation as a coastal and marine specialist since December 1987. I have 31 years of experience in coastal and marine management, policy and science. While much of my work during that time has been focused on the West Coast Region – Te Tai o Poutini, I have scientific diving and field survey experience in other parts of New Zealand, including the Subantarctic Islands, Rakiura/Stewart Island, Fiordland, Canterbury, Marlborough, Tasman and Northland. I have authored or co-authored more than 15 published scientific and planning reports, as well as numerous unpublished internal advice reports and statements of evidence, relating to coastal management. I have some knowledge of the Taranaki coastal environment, including a field inspection on 16-17 July 2019 of key sites along the region's coast from north to south.
3. My qualifications include a Bachelor of Science majoring in Geography and Zoology (1985), and a Master of Science (1st Class Honours) in Geography (1987) from the University of Canterbury. My M.Sc. thesis studied the coastal geomorphology of South Canterbury.
4. I am a founding member of the NZ Coastal Society and have been their Publications Co-ordinator on the executive committee since 2016, and a Regional Co-ordinator. I am a past executive committee member of the NZ Marine Sciences Society.
5. My role as a Technical Advisor (Marine) includes assessing and providing advice on aspects of marine ecology, coastal resource management, coastal physical processes, coastal hazards, marine protected areas, marine mammals and other species, wetlands and estuaries, coastal plans and permits, coastal structures and aquaculture.
6. In preparing my evidence I have read the proposed Taranaki Regional Coastal Plan and the s42A report on decisions requested and officers' recommendations. I have also reviewed relevant scientific literature on the estuarine and marine ecosystems of Taranaki, including the references listed at the end of my evidence.

Code of Conduct

7. I have read and agree to comply with the Code of Conduct for Expert Witnesses produced by the Environment Court. While this is not an Environment Court hearing, I have prepared this evidence in accordance with, and I agree to comply with, that code for this hearing. I have not omitted to consider material facts known to me that might alter or detract from the opinions expressed. I confirm that the issues addressed in this brief of evidence are within my area of expertise.

Scope of evidence

8. My evidence will deal with the following:
- a. Coastal hazards
 - b. Biodiversity, indigenous habitats & species
 - c. Coastal environment line
 - d. Structures
 - e. Sediment & spoil deposition
 - f. Aquaculture

Coastal Hazards

9. Objective 13 of the s42A recommendations allows for coastal hazard risks to be increased up to 'acceptable levels'. In my opinion, it is unusual for an objective to allow an increase in risk. Based on my experience, the definition of what might be 'acceptable' levels of risk would add a degree of uncertainty to the decisions that need to be made. The levels of acceptable risk relating to coastal hazards and their associated activities (such as coastal rock protection works) are likely to be quite different for a landowner, a property developer, a beach user or a Council. However, I consider that the common objective of those parties should be to not increase the level of risk.
10. I note that this objective, especially if read in isolation, could overlook the need for a full prior assessment of coastal hazard risk and response options. For example, rock protection works might be seen as an immediate but perhaps inappropriate fix to prevent an increase in risk resulting from ongoing coastal erosion. As the s42A report recommends, it is important that each objective is not viewed in isolation from other plan provisions.

11. At a national level, the degree of risk from coastal hazards could be regarded as moderately high and increasing. These increasing hazard risks have largely arisen as a result of (a) past developments being allowed in what have turned out to be inappropriate places, before the more recent times when coastal hazards have become much more clearly understood, (b) increasing demand for the use of coastal land, and (c) changes in natural coastal processes in part resulting from climate change and sea level rise. The Taranaki coast is not exempt from these trends.

Biodiversity, indigenous habitats & species

12. The Minister has raised several matters in submissions relating to biodiversity, marine habitats and species.
13. Policy 1(d) of the Proposed Plan does not explicitly recognise that the open coast coastal management area provides habitat for marine species. In my opinion it is important to recognise that the open coast areas support a wide range of species and habitats specifically adapted to the exposed and high energy environments that are less of a feature of other coastal areas. Some examples of ecologically significant species that inhabit the open coast areas are dotterels, reef herons, humpback whales, Māui dolphin, and Cook's scurvy grass. I consider the s42A report's recommended change to Policy 1(d)(ii) to be appropriate from a natural heritage perspective.
14. Method 6.4 (Natural Heritage) does not propose any methods to protect wildlife from dogs. Dogs in the coastal environment can have significant effects on coastal wildlife, and are one of the major threats in New Zealand to flightless and coastal ground-nesting birds like blue penguins (<https://www.westcoastpenguintrust.org.nz>). Other wildlife such as seals, waders and coastal birds can also be disturbed, injured or killed by dogs. Even short-term effects such as scaring birds into flight or chasing seals out to sea can have the potential for longer term effects such as abandonment or reduced usage of significant wildlife habitats. The s42A report's recommended change to broaden Method 14 (under 6.4) to cover advocacy for significant indigenous biodiversity is an improvement, but adding another method relating to the protection of native wildlife from dogs and human activities would help to emphasise locally driven and species-focussed approaches.

15. Rule 52 (scientific grab samples) includes a provision to protect regionally distinctive species. While the maximum size and volume allowed by this provision means that impacts are generally well controlled, it is important that the plan protects regional distinctiveness as well as nationally significant features. Regionally distinctive species (such as those listed in Schedule 4A) add diversity to New Zealand's marine environments and play a significant part in creating the differences that occur around the country's coastline.
16. Schedules 1 to 4 list, map and describe a variety of significant areas, species and ecosystems, and the Minister has submitted in support of identifying and mapping areas of significant indigenous biodiversity in the plan.
17. In my opinion, there are both benefits and disadvantages of including such biodiversity information in a plan, but the key point should be that information is readily available and is actively used and enhanced to implement the plan. A collective resource of information can have many benefits to inform planning, assessment of effects, and decision-making (while acknowledging that some information is sensitive).
18. If mapping is done, it is important to emphasise that the information presented does not necessarily portray the full extent of the values that actually exist. Some sites might be omitted or inaccurately mapped due to environmental change or lack of knowledge. This is especially the case for underwater environments that are generally less well understood.
19. The s42A report notes the difficulties of having incomplete information about marine areas, which are difficult to access and survey. Based on my experience as a diver and with other marine surveys, I consider that this will always be a problem, and that only a limited portion of the underwater marine environment can be surveyed, mapped and described. Knowledge about the marine environment often depends on collaborative storage and open sharing of information gained by a wide range of people.
20. Consequently, it would be sensible for any schedules and maps to be regarded not as a definitive list of all significant sites, but rather as a starting point for information about the region, and a guide to the known sites and the types of

values that occur there. Mapping in a public format can also help to inform potential consent applicants at an early stage.

21. Removing the Plan's schedules and maps of the region's known significant areas could risk having those features overlooked, resulting in poor resource management decisions.
22. As well as identifying the various management areas specified in the schedules, significant values that could be mapped, as part of or in support of the plan, include bird breeding and feeding locations (eg mudflats, colonies, roosts), rocky reefs and shores, lizard habitats, islands and rock stacks, seal colonies, marine and estuarine vegetation, shellfish beds, biogenic habitats, migration routes (e.g. marine mammals, fish, birds), spawning areas, rare & threatened ecosystems, and critical habitats. To do this, the Council could draw from a range of information sources (and has done so), including national inventories, published survey reports, thematic databases and unpublished expert knowledge. Efforts should continue to be made - by everyone involved in coastal management - to fill in knowledge gaps.

Coastal environment line

23. Policy 4 describes the inland extent of the coastal environment. In my experience, the coastal-marine interface is distinctive and important in many ways, and essential to the survival of many species: it creates an environment that is dynamic and rich in resources. The coastal environment is defined by a range of criteria including water flows, physical attributes, visual landscapes and biological patterns & movements, so it can be very difficult to define the coastal environment with a single line. Nevertheless, an indicative coastal environment line can give an indication of the significance of the link between land and sea and can help to manage the effects of terrestrial activities on the sea (and vice versa).
24. I therefore concur with the Council's s42A recommendation, which agrees to map the coastal environment line but allows for consideration of areas landward of the line on a case by case basis.

Structures

25. Several Policies and Rules in the Plan address the management of structures in the coastal marine area. In my opinion, the s42A report recommendations would allow significant adverse effects to occur in some situations.
26. Policy 38 deals with the removal (and non-removal) of coastal structures, and submissions discuss the abandonment of structures in certain circumstances.
27. Abandoned structures in the coastal marine area can cause a range of impacts depending on the type and location of the structure. Examples include:
 - a. Abandoned coastal rockworks and protection structures can lead to increased scour or erosion of adjoining land
 - b. Abandoned wharves, piles, buoys, ropes and floating structures can create navigation hazards, substrates for the establishment of invasive species, and biosecurity risks
 - c. Abandoned structures made of plastics & synthetic materials can deteriorate and produce solid and chemical wastes into the marine environment
 - d. Abandoned structures that are large, or in accessible or natural locations, can have visual landscape, natural character & amenity impacts
28. If full removal is not feasible (e.g. buried anchor blocks), then even partial removal of structures can address some of the concerns. In some cases, the removal of a structure is rightly regarded as being unfeasible or unsafe (for example, due to the practical or technical difficulties of working with heavy machinery in murky or turbulent seas, or under the seabed).
29. In my experience, it is good practice to consider and provide for the eventual removal and decommissioning of structures during the initial consent stages of any coastal permit, rather than at the end of their useful life.
30. In relation to Rule 22 and Rule 34, the construction, installation or decommissioning of underground infrastructure can have significant negative impacts such as vehicle tracking, trenching, surface damage, vegetation loss and weed/pest introduction. Areas of high or outstanding value such as estuaries and marine protected areas are likely to be more vulnerable to such

effects: for example, estuarine tidal mudflats and vegetated saltmarsh areas often have high natural values that support rich biological communities, but they can suffer significant habitat disturbance from surface activities like the vehicle access and mechanical excavation required to install and bury artificial structures. Some vehicle track marks and sediment spoil on sheltered estuarine mudflats are removed only by bioturbation (e.g. worm & crab activity) and not by currents and waves, and so their visual and ecological effects can remain for a long time.

31. The burial of pipes or cables can help to mitigate some effects, but burial is seldom permanent in a dynamic coastal environment. The natural (or accelerated) processes of coastal erosion, sediment movement, bed changes and channel migration can expose an underground or buried structure over time. Once exposed, it will then function as an unburied structure laid on top of the substrate, with associated effects such as current modification and scour, navigation and entanglement issues, substrates for pest species, and changes to the natural character and visual amenity of the area.
32. Coastal structures covered by the proposed Rule 34 can come in many forms and it is not possible to predict what effects they might have without a reasonable level of investigation into their characteristics (eg size, location, materials, design and position). In my opinion, it is therefore important to provide for a proper assessment of effects for such structures, because they have the potential to adversely affect significant biodiversity, coastal dynamics and other features. It is conceivable that such assessments could identify significant adverse effects whereby it would be appropriate for a consent application to be declined.
33. Rules 35, 38 and 44 of the proposed Plan allow the minor maintenance (35) or removal and demolition (38 & 44) of structures as a permitted activity. Operations involved in such maintenance can sometimes have significant adverse effects. For example:
 - a. Vehicles can have significant adverse effects on the coastal marine area, including: wheel & track damage, compaction, crushing, vegetation destruction, weed and pest incursion, surface alteration, chemical & fuel spillage, wildlife disturbance and noise. Such effects are especially pronounced in vulnerable areas like mudflats, shellfish/crab beds, saltmarsh and estuarine vegetation.

- b. The avoidance of fuel spillage in coastal waters is almost always preferable (easier and cheaper) to a cleanup of an accidental spill. Limiting the presence and use of fuels in those areas is a very effective way to minimise the risk of fuel spillage.
 - c. Equipment and spoil remaining on site for longer than necessary can be disturbed by unexpected floods, tides or weather conditions that are typical of coastal environments. It is therefore sensible to ensure that sites are remediated as promptly as possible.
34. Rule 37 does not place any restriction on the size of an extension to a structure, so it remains possible for an extension to significantly increase or alter a structure's effects on the environment, by altering current flows or smothering seabed biota. The s42A report's recommended addition of Standard (aa) to Rule 37 (limiting extensions to 10% every 24 months) goes part of the way to alleviating this concern, but the recommended Standard (aa) could still allow the structure to grow in progressive increments, to the extent that the cumulative adverse effects become significant. In some cases, even a small (<10%) extension of a structure (for example, a bridge approach reaching into a river channel or across the shore) can impede the flow of water or sediment, or direct the flow to other locations, and so have effects on the physical stability of the channel or shore.
35. The construction and ancillary activities involved with any extension could also have adverse effects (e.g. machinery movements, excavations and discharges). Adverse effects are especially likely in sensitive or vulnerable sites such as estuarine margins and mudflats, river & stream outlets and rocky coasts.

Sediment & spoil deposition

36. Policy 44 recommendations in the s42A report to retain clause 44(f) are appropriate in my opinion, encouraging deposited materials to have a similar composition to the existing substrate.
37. The marine environment is a very effective natural sorter of sediments. For example, estuaries tend to hold mud and fine sediments, beaches have mostly medium sands to gravels and cobbles/shingle, and boulders form ramps at the base of cliffs where finer materials are swept away by wave action.

38. The artificial placement of sediment from another source can have very significant effects on the character and ecology of a site. This is especially the case if the deposited sediment is different to the materials that naturally occur there.
39. Deposition of sediment can have effects on both the physical and biological character of an area:
 - a. Plants and animals are often finely adapted living in specific types of sediments. For example, *Amphibola* mud snails will live on mud and fine silt but much less so on medium or coarse sand. Worms burrow into fine sediments. Wading birds often gather in areas that suit their flocking behaviour, feeding methods and main prey species – probing the mud and roosting on the sand flats. Different fish species likewise tend to prefer quite specific sediment and substrate types.
 - b. Marine sediment deposits are often (but not always) very well sorted, which produces large spaces between particles that enhance drainage. Alteration of sediment composition (eg by dumping spoil material from another location) can affect the hydrology of a site, including impeding the drainage and exacerbating erosion.

Aquaculture

40. New Policy 5A proposes to identify appropriate places for aquaculture and to exclude aquaculture from Outstanding Value Areas, Estuaries and areas of significant indigenous biodiversity. Such areas have a range of natural values that are vulnerable to impacts from activities and are recognised for their significant values.
41. Aquaculture can bring a range of impacts on natural character and natural resources including seabed deposition of materials and waste, occupation of space, landscape and natural character effects, altered water quality and nutrient levels, and biological changes.
42. Effects of aquaculture are often uncertain and depend on hydrological modelling and adaptive management. Adaptive management is a risky way to

manage sites that are of high or outstanding value, or vulnerable to impacts of activities, because it depends on responding to observed impacts as they occur. Frequently, a better way is to take a more precautionary approach by directing such activities away from sensitive areas to places where unanticipated impacts are less critical, and where the effects can be tested in a systematic but adaptive way.

43. In my opinion, Policy 5A would help to ensure that significant natural values are protected from aquaculture activities.

Conclusion

44. In my opinion, the s42A report recommendations are generally appropriate for the matters I have discussed in my evidence, but they would allow significant adverse effects to occur in some situations, especially related to coastal hazards, indigenous biodiversity, structures, and aquaculture.

Donald Malcolm Neale

BEFORE THE TARANAKI REGIONAL COUNCIL

Under **The Resource Management Act 1991**

And

In the matter of **The Proposed Coastal Plan for Taranaki**

**Statement of evidence of Callum David Lilley
on behalf of the Minister of Conservation
Dated 12 July 2019**

Department of Conservation

P O Box 10 420

WELLINGTON

Solicitor acting: M Downing

Telephone: 027 564 1428

Email: mdowning@doc.govt.nz

Introduction

1. My full name is Callum David Lilley.
2. I am employed by the Department of Conservation (DOC) as Senior Ranger/Supervisor – Biodiversity in New Plymouth. I have worked for the Department of Conservation since October 2006. During this time, I have predominantly specialised in marine and coastal work in the Taranaki Region. I have experience in conservation management and survey of coastal and marine flora and fauna, marine mammals and marine reserves. I grew up in Taranaki and since my youth have spent considerable time exploring Taranaki beaches. This has been for the purpose of recreational pursuits such as fishing, surfing and snorkelling, as well as through my role as a coastal and marine DOC Ranger and as an Honorary Fisheries Officer for MPI undertaking coastal patrols.
3. I hold the degrees of Bachelor of Science majoring in Zoology and Master of Science majoring in Marine Science from the University of Otago.

Code of Conduct

4. I have read and agree to comply with the Code of Conduct for Expert Witnesses produced by the Environment Court. While this is not an Environment Court hearing, I have prepared this evidence in accordance with, and I agree to comply with, that code for this hearing. I have not omitted to consider material facts known to me that might alter or detract from the opinions expressed. I confirm that the issues addressed in this brief of evidence are within my area of expertise.

Scope of evidence

5. My evidence will deal with the following, with particular regard to my experience in the Taranaki Region:
 - a. Impact of dogs on indigenous wildlife in the coastal environment
 - b. Marine reserve marker buoys as navigation aids
 - c. Burial of marine mammals
 - d. Project Reef as an area of Outstanding Natural Character

Impact of dogs in the coastal environment

6. Policy 17 (Public access) of the Proposed Coastal Plan for Taranaki (the Proposed Plan) provides for restrictions on public access (where necessary) to protect significant natural values and threatened and at-risk indigenous

species. However, Method 6.4 (Natural Heritage) does not propose methods to protect indigenous wildlife from dogs, which in my opinion are a major threat to vulnerable coastal fauna.

7. I support the s42A report's recommended change to Method 14 to provide for advocacy to relevant agencies to protect significant indigenous biodiversity. However, given the level of threat that dogs present to protected indigenous coastal species such as penguins, shorebirds and N.Z. fur seal, I think the plan needs to more clearly emphasise means of managing the threat that dogs pose.
8. Over the years, I have observed once-isolated beaches with few visitors now experience *relatively* frequent visitation. I believe this has come about through more visitors, sprawling sub-division and because the Taranaki region is experiencing population growth. A proportion of these visitors visit with their dogs which are often not under control, either on a leash or in immediate proximity and responsive to verbal commands. Houses adjacent to once isolated coast now have resident dogs that are walked on the beaches most evenings.
9. I frequently observe dogs chasing and disturbing shorebirds. Owners are often oblivious to the impacts this has on those species. During this time birds are unable to feed or rest, and eggs in nests can be vulnerable to breakage. Adults may also abandon nests following continued harassment.
10. One of the indigenous species most threatened by dogs is blue penguins and the result of an interaction is often death. The threat status of blue penguins is "At Risk – declining"¹. The flightless seabird is most vulnerable on beaches at dawn and dusk as they move between the water (where they feed during the day) and their burrows. However, I have also followed up instances of dogs killing penguins during the day. Penguins are found along much of the Taranaki coastline in quite low numbers. However, there are sites including Port Taranaki, Urenui and Wai-iti that are considered hot-spots or colonies.

¹ Robertson, H.A.; Baird, K.; Dowding, J.E.; Elliott, G.P.; Hitchmough, R.A.; Miskelly, C.M.; McArthur, N.; O'Donnell, C.F.J.; Sagar, P.M.; Scofield, R.P.; Taylor, G.A. 2016: Conservation status of New Zealand birds, 2016. *New Zealand Threat Classification Series 19*. Department of Conservation, Wellington. 23 p.

11. Some people refuse to believe that their dog will kill a penguin, but penguins are very attractive targets to even well-trained dogs. They are small, smelly, unable to defend themselves and will run when disturbed. Dogs generally grab them by the chest, rump or neck and shake them. Attachment 1 shows some examples of blue penguins killed in this manner. Even small dogs can kill a penguin this way, and death can occur within a couple of seconds. Sometimes a smaller dog will catch a bird by the head, which can cause severe injury to an eye (Attachment 2). Even if the bird survives the attack, they will likely not survive in the wild should they need to be rehabilitated. In those instances, the penguin may need to be euthanised (see Attachment 2).
12. During my first few years working for DOC, instances of reported dog attacks on blue penguins were relatively rare. I began keeping records in 2010 following six instances of dogs killing penguins within six months. Attachment 3 shows a Taranaki Daily News article relating to the death of two of these birds. (I sent these birds to Massey University for necropsy and the pathologist's report confirmed dog attack as the likely cause of death). Since then, I have documented 47 instances of blue penguins being attacked by dogs. All but six of these have died. Those that have survived have been through long treatment and rehabilitation prior to release.
13. I suspect the number of penguins killed by dogs is considerably higher because:
 - a. Many will be killed in isolated areas and never reported. Owners of dogs that have killed penguins seldom report the attack. In Taranaki, the majority of dead or injured penguins are found where visitation is highest, generally around New Plymouth between Back Beach and Waiwhakaiho. However, the number of penguins present in some remote areas is likely higher as the birds are less exposed to domestic pets and habitat modification.
 - b. If an adult is killed in breeding season before chicks fledge, then those chicks will die. One adult being killed may result in three penguin deaths. Starved chicks are unlikely to ever be discovered.
 - c. I frequently observe dogs off-leash and running through dunes, caves, and vegetation well above the high-tide mark where there are likely to be nests. Their owners are generally walking on firm sand in

the intertidal zone. I suspect many penguins are killed without their owners ever knowing.

14. The records I have detailed are penguins that have “probably” been killed by dogs. Those are the cases where the cause of death by a dog are apparent. The attack may have been witnessed, or there may be signs consistent with dog attack. An example is that at times a dog will put its paws on the body of the penguin and pull at its head with its mouth, elongating much of the spine and stretching out the neck (see Attachment 4 for examples). Sometimes there will be puncture wounds and I will cut back the skin and find massive internal haemorrhaging (Attachment 5). At times, I may have suspected an attack as the bird had been in good condition, but the body was found in an odd or suspicious location. In these instances, I have sent the carcass off to Massey University for necropsy and the cause of death has been confirmed through a pathology report (see Attachment 6 for examples of pathologist reports).
15. In January of this year, a Taranaki Regional Council Scientific Officer was at Port Taranaki monitoring the area after a diesel spill. She found two dead penguins on the Lee breakwater with puncture wounds that she suspected were from a dog. While there, a member of the public reported that there was a third bird that they had thrown down amongst the rocks. The tide was coming in and the Officer was unable to locate this bird. She took GPS waypoints of where the birds were found (Attachment 7), photographed the birds (Attachment 8) and sent them to Massey University to investigate whether there was any link to the spill. There was no sign of oiling and the pathologist concluded the injuries were consistent with dog attack (Attachment 9). I consider the most probable cause of death of the third bird was also dog attack.
16. New Zealand fur seals are also threatened by dogs. Often dogs just bark and harass seals, but they can nip, bite and kill them too.
17. While the only fur seal breeding colony is centred around the Ngā Motu/Sugar Loaf Islands, seals haul-out to rest along much of the Taranaki coast. Seal pups are most vulnerable due to their small size, particularly un-weaned pups that can be left for several days while their mothers head out to sea to feed.

18. In my time with DOC I have followed up a number of reports of dogs attacking seals. Often seals have escaped with minor to moderate wounds. However, their fate is not always able to be determined as they will often head into the water to escape the threat and may not be sighted again. I personally have followed up three instances of pups that have been killed by dogs and one female adult. In addition, I have had to euthanise another two adult seals due to major injuries inflicted by dogs as they were suffering and not likely to survive.
19. The onus is often put on the Department of Conservation to deal with the threat of dogs on protected marine mammals (under the Marine Mammals Protection Act 1978) and indigenous wildlife (under the Wildlife Act 1953). However, besides from signage and advocacy which is often not taking on board by owners, law enforcement response by DOC is very much “the ambulance at the bottom of the cliff”. It is also challenging to use prosecution as a deterrent as information that we receive is inadequate to identify owners and follow-up action is not possible.
20. In my opinion encouraging district councils to implement and enforce dog control bylaws, and to set appropriate rules around pets and subdivision, will more appropriately help manage the threat of dogs to indigenous coastal wildlife.

Marine Reserve marker buoys as navigational aids

21. Rule 21 of the Proposed Plan allows for certain agencies to install navigational aids as a permitted activity. I consider that DOC should be included as one of those agencies.
22. The Department of Conservation administers the Marine Reserves Act 1971. This Act requires that marine reserves are administered and maintained so that they are preserved as far as possible in their natural state. They are a conservation tool, as opposed to a fisheries management tool, and their purpose is to preserve indigenous biodiversity. Scientific studies of marine reserves allow for a better understanding of marine ecosystems and subsequently, enhanced management of them. Scientists can study the behaviour and ecology of species in the absence of exploitation pressure and better understand natural population fluctuations as opposed to human induced changes.

23. Preservation of a marine reserve depends on the strict observation of a ban on taking or harvesting fish and other marine life. This depends on fishers and gatherers knowing what the no fishing/no taking rules are and where those rules apply.
24. DOC administers two marine reserves in Taranaki. Parininihi Marine Reserve is relatively isolated and is located off the Whitecliffs near Urenui, North Taranaki. Tapuae Marine Reserve is adjacent to the city of New Plymouth. It has multiple access points along the coast and is a short boat-trip from New Plymouth boat ramp which is located in Port Taranaki.
25. Both marine reserves are marked by signage at clearly visible locations near access points, and offshore boundaries are marked by marine buoys. Section 22 of the Marine Reserves Act provides for the marking of marine reserves by beacons, lights, buoys or marks that the Director-General of Conservation considers necessary, provided that concurrence has been obtained by the Secretary of Transport. DOC holds consents from Taranaki Regional Council and Maritime New Zealand for existing installed marine reserve marker buoys.
26. The buoys are special navigation markers. They are yellow, which is a legal requirement for special marks. To be safe and effective, they must be highly visible. The corner buoys of each marine reserve are fitted with lights. These have a distinctive flash sequence. The boundaries of the marine reserves and the flash sequence of the corner buoys are shown on nautical charts.
27. Construction and instalment of the marine reserve navigation buoys is similar to other marine reserves. They consist of a mooring anchor, which is a 500kg concrete block that settles into the sea floor, and a rope and chain attaching the buoy to an anchor. The blocks are placed on a sand/mud seabed. Their placement is known to kill the sessile organisms immediately below them. I have regularly inspected the marine reserve mooring blocks and have observed that over time other sessile organisms colonise them, much the same as small reefs.
28. DOC holds consent for eight marker buoys in Tapuae Marine Reserve and seven marker buoys in Parininihi Marine Reserve. Each of these 15 mooring blocks is approximately 1.8m², so the cumulative impact is less than 30m²

spread across a large distance. In my opinion the impact of these blocks should be regarded as minor and given the species displaced are common, and a fraction of the habitat is impacted, the effects are of little significance.

29. The s42A report has agreed with relief sought by the Minister of Conservation for Rule 21 (Navigation aid erection and placement) to allow for erection of navigation aids as a permitted activity for Taranaki Regional Council or its agents; or Port Taranaki or its agents; or Maritime New Zealand or its agents. In my opinion, I believe DOCs operational responsibility to erect navigational aids has been overlooked and the Department should be added to the list of agencies able to erect navigational aids as a permitted activity.

Burial of marine mammals

30. Rule 54 of the Proposed Plan requires DOC to consult iwi on the burial of marine mammals. This is done for dolphins and whales, but is generally not appropriate for seals. I consider that obligations to tangata whenua regarding marine mammals are best dealt with under DOC's own obligations under various Acts and Deed of Settlement protocols rather than under the Regional Coastal Plan.
31. The Department of Conservation administers the Marine Mammals Protection Act 1978. The Act sets out the Department's responsibilities regarding marine mammals, including their disposal.
32. When dolphins or whales strand, DOC has statutory responsibilities with respect to tangata whenua. Section 50(3) of the Marine and Coastal Area (Takutai Moana) Act 2011 states "When making decisions about managing a stranded marine mammal, a marine mammal officer must... have particular regard to the views of any affected iwi, hapū or whanau expressed to the officer". Policy 4.4(h) of Conservation General Policy acknowledges tangata whenua as kaitiaki and specifies they will be involved in the management of stranded mammals in accordance with agreed protocols. There are also marine mammal protocols in Deed of Settlement agreements between the Crown and Post Settlement Governance Entities (PSGE) that must be adhered to. While Deed of Settlement protocols may vary between settled iwi, they generally reference *stranded marine mammals*. Given that fur seals

are a marine mammal that spends part of their life on land, they do not strand. I therefore consider that DOC's statutory responsibilities are a reference to *dolphins* and *whales* as opposed to seals.

33. When dolphins and whales strand, DOC consults and works with local iwi and hapū through every step of the stranding response, including disposal. Generally, once DOC becomes aware of a stranding, the PSGE or iwi office is notified. The iwi will often hand over to the hapū who holds mana whenua/mana moana over that section of coast. The process of notification and ensuring that DOC is speaking to the right people can at times take several hours. No work is undertaken until procedures such as karakia have taken place. All decisions are made alongside tangata whenua.
34. Stranding events of dolphins and whales are relatively rare and of huge significance to tangata whenua, unlike New Zealand fur seals/kekeno, which are commonly found dead or dying on the coastline. For example, through the last calendar year (2018), the DOC New Plymouth Office received 30 reports of dead seals between Wai-iti in the north and Kaupokonui in the south. On several occasions over the years, I have received reports of as many as three dead seals in the same day.
35. In isolated areas, the preference is to leave dead seals to nature as they break down relatively quickly through natural processes. However, in many areas decomposing seals are deemed a public nuisance and disposal is required. If seals can be easily removed, the preference is to dispose of them down an offal hole. However, removing dead seals can be difficult due to factors such as poor vehicle access and due to the weight of animals. In these instances, seals need to be buried on the beach, provided the location is appropriate.
36. Due to the number of seals found dead on Taranaki beaches and the frequent need to bury them, I consider that Rule 54 (Burial of dead animals) creates an impractical obligation for DOC to notify iwi of seal burials. I also think that notification would cause practical difficulties for iwi as it may then trigger processes to notify hapū. I therefore support the relief sought in the proposed amendment in the s42A report to exempt fur seals from iwi notification when they need to be buried. If there are instances where iwi or hapū do wish to work with the DOC around fur seal burial, then I consider

there are other mechanisms that are better suited to incorporate these wishes.

Project Reef as an area of Outstanding Natural Character

37. In my opinion, Project Reef qualifies as an Area of Outstanding Natural Character under the criteria given in the proposed Plan. While I have not dived the Project Reef myself, I am very familiar with the reef through the findings of Project Reef Life. I have been in regular communication with Project Reef Life coordinator Karen Pratt since before the application to the Ministry of Business, Innovation and Employment's Participatory Science Platform (Curious Minds) fund was made. Since then, Mrs. Pratt and other Project Reef Life members have shared photos, videos and other study findings with me. The purpose at times was to seek my comment, and at other times simply for my information. I have been copied in on email correspondence about the Project Reef with fish and invertebrate experts and have discussed monitoring methods with project members. I have also attended presentations by the group on several occasions where findings were presented to the community.
38. Due to my role with DOC and familiarity with the Project Reef and wider Taranaki coastline, I was requested in 2017 to review an application by the South Taranaki Underwater Club to Taranaki Regional Council to recognise the Project Reef as an area of Outstanding Natural Character. Following this, after discussion with DOC planners and Technical Advisors, I provided an endorsement of the Club's assessment of the Project Reef to Taranaki Regional Council officers outlining some of the special features of that reef. These include:
 - a. The relatively shallow depth of the reef (23m) considering its distance offshore. This makes it less prone to cliff erosion and sediment inputs from river events and other land-based activities. This leads to better water clarity and light penetration which allows kelp and other seaweed to grow a long way offshore.
 - b. The geology of the reef, being comprised of cemented concretionary shelly sandstone, compared to other papa or andesitic cobble/boulder/rock reefs that characterise much of the offshore Taranaki environment.

- c. The size of the reef in an environment that is *generally* characterised as being sandy in nature.
 - d. The complexity of habitat that the reef provides. It is high-relief with cracks, crevices, small caves and overhangs. This is valuable habitat for rock-lobster, eels, rays, carpet sharks and a range of fish species.
 - e. The geological structure is covered with a diverse range of seaweeds, sponges, hydroids and bryozoans. "Biogenic" (living) habitats are considered high-value environments as they are so biologically diverse and provide valuable refuge for juvenile fish and invertebrates.
 - f. The diversity and cover of sponge species.
39. In conclusion, I agree with the s42A report's recommendation to retain the Project Reef (ON6) as an area of Outstanding Natural Character.

Conclusion

40. In my opinion, I think the Plan needs to more clearly emphasise means of managing the threat that dogs pose to coastal wildlife; that DOC should be added to the list of agencies able to erect navigational aids as a permitted activity; that seals should be exempt from the requirement to notify iwi when buried; and that the Project Reef should be retained as an area of Outstanding Natural Character.

Roving dogs suspects in penguin killings

Taranaki Daily News 16/8/13
Jared Smith
jared.smith@dailynews.co.nz

Dog owners are being urged to keep their animals on a leash while on the beach after two little blue penguins were killed at the start of nesting season last week.

Department of Conservation ranger Callum Lilley said a roaming dog was carrying one dead penguin in its mouth on Wai-iti Beach, while the other was found on Ngamotu Beach with puncture marks.

"The birds will be autopsied at the New Zealand Wildlife Centre at Massey University but their injuries suggest a dog attack. It's certainly not our mate the leopard seal. They tend to clamp and don't leave any evidence."

Nesting season toll: Department of Conservation ranger Callum Lilley with two little blue penguins believed to have been killed by dogs last week on the Ngamotu and Wai-iti beaches. Photo: SUPPLIED

"evidence." The leopard seal swam into Port Taranaki on August 6.

Mark Mayburg, who is researching the penguins on a one-year teacher scholarship from the Royal Society of New Zealand, said Wai-iti had a bigger penguin colony than many Taranaki beaches.

In June, the students of Mimi Primary School launched Project Pingu to build and place protective wooden boxes for the penguins to nest.

"We are placing snare traps there, too," said Mr Mayburg.

"But roaming dogs will soon bite into a dwindling population. Local residents Gwen and Ian Wesley used to have penguins walking past their door but they don't see as many now."

At 35 centimetres to 40cm tall and weighing 1 kilogram, the little blues are the world's smallest penguins. Between August and November a breeding pair will usually lay one or two eggs and after about eight weeks the chicks will fend for themselves.

PATHOLOGY REPORT

Submitter's Ref.:	Case Ref:	12/08/2010	Accession No.:	46247
-------------------	-----------	------------	----------------	-------

TO: Colum Lilley
Department of Conservation
PO Box 462
New Plymouth

Species: African-MLC1	Sex: Male	Age: Adult	Breed: Little Blue Penguin
ID:	At Risk	Affected:	Dead: 1
Owner: Department of Conservation	How Acquired:	Time Acquired:	Type: Post Mortem

HISTORY

A dog was observed with the penguin in its mouth, but the observer did not see the penguin being killed.

GROSS FINDINGS

The bird weighed 1.013kg and was in good body condition. The proventriculus and gizzard were empty. There were multiple fractures of the caudal thoracic spine and xiphisternum, and the area associated with extensive tearing of the hypaxial and epaxial muscles, kidneys, both testis, and the subcutaneous tissues over the dorsal xiphisternum. There were multiple large blood clots within the coelomic cavity. No other abnormalities were noted on gross post-mortem.

DIAGNOSIS

Severe trauma to the vertebrae (caudal thoracic and xiphisternum) with multiple fractures and extensive haemorrhage.

COMMENTS

The pattern of injury is consistent with a dog attack when the penguin was alive. Whether it was the particular dog that held the penguin in its mouth that was responsible for the killing, we cannot say for certain.

New Plymouth

Species: Avian WL (1)	Sex: Male	Age: Adult	Breed: Little Blue Penguin
ID: None	AI Ref.	Affected:	Dead: 1
Owner: Department of Conservation	Prev. Acqn.:	Type: Post Mortem	

HISTORY

Found dead on rocks East End Reserve on the morning of 22/04/2015. Dog attack suspected.

GROSS FINDINGS

The bird weighed 1200grams and was in good body condition. There was patchy blood staining of the feathers around the neck and a small amount of blood was present in the oral cavity. Three puncture wounds, each ~10mm in diameter were present on the left lateral aspect of the mid-neck region and near the point of both the left and right shoulders. There was corresponding haemorrhage and tearing of the underlying soft tissue, including the skeletal muscle; the cervical spine was intact but several of the ribs of the right thoracic cage were fractured. There was a ~15mm in diameter area of laceration and haemorrhage of skeletal muscle just caudal to the right scapula; this was roughly 40-50mm caudal to the puncture wound at the point of the right shoulder. There were multiple blood clots within the coelomic cavity. No other abnormalities were noted on gross post mortem.

DIAGNOSIS

Musculoskeletal trauma consistent with a dog attack

COMMENTS

This was an adult male penguin, in good body condition with no obvious signs of any underlying disease. The pattern of damage is consistent with a dog attack.

Pathology Report

Submitter Ref:	Date Sent: 25/01/2019	Accession No.: 56879
To:	Report Sent: 31/01/2019	
	Copy To:	
Email:		
Species: Avian WL	Breed: Little Blue Penguin	
Age: Juvenile	Sex: Unknown	
Owner:	Type: Post Mortem	
ID: PQN-1	Prev. Accl.: 56890	
Submitted: 2	At Risk:	Affected: 2
		Dead: 2

History

Found morning of 27/01/2019, Lee Breakwater, Ngamotu. X-1650758 Y-5676378. Found in vicinity of diesel spill that occurred 21/01/2019.

Gross Findings

The bird weighed 835 grams and was in moderate body condition and almost through the moult. There was extensive blood staining of the feather around the neck and ventral chest and abdomen. Over a dozen full thickness puncture wounds (up to ~10 mm in diameter) were present over the neck, lateral and dorsal thoracic and lumbar regions; many of these were associated with reddening and tearing of the surrounding soft tissues, including the subcutaneous fat and musculature.

There were several rib fractures on the right side of the chest, as well as multiple chip fractures of the thoracic vertebral processes and a non-displaced fracture of the left ischium. There was extensive maceration of both lungs and both kidneys, associated with clotted blood.

Diagnosis

Severe musculoskeletal trauma consistent with dog attack

Comments

Numerous puncture wounds were present externally and there was a large amount of internal damage including multiple rib fractures and extensive damage to the lungs and kidneys. The haemorrhage associated with these lesions indicates the penguin was alive when the damage was inflicted. These injuries are typical of a dog attack in which the dog will often bite multiple times and severely shake the bird. There was no evidence of any external oiling.

		Dead: 2

History

Found morning of 27/01/2019, Lee Breakwater, Ngamotu. X-1650735 Y-567638. Found in vicinity of diesel spill that occurred 21/01/2019.

Gross Findings

The bird weighed 1.57 kg and was in good body condition and about to enter the moult.
There was extensive blood staining of the feathers over the neck and dorsal aspect of the chest and pelvis. At least 8 full thickness skin puncture wounds were present over the right lateral neck and both shoulders. The largest of these was ~30 x 20 mm in diameter and was associated with exposure of the right coracoid, right lateral thoracic wall and coelomic cavity. Much of the skeletal muscle was absent from the right coracoid and right pectoral region. Both the right sternum and scapula were fractured.
There were multiple rib fractures (bilateral) as well as transverse transection of both the cranial and caudal thoracic spine; there were extensive maceration of both lungs and the kidneys and these were associated with clotted blood.

Diagnosis

Severe musculoskeletal trauma consistent with dog attack

Comments

Multiple puncture wounds were present externally and there was a large amount of internal damage including multiple spinal and rib fractures as well as extensive damage to the lungs and kidneys. The haemorrhage associated with these lesions indicates the penguin was alive when the damage was inflicted. Some of the tissue loss was likely the result of post-mortem scavenging, likely from an avian species such as a sea gull. These injuries are typical of a dog attack in which the dog will often bite multiple times and severely shake the bird. There was no evidence of any external oiling.

BEFORE THE TARANAKI REGIONAL COUNCIL

Under **The Resource Management Act 1991**

And

In the matter of **The Proposed Coastal Plan for Taranaki**

**Statement of evidence of Sarah Hucker
on behalf of the Minister of Conservation
Dated 12 July 2019**

Department of Conservation

P O Box 10 420

WELLINGTON

Solicitor acting: M Downing

Telephone: 027 564 1428

Email: mdowning@doc.govt.nz

Introduction

1. My full name is Sarah Ellen Hucker.
2. I am employed by the Department of Conservation (DOC) as a Senior National RMA Planning Advisor in the RMA Team, Operations Group in DOCs National Office. I have worked in central government for 19 years and regional government for 3 years, either as a planner, policy analyst or independent consultant with a focus on sustainable coastal management. Until May 2010 I worked as an independent consultant, from May 2010 onwards I joined the DOC permanent staff. A key focus of my work over the last decade has been the preparation of the *Regional Coastal Plan: Kermadec and Subantarctic Islands* for the Minister of Conservation, which became operative in September 2017.
3. I hold a Bachelor of Science in Geography completed in 1989, Honours in Physical Geography completed in 1990, and a Master of Science in Physical Geography completed in 1994, all from the Victoria University of Wellington. I also completed a certificate of proficiency in Resource Management Law in 1995, also from the Victoria University of Wellington.
4. My current work for DOC involves implementation of that Plan, inputting into DOC submissions on other regional coastal plans on marine biosecurity provisions with a view to ensuring they give effect to Policy 12 of the NZCPS (Harmful aquatic organisms), and other coastal issues as they arise. I provide support to DOC decision makers and the Minister of Conservation on sustainable coastal management matters as required, including marine consents under the Exclusive Economic Zone and Continental Shelf (Environmental Effects) Act 2012.
5. I provided technical advice which informed the parts of the Minister of Conservation's submission relating to harmful aquatic organisms and the *Cleaning of biofouling* provisions in the Proposed Coastal Plan for Taranaki (Proposed Plan).

Code of Conduct

6. I have read and agree to comply with the Code of Conduct for Expert Witnesses produced by the Environment Court. While this is not an Environment Court hearing, I have prepared this evidence in accordance with, and I agree to comply with, that code for this hearing. I have not omitted to consider material facts known to me that might alter or detract from the opinions expressed. I confirm that the issues addressed in this brief of evidence are within my area of expertise.
7. I am authorised to give this evidence on behalf of the Minister of Conservation.

Scope of evidence

8. My evidence focuses on the *Cleaning of biofouling* provisions of the Proposed Plan. Specifically, Policy 28, Rules 9 and 10, and the definitions.
9. I have considered these provisions in: pre-statutory comments on draft provisions; the Department's submission on the notified Plan and Section 32 report; and now the Officer's section 42A Report and the accompanying track changes version of the Proposed Plan showing the Officer's Section 42A Report recommendations.
10. The Minister's submission seeks that the Proposed Plan give effect to the New Zealand Coastal Policy Statement (NZCPS) Policy 12, principally by following the guidance and recommendations of the *Anti-fouling and In-water Cleaning Guidelines* June 2013 (the Guidelines), which were jointly prepared by the Australian Department of Agriculture Fisheries and Forestry and NZ's Ministry for Primary Industries. Accordingly, my evidence discusses:
 - a. the relevant policies of the NZCPS;
 - b. key developments in approaches to the management of biofouling; and

- c. the recommendations in the Section 42A Report.
- 11. Overall, I support the changes recommended by the Section 42A Report, with some clarifications.
- 12. My evidence includes Appendix 1 – The Anti-fouling and In-water Cleaning Guidelines.

New Zealand Coastal Policy Statement - Policy 12: harmful aquatic organisms and other relevant policies

- 13. The NZCPS Policy 12 requires councils to provide for the control of activities in or near the coastal marine area that could have adverse effects on the coastal environment by causing harmful aquatic organisms to be released or otherwise spread, as follows:

“Policy 12 – Harmful aquatic organisms

- 1. Provide in regional policy statements and in plans, as far as practicable, for the control of activities in or near the coastal marine area that could have adverse effects on the coastal environment by causing harmful aquatic organisms¹ to be released or otherwise spread, and include conditions in resource consents, where relevant, to assist with managing the risk of such effects occurring.
- 2. Recognise that activities relevant to (1) include:
 - a. the introduction of structures likely to be contaminated with harmful aquatic organisms;
 - b. the discharge or disposal of organic material from dredging, or from vessels and structures, whether during maintenance, cleaning or otherwise; and whether in the coastal marine area or on land;
 - c. the provision and ongoing maintenance of moorings, marina berths, jetties and wharves; and
 - d. the establishment and relocation of equipment and stock required for or associated with aquaculture.”

¹Harmful aquatic organisms - Aquatic organisms which, if introduced into coastal water, may adversely affect the environment or biological diversity, pose a threat to human health, or interfere with legitimate use or protection of natural and physical resources in the coastal environment (Definition from NZCPS 2010 Glossary).

14. The introduction of harmful aquatic organisms into the coastal marine area can give rise to the following adverse effects, ultimately affecting natural character, life-supporting capacity and the intrinsic value of ecosystems:
 - i. Predation on local resident indigenous fauna.
 - ii. Competition with indigenous fauna species for the same food supply.
 - iii. Loss of habitat of indigenous flora and fauna.
 - iv. Destruction of habitats, which can alter coastal processes and increase the risk of erosion.
 - v. Loss of amenity and intrinsic values of ecosystems.
 - vi. Genetic pollution.
 - vii. Financial costs resulting from changes to the ecosystems and the values that are important to aquaculture and other marine based industries such as tourism, and costs to central and local government (and therefore New Zealanders) associated with eradication or containment.
15. For these reasons the risk of introduction and spread of harmful aquatic organisms to an area needs to be carefully managed.
16. Biofouling is the process of accumulation of organisms on immersed surfaces. In the initial stages of the biofouling process, organic material sticks to a surface and is rapidly colonised by bacteria, microalgae and cyanobacteria forming a microfouling layer (slime layer). The creation of a slime layer occurs rapidly on submerged surfaces. Aside from continuous cleaning, there is currently no effective technology to prevent slime layer formation, including biocidal or foul release coatings (Dobretsov et al. 2010).¹ Any further biofouling development beyond the microfouling stage is

¹ The Science underpinning the CRMS – biofouling, page 4, para 1

referred to as macrofouling. For further context on what biofouling is, why it is an issue and options for its management, refer Appendix 1.

17. Floerl et al. 2010 note that vessel biofouling is one of the main contemporary vectors for the introduction and spread of harmful or invasive species. Most of the 200 or more known marine harmful or invasive species established in New Zealand waters are thought to have arrived on the hulls of ships, a pattern reported from other locations around the world². Vessel biofouling is thought to be the mechanism behind introductions of NIS [non-indigenous species] globally to isolated high-value locations, including sub-polar and polar latitudes³.
18. Implementing practices to control and manage biofouling can greatly assist in reducing the risk of the transfer of harmful aquatic organisms. Such practices can also improve a vessel's hydrodynamic performance and can be an effective tool in enhancing energy efficiency on vessels.
19. Given the list of potential adverse effects listed above at paragraph 14, NZCPS Policy 3 is relevant to the management of risk associated with harmful aquatic organisms. NZCPS Policy 3 promotes a precautionary approach to managing activities in the coastal environment when the effects of those activities are uncertain but potentially significantly adverse. This includes managing activities that could cause harmful aquatic organisms to be released or otherwise spread.
20. A precautionary approach focussed on preventing introductions of harmful or invasive species recognises that there are significant costs involved in attempts at marine pest eradication and the limited success of marine eradications to date (unless detected very early). Examples of marine eradications and the costs involved include:
 - i. The *sabella* (Mediterranean fanworm, *Sabella spallanzanii*) programme aimed at eliminating *sabella* from Lyttelton Port (about 1 km² in area) by

² Floerl et al. 2010 page 1

³ Floerl et al. 2010 page 1

searching and removing individual worms. At the time of planning, the programme was estimated to cost \$3.5 million, but was closed about 18 months into its application because of widespread detections of *sabella* in Auckland. Despite the Auckland findings, the area of the Lyttelton programme was considered to be the limit of feasible elimination for a worm-like species such as *sabella*. The Council's Section 32 report notes that in the last 4-5 years the Council has budgeted approximately a quarter of the million dollars (more than \$1 Million in total) for the control of marine pests but mainly *sabella*⁴.

- ii. Some \$2 million was spent on *Styela clava*, not to eradicate it because it was too well established, but with a focus on education. Despite these efforts, *Styela clava* is still present in all the areas it was originally found, plus in some new areas.
- iii. The eradication programme for the brown mussel (*Perna perna*) incursion after the defouling of the Ocean Patriot oil rig in Tasman Bay cost approximately \$250,000. This was considered a 'relatively' inexpensive response. It was unique in that the incursion site was small because of the nature of the 'incursion', which was known to be recent and therefore not an established population.
- iv. An *Undaria* (*Undaria pinnatifida*) eradication programme was carried out on the Chatham Islands after the Seafresh 1 grounded. This cost the insurers of Seafresh 1—Shipowners Mutual Protection and Indemnity Association—approximately NZ\$2.5 million for salvage attempts, NZ\$380,000 for treatment, and NZ\$43,500 for monthly inspections. Eradication was achieved at only 17% of the cost of failed salvage attempts but required a long-term commitment. In this case, the restriction of *Undaria* to a confined area (i.e. a vessel's hull), the early knowledge of the incursion and rapid response increased the likelihood of eradication. The Ministry for Primary Industries (MPI) have advised, however, that *Undaria* has been detected growing on structures and

⁴ Council's Section 32 Report, page 338, section 8.10.3 second para.

substrate in the Chatham Islands in recent years since the eradication programme.

- v. In 2010, a single *Undaria* sporophyte was discovered in Sunday Cove, Breaksea Sound, Fiordland. An immediate joint-agency response between Environment Southland, MPI and DOC was initiated in an attempt to eliminate this harmful aquatic organism. Since August 2010 monthly diving surveys and control treatments have taken place. Despite this effort, occasional young *Undaria* specimens are still being found. Six and a half years into the response to *Undaria*, operational expenditure is approximately \$1 million, however *Undaria* has not been entirely eliminated from the site and regular treatment continues.
21. In a consultation document for a draft Import Health Standard for biofouling⁵, Ministry of Agriculture and Forestry Biosecurity NZ (MPI's predecessor) noted that:

“In the marine environment, it is often difficult to detect the arrival of new non-indigenous species early enough to make eradication feasible. Tools for detecting, eradicating or managing an established pest are limited, difficult to perform, and expensive⁶.”
22. Floerl et al. 2005 also stress the point that preventing the introduction and establishment of non-indigenous species is the safest and most efficient way to avoid costs and impacts associated with biological invasions⁷.
23. Policy 12 of the NZCPS refers to the introduction of structures likely to be contaminated with harmful aquatic organisms; and the establishment and relocation of equipment and stock required for or associated with aquaculture⁸ as relevant activities with the potential to introduce or spread harmful aquatic organisms. While the NZCPS recognises that aquaculture

⁵ Before the amendments to the Biosecurity Act in 2012 MPI was developing an Import Health Standard to regulate vessel biofouling of vessels coming into New Zealand Waters. After the amendments to the Act the Import Health Standard became the *Craft Risk Management Standard – Biofouling* 2014.

⁶ MAFBNZ 2010, page 5

⁷ Floerl et al. 2005, page 5

⁸ NZCPS 2010 Policy 12 (2)(a) and (d) respectively, page 17

can significantly contribute to the social, economic and cultural well-being of people and communities, the risk of the transmission of harmful aquatic organisms, including micro-organisms capable of causing diseases, can pose a significant threat to the economic value of aquaculture as well as the surrounding environment. However, some activities in the coastal marine area, such as the movement of aquaculture stock and equipment, may also hasten or exacerbate the spread of harmful aquatic organisms if not appropriately managed. Marine farms can also provide ideal habitats for some diseases or biofouling species (e.g. sea squirts such as *styela clava*) to establish. Hence it is important that the provisions of the plan manage the risks associated with harmful aquatic organisms on structures (fixed and moveable).

24. Policy 28 of the Proposed Plan recognises the risks of introducing harmful aquatic organisms associated with aquaculture activities, including the introduction of structures and the relocation of equipment and stock.
25. Policy 28 also recognises the risks associated with the introduction of any structures or installations and maintenance activities (including hull cleaning) of structures, moveable objects and ships. Policy 28 does not refer to the risks of introducing harmful aquatic organisms in discharges or disposal dredging, however, Policy 43 of the Proposed Plan, regarding Port Dredging, recognises that contaminated dredge spoil needs to be managed in terms of location of: deposition; minimising dispersal; and avoiding, remedying and mitigating adverse environmental effects.
26. Effectively managing discharges associated with biofouling cleaning also assists in giving effect to NZCPS Policy 11 (Indigenous biodiversity) and Policy 13 (Preservation of natural character). Effective management of activities that could cause the release or spread of harmful aquatic organisms is a key step in protecting New Zealand's indigenous biodiversity and reducing the risk of irreversible changes to the natural character of the coastal environment. The release or spread of harmful aquatic organisms could alter natural elements and processes and the biophysical and ecological characteristics of the coastal environment.

27. NZCPS Policy 23 – Discharge of contaminants, seeks to manage discharges to the coastal environment generally in Policy 23(1) and specifically from ports and other marine facilities in Policy 23(5). In-water cleaning of a vessel’s hull and niche areas will involve a discharge of biological material, which the *Cleaning of biofouling* rules in the Proposed Plan seek to control. In-water cleaning to manage harmful aquatic organisms could also involve the discharge of a contaminant either from the anti-fouling coating particularly if it is ablative⁹, or other debris such as anti-fouling paint flakes. Proposed Rule 9 recognises the risk of discharging both biological and chemical contaminants (such as from ablative coatings). The conditions of Rule 9, seek to manage the potential adverse effects of such discharges as follows:

- a. Condition (a) requires the cleaning method to be in accordance with the paint manufacturer recommendations, which will be methods that will not damage the anti-fouling coating.
- b. Condition (d) limits the level of fouling that can be cleaned to Level of Fouling (LOF) 2 – this is essentially microfouling with a very small coverage of macrofouling, which can be cleaned by wiping, thereby minimising the release of chemicals from anti-fouling coatings.
- c. Condition (e) requires capture of biological material to 50 microns and removal from the coastal marine area.

Key developments in approaches to vessel bio fouling

28. NZCPS Policy 12 has a significant cross-over with MPI’s role in marine biosecurity and the provisions of the Biosecurity Act 1993. Since the gazettal of the NZCPS in 2010 there have been a number of key developments in

⁹ Ablative coatings include a biocide which is a chemical substance (i.e. copper compounds) to prevent the settlement or survival of aquatic organisms. Ablative coatings will have a soluble matrix that slowly dissolves to release the biocide.

international, domestic and regional approaches to managing the risks from vessel biofouling. In particular:

- i. In July 2011 the International Maritime Organisation (IMO) adopted the *Guidelines for the control and management of ships' biofouling to minimize the transfer of invasive aquatic species*. The IMO guidelines 2011 are intended to provide a globally consistent approach to the management of biofouling.
 - ii. The Biosecurity Act 1993 was amended in 2012 to provide new tools for the management of biofouling, including the ability to write Craft Risk Management Standards and Pathway Management Plans. The *Craft Risk Management Standard – Biofouling* (CRMS) was released in April 2014 (at which time MPI encouraged voluntary compliance) and it took effect on the 15th of May 2018, requiring mandatory compliance.¹⁰
 - iii. The *ANZECC Code of Practice for Anti-fouling and In-water Cleaning* 1997 was jointly reviewed and replaced by MPI and the Australian Department of Agriculture Fisheries and Forestry with the *Guidelines for Anti-fouling and In-water Cleaning* June 2013 (Appendix 1).
29. All of these developments recognise the risks of introducing harmful aquatic organisms via vessel biofouling and present a shift in what is good practice to manage vessel biofouling. In brief, they recognise that anti-fouling coatings on their own are not sufficient and regular maintenance is required to keep the growth of biofouling to a minimum - ideally to microfouling only. This is a significant shift in approach to that in the 1997 ANZECC Code of Practice, which the Council would have had regard to when preparing its first regional coastal plan. The 1997 ANZECC Code of Practice discouraged in-water cleaning because of the risk of introducing harmful aquatic organisms and the potential discharge of contaminants from anti-fouling coatings. The IMO Guidelines 2011, however, state:

¹⁰ Craft Risk Management Standard – Biofouling on vessels arriving to New Zealand (15 May 2014) MPI.

“To minimize the transfer of invasive aquatic species, a ship should implement biofouling management practices, including the use of anti-fouling systems and other operational management practices to reduce the development of biofouling. The intent of such practices is to keep the ship’s submerged surfaces, and internal seawater cooling systems, as free of biofouling as possible. A ship following this guidance and minimizing macrofouling would have a reduced potential for transferring invasive aquatic species via biofouling¹¹.”

30. The Council’s Section 32 Report notes the Council’s intention to be consistent with the *Guidelines for Anti-fouling and In-water Cleaning* June 2013 (Appendix 1). Further to a pre-hearing meeting between DOC, MPI and the Council, the Section 42A Report recommends further changes to Policy 28 and Rules 9 and 10 achieve better consistency with those Guidelines. I am very supportive of those changes but seek some further minor changes as set out below in my response to the Section 42A report.

Guidelines for Anti-Fouling and In-Water Cleaning June 2013

31. The purpose of the June 2013 Guidelines (Appendix 1), which were jointly prepared by Australia’s Department of Agriculture Fisheries and Forestry and New Zealand’s Ministry for Primary Industries, and are endorsed by MPI as best practice, is to:

“...provide guidance on best-practice approaches for the application, maintenance, removal and disposal of anti-fouling coatings and the management of biofouling and invasive aquatic species on vessels and movable structures in Australia and New Zealand. These guidelines are also intended to assist authorities to decide on the appropriateness of in-water cleaning operations in general and on a case-by-case basis. In achieving this purpose, it is the aim of the guidelines to minimise contamination and biosecurity risks associated with shore-based and in-water maintenance of vessels and movable structures¹².”

32. The Guidelines are divided into two parts¹³:

“Part 1: Best practice guidance for the application, maintenance, removal and disposal of anti-fouling coatings at shore-based maintenance facilities to minimise environmental risk.

¹¹ IMO Guidelines 2011, paragraph 4.2, page 5.

¹² The Guidelines, page 7

¹³ The Guidelines, page 2

Part 2: Best practice guidance for in-water cleaning and maintenance of vessels and movable structures to minimise environmental risk.”

33. Part 2 of the Guidelines is of most relevance to regional councils and unitary authorities with respect to the coastal marine area. Part 2 consists of two sections:
- a. Section A: Information on the factors that determine the environmental risk of in-water cleaning.
 - b. Section B: Specific guidance on situations where in-water cleaning may be acceptable and any conditions that may apply¹⁴.
34. The Guidelines also include the following appendices of relevant supporting information:
- i. **Appendix 1:** A decision support tool to determine the appropriateness of in-water cleaning in specific circumstances.
 - ii. **Appendix 2:** Information on the types of anti-fouling coating commercially available and the means by which they prevent biofouling growth.
 - iii. **Appendix 3:** Information on currently available in-water cleaning techniques.
 - iv. **Appendix 4:** A template for a Biofouling Management Plan and a Biofouling Record Book developed by the International Maritime Organization.
 - v. **Appendix 5:** Information on how to identify different biofouling types on vessels and movable structures.

How adopting the guidelines is consistent with NZCPS Policy 12

¹⁴ The Guidelines, page 10

35. The aim of the Guidelines is to minimise contamination and biosecurity risks associated with shore-based and in-water maintenance of vessels and movable structures, which aligns with NZCPS Policy 12. Consistency with the Guidelines in regional coastal plan provisions to manage harmful aquatic organisms is, in my opinion, a way to adequately give effect to NZCPS Policy 12.
36. The Guidelines are not a statutory document. They are, however, current best practice and are endorsed as such by the Australian and New Zealand Governments. They are also aligned with international conventions intended to protect the aquatic environment from invasive aquatic species and contaminants from shipping¹⁵ and align with New Zealand's national biofouling management approach.
37. I consider that the Proposed Plan provisions in Policy 28 and Rules 9 and 10, amended as recommended by the Section 42A Report, give effect to NZCPS Policy 12. I am appearing in support of the recommendations in the Section 42A Report. However, I recommend a small number of further changes to the rule as set out next.

Comment on Section 42A Report – Cleaning of biofouling

38. The following paragraphs outline where I support the Officers Section 42A recommended amendments and where I seek further changes, in relation to: Policy 28; Rules 9 and 10, and two definitions.

Policy 28

39. I support the Officers recommended changes to Policy 28. This includes the relief sought by the Minister of Conservation that the words “and scraping” be

¹⁵ The International convention on the control of harmful anti-fouling systems on ships

The 1996 protocol to the Convention on the prevention of marine pollution by dumping of wastes and other matter, 1972

The 2011 Guidelines for the control and management of ships' biofouling to minimize the transfer of invasive aquatic species.

The Guidelines, page 1

deleted from Policy 28(a). Scraping is a method that should not be used with many types of anti-fouling coatings. I also support the change requested by other submitters that the word “will” be changed to “must”.

Rule 9

40. While I strongly support the Officer’s recommended changes to Rule 9, I question the adequacy of condition (c) and the appropriateness of having rule requirements in a footnote (Footnote 4). The relief requested by both DOC and MPI for this condition is for condition (c) to be worded as follows:

“if any person undertaking or responsible for the cleaning, suspects that harmful or unusual aquatic species (including species designated as unwanted organisms or pest species under the Biosecurity Act 1993) are present on the ship, structure or navigational aid, that person shall take the following steps:

- i. any cleaning activities commenced shall cease immediately, and
- ii. the Taranaki District Council and the Ministry for Primary Industries shall be notified without unreasonable delay: and
- iii. the cleaning may not recommence until notified by the Council to do so, or in the event a designated unwanted organisms or pest species is found, notified to do so by the Ministry for Primary Industries.”

41. I seek that condition (c) be amended to include all elements as sought by DOC and MPI, as set out above in the body of the rule rather than in a footnote, for clarity and enforceability. The condition as recommended in the Section 42A Report does not give the Council ability to take any action if a suspected harmful or unusual aquatic organism is found. For example, require that a suspected harmful or unusual aquatic species be identified by a taxonomic expert.

Rule 10

42. I support Rule 10 recommended by the Section 42A Report, specifically the removal of the words “Sampling, scraping and/or” from the activity description.

Definitions: Microfoul and Macrofoul

43. Both DOC and MPI submissions sought the inclusion of the terms “Microfouling” and “Macrofouling” in the definitions section of the Proposed Plan. While these terms have been included and with the definitions sought by both agencies, the Section 42A report has changed the terms to “Microfoul” and “Macrofoul”.
44. The terms “microfoul” and “macrofoul” are not used in any of the Guidelines or research papers referenced. A google search of the terms “microfoul” or “macrofoul” does not find anything of relevance. Most importantly, Rule 9 refers to “microfouling” and “macrofouling”, not “microfoul” or “macrofoul”.
45. While this could be considered a minor detail, I recommend the terms “microfoul” and “macrofoul” be changed to “Microfouling” and “Macrofouling”. This is a minor correction but would achieve consistency with the terms in Rule 9, in the guidelines and relevant research papers, and minimise the risk of any interpretation errors.

Conclusion

46. As discussed in my evidence above, there has been a shift in international and domestic approaches (statutory and non-statutory) for reducing the risks of introducing and/or spreading harmful aquatic organisms.
47. The Guidelines 2013 produced by the Australian and New Zealand Governments present current best practice. I believe that Policy 28 and Rules 9 and 10 as amended in the Section 42A Report largely give effect to the recommendations in those Guidelines, and in doing so give effect to the NZCPS, particularly Policy 12.
48. However, I do consider the further amendments to condition (c) and the terms “microfoul” and “macrofoul” in the definitions, as set out above, are necessary for certainty and enforceability of the Rule 9.

A handwritten signature in blue ink, appearing to read 'S. Hucker', with a stylized flourish extending to the right.

Anti-fouling and in-water cleaning guidelines

Introduction

The growth and accumulation of aquatic organisms (biofouling) on vessels and other movable submerged structures affects their performance and can lead to the spread of invasive aquatic species. Anti-fouling coatings are commonly used to protect submerged surfaces and prevent biofouling accumulation. Application, maintenance and removal of anti-fouling coatings on vessels and movable structures in maintenance facilities or in-water can result in contamination of the aquatic environment. Accidental release of biofouling organisms during cleaning operations can facilitate the spread of invasive aquatic species threatening human health, the aquatic environment, and social, cultural and economic values.

Purpose and principles

These guidelines provide guidance on best-practice approaches for the application, maintenance, removal and disposal of anti-fouling coatings and the management of biofouling and invasive aquatic species on vessels and movable structures in Australia and New Zealand. These guidelines are also intended to assist authorities to decide on the appropriateness of in-water cleaning operations in general and on a case-by-case basis. In achieving this purpose, it is the aim of the guidelines to minimise contamination and biosecurity risks associated with shore-based and in-water maintenance of vessels and movable structures.

These guidelines are based upon the following principles:

- The risks posed by biofouling management measures should be balanced with the risks of failing to manage biofouling.
- There is an operational need to manage biofouling on vessels and movable structures.
- It is preferable to minimise the accumulation of biofouling on vessels and movable structures.
- It is preferable for biofouling to be removed in the location where it was acquired before departing or moving to a new location.
- Release of potentially toxic chemicals and invasive aquatic species into the environment should be minimised.
- Where operationally and economically practicable, vessels and movable structures should be removed from the water for cleaning and maintenance, in preference to in-water operations.

Scope

These guidelines apply to all vessels and other movable structures in aquatic (marine, estuarine and freshwater) environments, regardless of whether they are coated in an anti-fouling coating. These guidelines should be used by resource managers, owners and operators of vessels and movable structures, operators and customers of maintenance facilities and contractors providing vessel maintenance services.

These guidelines replace the *ANZECC Code of practice for anti-fouling and in-water hull cleaning and maintenance* (1997).

The practices described in these guidelines have been aligned with international conventions intended to protect the aquatic environment from invasive aquatic species and contaminants from shipping. These include:

- the *International convention on the control of harmful anti-fouling systems on ships*
- the *1996 protocol to the Convention on the prevention of marine pollution by dumping of wastes and other matter, 1972*
- the *2011 Guidelines for the control and management of ships' biofouling to minimize the transfer of invasive aquatic species*.

These guidelines are consistent with both countries' developing national biofouling management approaches.

Occupational health and safety should always be a principal concern in vessel maintenance. These guidelines do not specify detailed occupational health and safety requirements. Such information can be found on relevant government websites as linked in the section on Application of the Guidelines.

Structure of these guidelines

These guidelines are divided into two main parts:

- **Part 1:** Best practice guidance for the application, maintenance, removal and disposal of anti-fouling coatings at shore-based maintenance facilities to minimise environmental risk.
- **Part 2:** Best practice guidance for in-water cleaning and maintenance of vessels and movable structures to minimise environmental risk.

Relevant supporting information is provided in:

- **Appendix 1:** A decision support tool to determine the appropriateness of in-water cleaning in specific circumstances.
- **Appendix 2:** Information on the types of anti-fouling coating commercially available and the means by which they prevent biofouling growth.
- **Appendix 3:** Information on currently available in-water cleaning techniques.
- **Appendix 4:** A template for a Biofouling Management Plan and a Biofouling Record Book developed by the International Maritime Organization.
- **Appendix 5:** Information on how to identify different biofouling types on vessels and movable structures.

Definitions

For the purposes of these guidelines the following definitions apply.

Adequate documentation	Records of the recent history of anti-fouling installation and hull maintenance undertaken on a vessel or movable structure.
Anti-fouling coating	A coating applied to submerged surfaces to prevent or reduce accumulation of biofouling. Common types of anti-fouling coating are described in Appendix 2.
Anti-fouling coating system	The combination of all component coatings, surface treatments (including primer, sealer, binder, anti-corrosive and anti-fouling coatings) or other surface treatments, used on a ship to control or prevent attachment of unwanted aquatic organisms.
AFS Convention, 2001	International Convention on Control of Harmful Anti-Fouling Systems on Ships, 2001.
AFS Certificate	An International Anti-Fouling System Certificate that vessels greater than 400 gross tonnes and registered to a Flag State that is a Party to the <i>International convention on the control of harmful anti-fouling systems on ships</i> are required to carry. This certificate indicates that the vessel's anti-fouling system complies with the convention.
Australian or New Zealand waters	Internal waters, the Territorial Sea and the Exclusive Economic Zone (EEZ) of Australia or New Zealand.
Biocide	A chemical substance incorporated into anti-fouling coatings to prevent settlement or survival of aquatic organisms.
Biofouling	Accumulation of aquatic organisms (micro-organisms, plants and animals) on surfaces and structures immersed in or exposed to the aquatic environment.
Biofouling type	The level and composition of biofouling that accumulates on submerged surfaces over time. These guidelines distinguish between two types of biofouling (see Appendix 5).
Biogeography	The association of species or species assemblages with location. The combination of physical features, such as rocky reefs, and constraints on species dispersal can generate assemblages that can be identified as characteristic of a specific location.
Biosecurity	The exclusion, eradication or effective management of pests and diseases that threaten the economy, environment, human health, social and cultural values.
Biosecurity risk	The potential harm to the economy, environment, human health and social and cultural values posed by pests and diseases entering, emerging, establishing or spreading in Australia and/or New Zealand.
Contaminant	Any undesirable substance occurring in the environment as a result of human activities, even without adverse effects being observed.
Contamination	The presence of a contaminant in the environment, or the process whereby a contaminant is introduced into the environment.
Controlled waste	Material or liquid waste that is regulated because of its toxicity or imminent hazardous nature.
Declaration on Anti-fouling System	The declaration required to be carried by vessels of less than 400 gross tonnes but greater than 24 metres, and registered to a Flag State that is Party to the <i>International convention on the control of harmful anti-fouling systems on ships</i> . This declaration ensures their anti-fouling coating system complies with the convention.

Exclusive Economic Zone	Those waters beyond the limits of the Territorial Sea out to 200 nautical miles.
Emergency situation	An event, actual or imminent, which endangers or threatens to endanger life, property or the environment and which requires a significant coordinated response.
In-water cleaning	The physical removal of biofouling and/or anti-fouling coating surface deposits from submerged surfaces. For the purposes of these guidelines, 'in-water' refers to the parts of a vessel or movable structure that are either below the load line or normally submerged and/or are coated in anti-fouling coating.
Local water quality standards	The concentrations or discharge of contaminants (such as those arising from hull maintenance operations) regarded as acceptable by the relevant authority.
Maintenance facility	Any location or facility where on-shore maintenance of vessels or other movable structures is carried out. This includes maintenance, removal and application of anti-fouling coatings and removal of biofouling organisms.
Marine Growth Prevention System (MGPS)	An anti-fouling system used to prevent biofouling accumulation in internal seawater systems and sea chests; can include use of anodes, injection systems and electrolysis.
Movable structure	A structure or installation deployed in aquatic environments that can be moved between locations. Movable structures include (but are not limited to) oil and other exploration rigs, floating dry-docks, pontoons, aquaculture installations, navigational structures. The cleaning and movement of aquaculture stock falls outside the scope of these guidelines and should be covered in industry codes of practice or similar documents.
Niche areas	Areas on a vessel or movable structure more susceptible to biofouling accumulation due to different hydrodynamic forces, susceptibility to anti-fouling coating wear or damage or absence of anti-fouling coatings. They include, but are not limited to, waterline, sea chests, bow thrusters, propeller shafts, inlet gratings, jack-up legs, moon pools, bollards, braces and dry-docking support strips.
Planned in-service period	The intended interval (decided at the time of anti-fouling coating application) until the next scheduled application of anti-fouling coating on a vessel or movable structure
Relevant authority	The authority responsible for managing the environmental effects of activities. Refer to section on Application of these Guidelines for further information.
Service life	The period of time an anti-fouling coating system is expected to protect a treated surface from biofouling and/or corrosion if the coatings are applied in accordance with the manufacturer's specifications.
Statement of compliance	A document (and associated evidence) issued by a classification society to vessels greater than 400 gross tonnes that are registered in Flag States not Party to the <i>International convention on the control of harmful anti-fouling systems on ships</i> .
Vessel	Any craft that operates in an aquatic environment be it to transport people or commodities, to carry out maintenance or provide a platform for other activities (such as recreational, fishing, cruise, merchant, exploration, research or naval vessels and barges and other vessel types).

Part 1: Shore-based application, maintenance, removal and disposal of anti-fouling coatings

A. Anti-fouling coating types

A wide range of anti-fouling coatings are available for owners and operators of vessels and movable structures. For simplicity, these guidelines group anti-fouling coatings into two main categories, based on whether they rely on release of biocidal (toxic) compounds to prevent biofouling (see Appendix 2).

- **Biocidal coatings** release chemicals such as copper compounds that aim to prevent settlement or survival of aquatic organisms.
- **Biocide-free coatings** do not depend on chemicals or pesticides for their anti-fouling properties, instead relying on their physical nature.

Both biocidal and biocide-free anti-fouling coatings may contain harmful substances that pose a contamination risk if released into the environment.

All biocidal anti-fouling coatings must be registered and permitted for use as an 'anti-foulant' by the Australian Pesticides and Veterinary Medicines Authority in Australia or the Environmental Protection Authority in New Zealand before they can be applied in that country. Sale and application of unregistered biocidal coatings is prohibited in Australia and New Zealand, as is the addition of any biocidal additive to an anti-fouling coating.

The sale and application of anti-fouling coatings containing tributyltin are prohibited in Australia and New Zealand. However, Australian and New Zealand maintenance facilities may still carry out maintenance on vessels and movable structures that have tributyltin-based anti-fouling coatings beneath barrier coats and compliant anti-fouling coatings, provided the facilities are able to contain waste produced during maintenance and minimise release of contaminants.

Material Safety Data Sheets and relevant product descriptions should be consulted for advice and information on correct storage, handling and emergency treatment procedures for all anti-fouling coatings and chemicals.

Application, maintenance, removal and disposal of anti-fouling coatings should only be carried out at maintenance facilities that have adopted measures to ensure all biofouling, coatings and other physical contaminants removed from vessels and structures are retained and treated in a manner that is compliant with relevant local regulations. It is the responsibility of the person carrying out the maintenance to check all necessary approvals are in place and that they are familiar with all conditions specified in such approvals.

B. Choosing the correct anti-fouling coating

Different anti-fouling coatings are designed and developed with different uses in mind. It is essential, therefore, that the person buying and/or applying a coating obtains appropriate technical advice, generally from the coating manufacturer or supplier, before choosing an anti-fouling coating. Application of an inappropriate anti-fouling coating may result in increased and unnecessary accumulation of biofouling, increased loadings of biocide in the environment, or a requirement for more frequent maintenance.

The following factors should be considered when choosing an anti-fouling coating system:

- The activity profile of the vessel or movable structure—different anti-fouling coatings are designed to optimise anti-fouling performance for specific speeds, aquatic environments or levels of activity.
- Planned in-service periods before coating system renewal—different coating types and film thicknesses have different service lives that must be matched with planned maintenance and reapplication.
- Design and construction of the vessel or movable structure—the coating must be compatible with construction materials and use of specific coatings in niche or high and low water flow areas should be considered.
- Any legal requirements for the sale and use of anti-fouling coatings.

Planned in-service period

The anti-fouling coating manufacturer and/or commercial applicator should be consulted when choosing an anti-fouling coating to ensure it is capable of meeting or exceeding the planned in-service period. Anti-fouling coatings that are older than the planned in-service period may not provide adequate protection from biofouling.

For commercial vessels and structures, the type and thickness of anti-fouling coatings (in particular for self-polishing systems) are generally determined by the planned in-service period and operational profile. The planned in-service period is determined by logistic and economic factors, and should be recorded in the vessel's Biofouling Management Plan.

For recreational vessels, the maintenance schedule is not usually determined by operational forecasts and logistical constraints, and anti-fouling coatings are chosen according to other factors. Based on recommended service lives of currently available anti-fouling coatings, the following in-service periods are recommended: 12 months for biocidal anti-fouling coatings and 24 months for biocide-free coatings.

Record-keeping

Records should be kept of anti-fouling coatings chosen and applied.

For **commercial vessels and structures**, the preferred form of documentation of anti-fouling coating type and age is:

- a biofouling record book and/or biofouling management plan (see Appendix 4), or
- an anti-fouling system certificate or declaration on anti-fouling system, or
- original receipts or invoices stating the coating type and the volume purchased; vessel name and date of application, where the former documents are not held.

For **recreational vessels**, the preferred form of documentation is:

- a biofouling record book and/or biofouling management plan (see Appendix 4), or
- original receipts or invoices stating the coating type and the volume purchased, vessel name (if possible) and date of application, where the former document(s) are not held.

C. Requirements for shore-based maintenance facilities

Operators of shore-based maintenance facilities should:

- be familiar with best-practice recommendations set out in these guidelines for application, maintenance and removal of anti-fouling coatings and ensure that all customers are similarly informed.
- adopt measures to ensure biofouling waste, coating waste and other contaminants arising during maintenance activities are captured and retained in a manner that minimises their release into the terrestrial and aquatic environment.

Shore-based maintenance facilities should have:

- Clearly designated areas where maintenance activities producing debris are isolated from the environment. Facilities that enable customers to undertake maintenance on their own vessel or movable structure (that is, non-professional maintenance) should ensure sufficient information on how to prevent any discharges is provided.
- Clear operational rules that facility operators should ensure are followed, by supervising non-professional maintenance activities, as appropriate.

Coating and biofouling waste should be disposed of as controlled waste and the method of disposal should comply with relevant local regulations.

D. Application of Anti-fouling Coatings

General guidance

The manner in which an anti-fouling coating is applied influences its performance. Reduced performance will result in a need for more frequent maintenance. To achieve optimum performance, the following is strongly recommended:

- Technical advice regarding the correct surface preparation, application and curing time required for maximum performance of the anti-fouling coating should be sought from the manufacturer prior to

applying the coating. All elements vary according to the type and brand of coating used and will affect performance.

- All anodes, sensitive fittings and sensors should be removed or heavily taped before application to avoid physical damage.
- Any primers and/or anti-corrosive coatings used must be compatible with the type of anti-fouling coating and appropriately applied to ensure optimal coating adhesion and distribution. Specialist or manufacturer's advice should be sought before new anti-fouling coating is applied over existing anti-fouling coating to ensure the coatings are compatible or that appropriate barrier coatings are used.
- It is important that the manufacturer's recommended coating film thickness be achieved to help ensure that the coating provides the expected service life.
- The manufacturer's recommended method of application must be followed to achieve optimal results. Use of non-approved techniques will compromise the anti-fouling and corrosion protection, and the service life of the coating system. Spray application of anti-fouling coatings achieves the best coating adhesion, surface consistency and smoothness. Where spray application is not possible, practical specialist advice should be sought about other application methods.
- Hull locations prone to high water flow and wear (e.g. exposed edges around bilge keels, intake grates and weld joints) should be coated with suitably durable anti-fouling coatings to the specified coating thickness. Housings, recesses and retractable fittings such as stabilizers, thruster bodies and guards should all be coated with a suitable anti-fouling coating.
- The position of docking blocks, slings, and other structures used to support vessels or movable structures during out of water maintenance should, where possible, be varied each time new coatings are applied. This ensures that areas under the docking blocks are coated with anti-fouling, at least at alternate dockings.

Specific guidance for professionals

- A work area should be used that is designed to minimise discharge of any contaminant into the environment, whether through run-off or aerosol distribution. This should include full bunding and screening of the work area, where appropriate.
- To prevent aerosols from drifting into neighbouring environments, all work should take place in an area that is protected from windy conditions.
- Clean, appropriate, efficient and well-maintained spray equipment must be used for application to ensure optimal coating thickness and distribution.
- Dedicated spray equipment must be used for silicone-based coatings to prevent silicone cross-contamination.
- All application equipment and containers should be cleaned immediately after use and left-over coatings disposed of in a manner that minimises contamination of the environment and follows local regulations for disposal of controlled waste.
- The relevant occupational health and safety requirements should be adhered to at all times.

Specific guidance for non-professionals

- Wherever possible, anti-fouling coatings should be applied by experienced professionals. However, non-professional application of anti-fouling coatings is common for small vessels, such as recreational yachts and launches or small fishing vessels. Non-professionals should follow manufacturer's recommendations when determining how they intend to apply the anti-fouling coating. The anti-fouling coating industry emphasises that spray application is the preferred method and will achieve the best coating performance. However, spray equipment should only be operated by professionals, or under the supervision of professionals, to ensure optimal application. Spray equipment should never be used outside of screening or other containment to prevent spray drift and contamination of nearby environments and structures.
- Anti-fouling coatings should be mixed (if necessary) in designated areas that are sealed, bunded and well ventilated. Preparation and mixing of anti-fouling coatings must never be carried out in intertidal areas.
- Spills should be cleaned up using absorbent material and any residues should be allowed to dry rather than being washed into the wastewater collection system or aquatic environment.
- Any excess coating, empty coating and thinner containers and other material contaminated with primer, anti-corrosive or anti-fouling coatings should be disposed of as controlled waste. Empty

coating and thinner containers should be allowed to air dry in a well-ventilated area prior to this. Coatings should not be allowed to enter water drains, gutters, sewers or the aquatic environment.

- Contaminants should be captured out of run-off water using permeable tarpaulins, screens or filter cloths.
- The area around maintenance areas should be swept or vacuumed frequently to minimise distribution of debris by wind.
- Contaminants such as coatings, pesticides, thinners, oils, detergents, paint strippers, etc. should be stored in accordance with Material Safety Data Sheets and in a manner that complies with any relevant local regulations.
- Relevant information on handling of, or exposure to coatings, thinners and other materials used during the application process should be obtained from the product label, the manufacturers' websites (such as Material Safety Data Sheets) or the retailer, and adhered to at all times.
- The recommended drying time of the primer and anti-fouling coatings must be observed to achieve optimal adhesion and coating performance. Premature over-coating or submersion will compromise coating adhesion and/or anti-fouling and anti-corrosion performance.

E. Maintenance and removal of anti-fouling coatings

Maintenance by professionals

Various methods are available for removal and maintenance of anti-fouling coatings. Each requires consideration of different factors. In all cases, disposal of removed material should follow the recommendations set out in Section F of these guidelines.

Hydroblasting (also known as hydrojetting, water jetting and water blasting) uses water propelled at high or ultrahigh pressure onto a surface to clean surfaces and remove old coatings. Abrasives are not used. Factors to consider:

- Spray drift created during hydroblasting contains anti-fouling residues. The dispersal of spray drift beyond the working area should be minimised by the use of screening and by avoiding spraying during windy conditions.
- Anti-fouling coatings are toxic and hazardous both to people and the environment. The work area where cleaning is carried out should be isolated and people engaged in the blasting should be completely protected from contact with all wastewater and spray drift.

Abrasive blasting (also known as grit blasting) uses air pressure, water pressure or centrifugal force to propel an abrasive material onto a surface to remove contamination, rust and old paint, and to create surface profile. Common abrasive materials used include sand, steel shot, steel grit, iron grit, copper slag, garnet and aluminium oxide. Dry abrasive blasting uses compressed air to propel the abrasive material. Wet abrasive blasting (slurry blasting) uses a slurry of water and abrasive material (rather than dry abrasive alone) to suppress dust generation. Vacuum blasting has vacuum technology added to dry abrasive blasting to capture used abrasive material and cleaning debris. Factors to consider:

- All anodes, sensitive fittings and sensors should be removed or heavily taped before blasting to avoid physical damage.
- Vacuum blasting is recommended over all other abrasive blasting methods.
- Wet abrasive blasting is preferred over dry blasting, as it creates less toxic dust.
- In the absence of vacuum blasting equipment, abrasive blasting operations should be conducted using one of the following options
 - an abrasive blasting chamber vented to the atmosphere via an effective dust collector or fabric filter, or
 - Ensure that the screening material for outdoor/open-air blasting is tear-resistant, UV-resistant, fire retardant and of suitable material and construction (preferably fully enclosed) to minimise escape of fine dust.
- Dry abrasive blasting should only be carried out in enclosed areas. Water or a proprietary suppressant agent should be used to minimise dust emissions from the work area.

Spot repair or maintenance

If coating removal or maintenance is carried out using small power tools or manual methods, the recommendations for non-professionals (below) should be followed.

Maintenance by non-professionals

These guidelines recognise that maintenance tools available to non-professionals may be different to those available to professionals. Therefore, some additional advice is provided here for non-professionals. In all cases, disposal of removed material should follow the recommendations set out in section F. In addition:

- Wherever feasible, mechanical or manual buffing and scraping should be used as they create debris that are more easily collected particularly when using wet techniques that further reduce the potential for aerial distribution.
- Pressure water blasting and abrasive grit blasting should only be conducted if appropriate screening and containment is available.
- All waste and debris should be collected using tarpaulins or drop-sheets and by avoiding work during windy conditions.
- Removal of coatings by wet sanding or scraping is preferred to chemical paint stripping as it creates less toxic waste material. The use of a heat gun can make coating removal easier on some surfaces. If chemical paint strippers must be used, consider soy-based or water-based products that are less hazardous. In all cases it is recommended that manufacturer's instructions are sought to determine the safest and most appropriate method for removing coatings.

F. Disposal of residues and wastes

To manage biosecurity and contaminant risks associated with shore-based maintenance activities, the following recommendations should be adhered to:

- Any removed material or liquid should not be allowed to enter any body of water or stormwater; and should not come into contact with any land that is below the high-water mark of any tidal body of water.
- All residues, solid coatings, liquid or any other form of waste, including removed biological material and used product containers should be collected and stored for disposal in line with the requirements of the relevant authority.
- Anti-fouling coatings should not be incinerated as this may generate toxic fumes, smoke and gases.

G. Emergency response

It is recommended that all maintenance facilities have an Emergency Response Plan, whether required by regulation or not. This plan should cover responses to spills of coatings and other hazardous substances, release of organisms, and other incidents with potential contamination and/or occupational health and safety risks. If such an emergency occurs, the relevant authority should be notified.

Any coating spillages should be assumed to contain hazardous substances and be disposed of as controlled waste and in accordance with the requirements of the relevant authority.

Spill clean-up equipment, such as absorbent materials, non-toxic dispersants, and booms (physical barriers for containing liquids) should be available for facility users and maintained in good condition. The relevant authority should be contacted for further information on decontamination procedures.

Part 2: In-water cleaning and maintenance

In-water cleaning can manage biofouling to optimise the performance of vessels and other movable structures and to minimise biosecurity risks. However, in-water cleaning can physically damage some anti-fouling coatings, shorten coating service life and release a pulse of biocide into the environment. In-water cleaning can also facilitate release of invasive aquatic pests into the surrounding environment. In-water cleaning should therefore only be undertaken when removal of biofouling does not harm the coating and presents an acceptable biosecurity or contaminant risk.

Although these guidelines recommend the use of in-water cleaning in some circumstances, vessels and movable structures should be removed from the water for cleaning and maintenance in preference to in-water operations, where this is operationally and economically practicable.

In-water cleaning should not be considered a replacement for coating maintenance and renewal at shore-based maintenance facilities.

Part 2 of these guidelines is divided into two sections:

- Section A: Information on the factors that determine the environmental risk of in-water cleaning.
- Section B: Specific guidance on situations where in-water cleaning may be acceptable and any conditions that may apply.

A. Determinants of contamination and biosecurity risk of in-water cleaning

The recommendations about in-water cleaning in these guidelines are made on the basis of the associated contamination and biosecurity risks. Several factors determine these risks and are described below.

Anti-fouling coating type

These guidelines distinguish between anti-fouling coatings that contain toxic biocides and those that do not (see Appendix 2). All types of anti-fouling coating pose a contamination risk during in-water cleaning. This risk is attributed on the basis of the toxicity and/or longevity of many approved biocides and other compounds found in coatings, including those that are biocide-free.

Not all anti-fouling coatings are suitable for in-water cleaning. For some coatings, specific methods need to be used to prevent damage to the coating and its future performance. Information on the suitability of an anti-fouling coating for in-water cleaning and the appropriate cleaning methods should be obtained from the coating manufacturer or retailer at the time of purchase. Cleaning technologies are outlined in Appendix 3.

Record-keeping

Documentation of coating type, date of application, and the planned in-service period of a vessel or movable structure should be kept on record as the relevant authority may need it when considering requests for in-water cleaning. If this information is not available the relevant authority may not be able to grant permission for in-water cleaning.

Examples of suitable systems for keeping and maintaining information on coatings and hull maintenance are the Biofouling Management Plan and the Biofouling Record Book recommended in the *Guidelines for the control and management of ships' biofouling to minimize the transfer of invasive aquatic species*. Templates for these documents are in Appendix 4.
